—Maintains that too often, highly trained, bright mental health professionals, who were chosen for their knowledge of and training in behavior change and the solution of behavior problems, become complaining, overly conservative, and even obstructionist after a period of time in their profession. It is argued that mental health professionals need to take at least as good care of themselves as they do of their clients. When they do not manage their own and each other's behavior well, they are ineffective as change agents for others. Mental health professionals avoid clients in most institutional mental health facilities. Most professionals spend most of their time with other professionals, rather than with clients and patients. The consequences of this avoidance behavior are analyzed. Supervisory management practices are recommended to improve professional performance in mental health facilities.—*Journal abstract.*

(DuPage County Health Dept, Mental Health Services, Wheaton, IL) **Volunteers in mental health: A program model.** *Journal of Community Psychology*, 1975(Oct), Vol 3(4), 380-383.—Discusses a program for recruiting and training volunteers for a community mental health center. Success with volunteers in the friendly visitor and socialization group roles is reported. Intake duties were found unsuitable for volunteer time.

7865. Weiss, Steven L. (U Oklahoma, Health Sciences Ctr) **The clinical psychology intern evaluates the**

training experience. *Professional Psychology*, 1975(Nov), Vol 6(4), 435-441.—Studied the value of a clinical psychology internship from the standpoint of the trainee-turned-professional. Data were obtained from 16 former clinical psychology interns who responded to a survey about current professional activities, the strongest and weakest aspects of the training program, the learning value and relevance of the training experience, and suggestions for improvement. Data are discussed in terms of the joint importance of structured and traditional aspects of the program complemented by opportunities which allow for the individual's personal priorities to unfold. The necessity of a 2-way evaluation process (i.e., trainee to program as well as faculty to program) is stressed as a deterrent to rigidity and stagnation.

7877. Merren, John. **A catalog of college and university learning centers.** *Audiovisual Instruction*, 1975(Nov), Vol 20(9), 15-22.—From a survey of results, 6 categories of postsecondary learning centers are described. Methods used include tutoring; large-group workshops; self-instruction; stimulation; and small-group, computer-assisted, self-paced, audiovisual, individualized, and modular types of instruction.

7878. Mulcahy, Daniel G. (University Coll, Cork, Ireland) **Newman's retreat from a liberal education.** *Irish Journal of Education*, 1973(Sum), Vol 7(1), 11-22.—Argues that the claims made by J. H. Newman about his theory of liberal education are highly inconsistent with philosophical positions taken by him in some of his noneducational writings. This is demonstrated by reference to Newman's distinction between notional apprehension and real apprehension and by examining its implications for the theory of a liberal education. (22 ref)

7879. Parent, Joseph; Forward, John; Canter, Rachelle & Mohling, Judith. (U Colorado) **Interactive effects of teaching strategy and personal locus of control on student performance and satisfaction.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 764-769.—Studied the relationships between personal locus of control (Rotter's Internal-External Control Scale), teaching discipline, student performance, and satisfaction. 54 undergraduates were randomly assigned to 2 teaching conditions. In the high discipline condition, Ss were exposed to a 2-hr "mini-course" on computer programming that adhered to 5 empirically derived dimensions of perceived high discipline. In the low discipline condition, Ss were handed identical computer programming materials and told to proceed at their own pace with no rules. Results show that Ss high on internal locus of control performed better under low discipline conditions, while high external control Ss performed better under high teacher discipline conditions. Vol 44(3), 257-267.—Discusses implications of 14 findings yielded by a 1958-1971 investigation in Newark, New Jersey, of relationships between changes in the structure of public education and changes in involvement of the Black community in that structure. The issue of race in Newark social change is extensively analyzed.—*B. Anthony.*

7882. Reed, Rodney J. (U California, School of Education, Berkeley) **Ethnicity, social class and out-of-school educational opportunities.** *Journal of Negro Education*, 1975(Sum), Vol 44(3), 316-334.—Studied parental knowledge and pupil utilization of out-of-school educational opportunities (OSEO) as these were related to (a) residential proximity, (b) sex, (c) ethnicity, (d) socioeconomic status (SES), and (e) parental attitude toward educational value (PA), for 56% of a random stratified urban sample of 524 northern California public school 8th graders (Asians, Blacks, and Mexican and White Americans). Multi- and univariate analyses of variance and Scheffé contrasts were used with data from structured interviews or mailed questionnaires. Some conclusions were as follows: (a) PA for all SES and ethnic groups was high. (b) Among low-SES Blacks, males exceeded females in parental knowledge of private OSEO. (c) Neither ethnic nor SES groups differed in their proximity to public OSEO, but upper SES groups lived farther from private and semiprivate OSEO. (d) Except for Asians, overall utilization increased with SES. (e) Except for Asians, parental knowledge of OSEO was less related to ethnicity than to SES. (27 ref)—*B. Anthony.*

7900. Brophy, Jere E. et al. (U Texas, Austin) Classroom observation scales: Stability across time and context and relationships with student learning gains. *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 873-881.—Used 12 Classroom Observation Scales developed from prior factor-analytic work by E. Emmer and R. Peck (1973) in a process-product study of 165 2nd- and 3rd-grade teachers' success in producing student learning gains on the Metropolitan Achievement Tests. The scales, which measure general process variables stressed in previous classroom research, showed good stability across years and across contexts within years. However, they did not show the numbers and kinds of relationships with student learning gains expected on the basis of previous research. These unexpected findings are indicative of the effects of pupil characteristics and teaching-learning patterns unique to the early elementary grades which call for different teacher behaviors than those which appear to be optimal at higher grade levels.—*Journal abstract*.

7901. Brown, David G. & Hanger, William S. (Miami U, OH) Pragmatics of faculty self-development. *Educational Record*, 1975(Sum), Vol 56(3), 201-206.—Notes that a challenge to higher education today is to lead the American university in a shift from achieving stability to achieving vitality while maintaining quality and purpose. It is the professional responsibility of faculty members to energize the institutional community; therefore academic leaders must encourage and enable faculty self-development. An extensive list of activities designed to stimulate the faculty member and to strengthen the institution is provided. In general, faculty members are advised to change environments, risk new exposures, alter habitual patterns, and undertake new challenges. 142 specific suggestions are made.—*Journal abstract*.

7938. Leventhal, Les. (U Manitoba, Canada) **Teacher rating forms: Critique and reformulation of previous validation designs.** *Canadian Psychological Review*, 1975(Oct), Vol 16(4), 269-276.—Maintains that typical teacher rating form (TRF) validation studies are adequately designed to determine TRF validity only when it is assessed on the empirical, or criterion-related, validity model. The construct validity model, however, is more appropriate for assessing TRF validity, and this model requires different validation designs. The strongest construct validity design requires random assignment of students to a multisection course, which is not typically done. Where random assignment is impossible, repeated measurements correlational designs (panel designs) are recommended. (French abstract) (28 ref)—*English abstract*

7939. Lindeman, Lynn W. (U Guam, Agana) **Institutional goals and faculty attitudes toward collective negotiations.** *Research in Higher Education*, 1975, Vol 3(3), 205-215.—Investigated the relationship between 300 university faculty members' and 50 administrators' perceptions of institutional goals and functions and faculty attitudes toward collective negotiations. A 70% response rate was obtained, and respondents were divided into 3 groups: administrators and faculty with favorable and unfavorable attitudes toward collective negotiations. The 3 groups were compared on their perception of the importance the institution accorded goals and the emphasis given institutional functions. Findings indicate that faculty with favorable attitudes toward collective negotiations differed significantly from the other groups in their perceptions of the importance the institution accorded goals and functions.—*Journal abstract*

7944. McLaughlin, Gerald W.; Montgomery, James R. & Malpass, Leslie F. (Virginia Polytechnic Inst & State U) **Selected characteristics, roles, goals, and satisfactions of department chairmen in state and land-grant institutions.** *Research in Higher Education*, 1975, Vol 3(3), 243-259.—A survey of 1,198 department chairmen at 38 state and land-grant institutions found that Ss were involved in 3 major roles: academic, administrative, and leadership. The academic role consisted of duties of student involvement and research activities. Chairmen reported high emphasis on concurrent goals but felt frustrated in terms of time to pursue commensurate activities. The administrative role required the majority of time and also contained some of the less desirable duties. In addition, administrative goals were seen as overemphasized. The leadership role involved tasks related to academic personnel and program development. Developing abilities of faculty members and maintaining academic freedom were the 2 most important goals in this role.—*Journal abstract*.

[The role of some personality variables in teacher-candidates' perceptions and evaluations of their own teaching.] (Swed) *Pedagogisk-Psykologiska Problem*, 1975(Oct), No 276, 113 p.—Describes 8 tests of a battery of personality tests administered in a self-confrontation experiment. Results indicate that general personality variables, especially those mirroring an interest in one's own self, play a major role in perception and evaluation of one's own teaching. (3 p ref)—English abstract.

7963. Smart, John C. (Virginia Polytechnic Inst & State U, Office of Institutional Research) **Institutional goal and congruence: A study of student, faculty, and administrator preferences.** *Research in Higher Education*, 1975, Vol 3(3), 285-297. Compared the preferences of 529 students, 232 faculty, and 43 administrators in a public, 4-yr college for 5 types of institutional goals derived from a factor analysis of 47 goal statements developed by E. Gross and P. V. Grambsch (1968). Significant differences were found between groups on all 5 types of institutional goals. Strong congruence was found in the preferred goal orientations of faculty and administrators, however, students had higher scores on student welfare and status orientation factors (e.g., the college's role in society). Overall findings suggest that faculty and administrators are more supportive than students of goals which protect the general well-being of the faculty and their role in the college's governance process, promote the intellectual development of students, and respond to special needs of the immediate geographical area. 1982. Askov, Eunice N. & Greff, Kasper N. (Pennsylvania State U) **Handwriting: Copying versus tracing as the most effective type of practice.** *Journal of Educational Research*, 1975(Nov), Vol 69(3), 96-98.—Kindergartners and 2nd graders were given either copying or tracing practice exercises in teaching them to reproduce 10 shorthand forms from memory. At the end of the 5-wk treatment period, the copying treatment group in both grades achieved significantly higher posttest scores. No significant interaction between treatment condition and grade was found.

1983. Bannister, Robert L. (St Louis U) **A comparative study of extraversion-introversion traits to two instructional methods.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4853-4854.

1984. Barr, Rebecca. (U Chicago, Reading Clinic) **The effect of instruction on pupil reading strategies.** *Reading Research Quarterly*, 1974-1975, Vol 10(4), 555-582.—Word identification responses of 32 1st graders were obtained in December and May of 1st grade and examined in order to infer word identification strategies. Half of the Ss were instructed by a phonics method and half with a sight-word method. The strategies for most Ss could be identified using the criteria established for classification. Strategies of individual children were determined to a significant degree by the class instructional method. Individual strategy deviation from the class method was more common for the phonics than for the sight-word method. Most children who initially formed a strategy that differed from the class instructional emphasis changed their

strategy to accord with the class method and materials by the end of 1st grade. (French & Spanish abstracts) (20 ref)—*Journal abstract*.

(Hebrew Home for the Aged, Riverdale, NY) **Intergenerational contact: Theological and social insights.** *Religious Education*, 1975(Nov-Dec), Vol 70(6), 661-675.—Describes a college course in which 16 single female Roman Catholic students served as volunteers at a Hebrew home for the aged. Pre- and postvolunteer service questionnaires and written case studies provided qualitative effects of the experience on the students, primarily in attitudes toward aging and dying.—*R. D. Kahoe*.

1988. Best, Deborah L.; Smith, Suellen C.; Graves, Deborah J. & Williams, John E. (Wake Forest U) **The modification of racial bias in preschool children.** *Journal of Experimental Child Psychology*, 1975(Oct), Vol 20(2), 193-205.—Conducted 2 experiments to study previous reports of a pro-Euro-American-anti-Afro-American racial bias in preschool children of both races. An attempt to modify this bias using the Preschool Racial Attitude Measure II (PRAM) is reported. Exp I involved 39 Euro- and Afro-American preschool children and employed operant learning principles to modify the bias via a teaching machine procedure which provided reinforcement for pro-Afri/anti-Euro (E+/A-) responses. Following training, Ss showed a reduction in E+/A- bias on a test procedure not associated with the training. Follow-up testing of 30 Ss 1 yr after the posttest revealed a tendency for the E+ bias to be partially reestablished. Exp II involved 70 Euro-American kindergarten children and was concerned with the modification of E+/A- bias via a classroom curriculum procedure and the possible influence of the race of the teacher. The experimental curriculum, designed to develop positive associations to dark-skinned persons and to the colors black and brown, had no effect on E+/A- bias, nor was the race of teacher a variable of significance. (21 ref)—*Journal abstract*.

1992. Bittle, Ronald G. (Anna State Hosp, Behavior Research Lab, IL) **Improving parent-teacher communi-**

cation through recorded telephone messages. *Journal of Educational Research*, 1975(Nov), Vol 69(3), 87-95.—Assessed the effects of a teacher-parent communication system which used a daily recorded telephone message as a communications link between parents and their children's teacher. A class of 21 1st graders served as Ss. A 3-part experiment was conducted to determine (a) if the parents would use such a system, (b) if the use would have any beneficial effects on learning, and (c) if the inclusion of nonacademic information would be of value. The results indicate the system was used extensively, the inclusion of academic information in the daily message resulted in improved academic performance by every S, and families complied with recorded teacher instructions of a nonacademic nature at a much higher rate than they did when these instructions were sent home with the child in memo form alone. (31 ref)—*Journal abstract*.

1993. Branch, Robert C. (U Washington) **The interaction of cognitive style with the instructional variables of sequencing and manipulation to effect achievement of elementary mathematics.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4857.

1994. Britton, Gwyneth E. (Oregon State U) **Danger: State adopted texts may be hazardous to our future.** *Reading Teacher*, 1975(Oct), Vol 29(1), 52-58. Reviewed 244 reading texts to determine the extent to which racial-sex role bias was dominant. It was found that illustrations were frequently cosmetic props to convince parents, teachers, and evaluators that some consideration was being given to the questions of minority and sexism. It is concluded that racism and sexism are being taught in the public schools through reading series and other materials. Children seem to be exposed for many hours each day to materials which suggest that the potential of some minority males and minority females is limited. Until publishers, parents, and teachers become aware of the hazard of promoting racism and sexism through school reading materials and take steps to eliminate it by substantial revision, then condoning and perpetuation of racism and sexism will continue.—*P. D. Leedy*.

1996. Brown, Frank & Dixon, John. (State U New York, Buffalo) **Characteristics of outstanding school programs.** *Journal of Negro Education*, 1975(Sum), Vol 44(3), 345-352.—Describes urban American special school programs judged to be outstanding in terms of student achievement, parental involvement, school mission, goal attainment, and pertinent staff development. Some findings were that special government funding supports most innovative programs, and that success is greater at elementary and secondary levels than in junior high. *B. Anthony*.

1997. Brown, Frank. (State U New York, Buffalo) **Assessment and evaluation of urban schools.** *Journal of Negro Education*, 1978(Sum), Vol 44(3), 337-384.—Argues that assessment and evaluation of urban schools is very poor because input and output variables are poorly defined, and thrust variables related to curriculum and

teaching are largely ignored. It is held that schools are socialization agents, and output variables should therefore include (a) economic and social contributions by the school to the community; (b) student aspiration, discipline, and self-concept; and (c) accurately defined student skills in mathematics and reading. Student, teacher, and school input variables are defined and analyzed. The interpretation of statistically significant findings and the problems of defining and testing reading and mathematical skills are discussed. (19 ref) —B. Anthony.

Reanalyzed a study by G. L. Anderson (1941) which found an interaction of drill and meaningful methods of arithmetic instruction with student ability and achievement. Drill was superior for "overachievers" and meaningful instruction for "underachievers" in 18 4th-grade classrooms. Pretest measures were the Minnesota School Ability Test and the Compass Survey Test. In a

reanalysis to separate between- and within-class components of the outcome on aptitude regression, the Aptitude \times Treatment interaction finding disappeared. An apparent interaction in the between-class analysis was dismissed as unreliable. No interaction was found within classes. The importance of separating class, individual, and individual-within-class interaction effects is discussed.—*Journal abstract*.

8018. Falender, Carol A. & Heber, Rick. (U California, Graduate School of Education, Los Angeles) **Mother-child interaction and participation in a longitudinal intervention program.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 830-836. Studied the effects of the child's participation in longitudinal intervention on the structured mother-child teaching interaction. Comparisons were between 21 Black 40-66 mo old experi-

mental children who were participants in intensive language and cognitive development stimulation from approximately 6 mo of age and their mothers, and 18 control children who were simply periodically tested and their mothers. Significant between-group differences in the children's behavior, task scores, and patterning of interaction were found and, when both mother and child received task instructions, in maternal behavior. Findings provide evidence of feedback effects from the experimental group children to their mothers. (16 ref) —*Journal abstract.*

8021. Fisher, Maurice D.; Blackwell, Laird R.; Garcia, Angela B. & Greene, Jennifer C. (Research Triangle Inst. Ctr for Educational Research & Evaluation, Research Triangle Park, NC) **Effects of student control and choice on engagement in a CAI arithmetic task in a low-income school.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 776-783.—To investigate choice in a computer-assisted instruction (CAI) arithmetic task, 38 4th and 5th graders from a low-income school were assigned to either a choice or a yoked control condition. The choice condition allowed selection of arithmetic problems, while the yoked condition allowed no choices. Choice Ss showed significantly more task engagement. There were 2 distinctive choice patterns, with some Ss consistently choosing the easiest problems and others the most difficult ones. Problem difficulty and engagement were linearly related for all choice subgroups, with engagement highest for the easiest problems and lowest for the most difficult. Choice and yoked Ss differed significantly on 3 behavioral locus of control dimensions (stable-unstable, internal-external, and self-other attributions). While choice may be motivating, for some children it can result in poor academic performance. —*Journal abstract.*

8022. Fox, Barbara & Routh, Donald K. (North Carolina State U, School of Education, Raleigh) **Phonemic analysis and synthesis as word-attack skills.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 70-74.—40 4-yr-olds were randomly assigned either to a group that received phonic blend training or to a group that did not. Half in each group were proficient at segmenting syllables into individual speech sounds. After demonstrating their ability to discriminate among letterlike forms, all Ss were trained to read from left to right, then to associate a different sound with each of the letterlike forms, and finally were given 2 paired-associate lists in which stimuli were pairs of letterlike forms and responses were common English words with a 1:1 letter sound correspondence. Ss proficient at phonemic analysis performed better on both lists. Phonic blend training improved performance on the 2nd list only for Ss proficient at phonemic analysis.—*Journal abstract.*

8034. Grobe, Robert P. & Pettibone, Timothy J. (Dallas Independent School District, TX) **Effect of instructional pace on student attentiveness.** *Journal of Educational Research*, 1975(Dec), Vol 69(4), 131-134.—Conducted an observational study using 42 psychology undergraduates who met twice weekly for 50 min. Behavior was videotaped while lectures were presented at low, moderate, and fast instructional paces as defined by approximate syllabication rates. Videotaped student behavior was quantified, and the resultant data were subjected to multivariate and nonparametric analyses. Results indicate that observation techniques used had sufficient discriminative strength to serve as a sensitive

measure of the dependent variable and that instructional pace affects some aspects of "student attentiveness."—*Journal abstract.*

8057. Kennelly, Kevin & Kinley, Shirley. (North Texas State U) **Perceived contingency of teacher administered reinforcements and academic performance of boys.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 449-453.

Studied 49 male 6th graders to determine the relationships among perceived contingency of teacher administered reinforcements, locus of control (Intellectual Achievement Responsibility Questionnaire), and academic achievement. In general, Ss who perceived their

teachers as contingently punitive to boys were internal in locus of control and performed well on measures of academic achievement (GPA and Iowa Tests of Basic Skills). An internal locus of control was also predictive of academic achievement. Perceived contingency of teacher rewards was not related to locus of control or academic achievement. Results support the identity of learned helplessness and locus of control and the M. E. Seligman et al (1971) theory of learned helplessness.—*Journal abstract*.

Team and theme teaching and interdisciplinary study are emphasized as methods of using urban environments to enhance learning. Five criteria of good urban schools are suggested, successful instances of 5 types of urban schools are described, and the nature of a city is discussed. (23 ref)—B. Anthony.

8061. Landauer, Thomas K. & Ainslie, Kathleen I. Exams and use as preservatives of course-acquired knowledge. *Journal of Educational Research*, 1975(Nov), Vol 69(3), 99-104.—Measured retention of material learned by 55 students in college-style technical courses by a repeated final examination given 1 yr later. Matched groups of Ss also repeated the final examination 6 wks or 6 mo after the end of the courses. The 6-mo group showed almost no loss over the year. The 6-wk group suffered about the same considerable loss as did a control group with no intervening examination. Questionnaire measures indicated that Ss who used over 10% of the examined material in their average monthly work also forgot very little. Course-acquired knowledge can be kept fresh over long periods by small amounts of properly spaced review activities.—*Journal abstract*.

(U California, Santa Barbara) Different problem-solving competencies established in learning computer programming with and without meaningful models. *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 725-734.—In 3 studies, 176 nonprogrammers (undergraduates) learned a computer programming language by a method (model) that emphasized a diagram model of a computer expressed in familiar terms or by a method with no model (nonmodel) and then practiced on exercises and took a posttest. In learning and posttest performance, model Ss performed best on interpretation of programs and on problems requiring looping, while nonmodel Ss excelled on straightforward generation of programs. The model was especially helpful for low ability Ss. Practice in interpretation helped nonmodel Ss most and practice in writing simple programs helped model Ss most. The roles of the model in establishing a meaningful learning set, and of practice on mathemagenic activity, are discussed.—*Journal abstract*.

8088. Powell, Lois; Cameron, Howard K.; Asbury, Charles A. & Johnson, Eugene H. (Howard U, School of Education) **Some characteristics of a special urban educational program.** *Journal of Negro Education*, 1975(Sum), Vol 44(3), 361-367.—Studied program effectiveness and student characteristics for a subsample of 51 and the associated total sample of 40 females and 55 males randomly chosen from the 350 students at a Washington, DC, street academy established to foster the educational and economic welfare of disadvantaged high school dropouts. Instruments used were the MMPI, Personal Orientation Inventory, Revised Beta Examination, Quick Test, Stanford Diagnostic Reading Test, Stanford Diagnostic Arithmetic Test, and a specially constructed questionnaire for obtaining attitudinal and demographic data. Among the findings were the following: (a) Evaluation of the academy program was hampered by lack of student data from the public schools. (b) Academy students had dropped out of public schools involuntarily. (c) Reading scores of males and females, ranked at 50th and 36th percentiles respectively, while a reverse trend occurred for arithmetic. (d) Positive attitudes were related to arithmetic and reading achievement. (e) IQs of academy students ranged from 79 to 140.—B. Anthony.

8091. Rickards, John P. & August, Gerald J. (Purdue U) **Generative underlining strategies in prose recall.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 860-865.—Used 90 undergraduates to compare S-generated vs E-provided underlining of sentences (1/paragraph) that were least or most important to the overall structure of the passage presented. Additionally, some Ss were instructed to underline any 1 sentence in each paragraph, while others were asked simply to read the passage. The former group of readers recalled significantly more nonunderlined material than any other group, thereby suggesting that idiosyncratic assimilation was maximized by this condition. On the other hand, those directed to underline the least important sentences evidenced severely debilitated performance apparently because the task demand associated with this condition was contrary to normal underlining activity. 8100. Seifert, Lynne. Children as music makers. *High/Scope (Annual Report)*, 1975(Aug), Report 1974 75, 6-11. Describes a technique in which music is viewed as a generative process and as a way to sharpen children's thinking skills. The program was developed through the High/Scope Educational Research Foundation, Ypsilanti, Michigan for preschoolers and elementary-age children. It is reported that this approach to music education proved to be an excellent way to develop creativity and reasoning skills in children and a meaningful addition to the cognitively oriented curriculum. J. S. Garnett.
8101. Shaw, Carl N. et al. (U Houston) A comparative study of students in alternative and traditional high schools. *Education*, 1975(Fal), Vol 96(1), 28-35.—Investigated the effects of the alternative school on high school students' attitude toward school, career expectations and aspirations, compared with students attending traditional high schools. Ss were 390 students from 2 alternative high schools and 2 traditional high schools. A 50-item attitude scale was constructed using a Lickert-type procedure; a factor analysis indicated that 14 factors were contained in the scale. These factors were reduced to 5 (attitude toward school, career expectation, career aspiration, career self-esteem, and career risk) by an oblique solution. The comparisons between groups resulted in a significant F-ratio for Factor I for each comparison, but no significant differences on the other 4 except on IV and V which could only be attributable to differences in grade level. Results seem to indicate that the alternative school was having a positive effect on students attending this type of school.—*Journal abstract*.

8106. Stolorow, K. Ann. (State U New York, School of Allied Health Professions, Stony Brook) Objective rules of sequencing applied to instructional material. *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 909-912. Applied objective rules of sequencing to elementary-level instructional material to determine their effect on time, errors made during instruction, and posttest errors. 105 2nd grade pupils participated in the study, which required them to identify nouns, adjectives, and verbs embedded in sentences which were presented in a programmed instruction format. A multivariate analysis of covariance was performed with a 3-level independent factor of sequence type using mental age (Otis Quick-Scoring Mental Ability Test) and pretest performance as covariates. The groups differed significantly, with errors made during instruction and time to complete the programs being most affected by the sequence manipulations. Results are discussed in terms of the application of the rules to various types of instructional material.—*Journal abstract*.
8107. Stranix, Edward L. (Rhodes Middle School, Philadelphia, PA) A Philadelphia school study about attitude in inner city students. *Education*, 1975(Fal), Vol 96(1), 95-100.—Investigated attitudinal changes toward school in inner city students after participating in an experimental action-oriented urban environmental studies program. A total of 60 7th and 8th graders, divided into equal experimental and control groups, received pre- and posttests using the School Mosaic Scale and a teacher-developed cognitive test. Results of the testing show that significant gains were attained by the experimental group in all 7 attitudinal areas tested. The

cognitive test results exhibited no significant differences between the 2 groups.—*Journal abstract.*

8109. Tennyson, Carol L. & Tennyson, Robert D. (U Minnesota) **Instructional objectives: Who needs them? Improving Human Performance Quarterly**, 1975(Spr), Vol 4(1), 12-16.—Reports that the research literature contains conflicting studies about the value of giving instructional objectives to students. Studies suggest that objectives (a) orient students to relevant information, (b) are more effective at the memorization and rule-using level, (c) are more useful in classes with objective content (e.g., mathematics and science), and (d) provide more help to students who are in the low and middle ranges of achievement in grades 3-9. (23 ref)—*Journal abstract.*

8110. Tennyson, Robert D. & Tennyson, Carol L. (U Minnesota, Coll of Education) **Rule acquisition design strategy variables: Degree of instance, divergence, sequence, and instance analysis.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 852-859.—Investigated 3 design strategies directly related to the development of instructional materials for rule learning. Ss were a total of 118 10th graders. In Exp I, the degree of divergence between instances showed that contrasting irrelevant features resulted in better performance than matching irrelevant features. Data from Exp II show that when the 2 contextually similar rules were learned simultaneously, performance was superior to that of Ss who learned the rules successively. When the Ss were provided with an analysis of how a given instance represented application of a grammatical rule, performance was better than without it. Results are discussed in relationship to a prescriptive theory of instruction. (22 ref)—*Journal abstract.*

8111. Tennyson, Robert D.; Steve, Michael W. & Boutwell, Richard C. (U Minnesota, Instructional Systems Lab) **Instance sequence and analysis of instance attribute representation in concept acquisition.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 821-827.—2 experiments with a total of 222 undergraduates tested the assumption that concept acquisition is facilitated by instructional design strategies that focus on the critical attributes of instances. 2 design strategy variables were investigated: (a) sequence, a presentation of instances according to a defined relationship of the stimuli (organized vs random); and (b) analytical explanation, a verbal statement presented with each instance which analyzed the presence or absence of the critical attributes. Results show that organized sequence was more effective than the random. In addition, the groups receiving the analytical explanation material achieved significantly higher mean scores and more efficient acquisition than the groups without it. *Journal abstract.*

(U Texas, Austin) **An evaluation of the effectiveness of three instructional methods in promoting speech sound discrimination and reading achievement with low SES primary grade children identified as having auditory discrimination disabilities.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4590-4591.

8128. Williams, Joanna. (Teachers Coll, Columbia U) **Training children to copy and to discriminate letterlike forms.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 790-795. Assigned 40 Black low socioeconomic status 4- and 5-yr-olds (20 males and 20 females) to 4 training conditions: reproduction (copying), discrimination (matching-to-sample), a combination of reproduction and discrimination, and no-training control. 3 letterlike forms were used in training. Reproduction training improved performance only on the reproduction test; discrimination training improved performance only on the discrimination test. The effects of discrimination training were seen both on forms used in training and on other similar forms, while the effects of reproduction training were seen only on trained forms. Results are interpreted in terms of the specificity of the 2 types of

training. Implications for instruction in reading and writing are noted. (17 ref)—*Journal abstract.*

8138. Benowitz, Martin L. & Busse, Thomas V. (North Central Massacsetts Mental Health Ctr, Fitchburg) **Effects of material incentives on classroom learning over a four week period.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 81-82.—Assessed the effects of

material incentives on the learning of spelling words in typical classrooms over a 4-wk period. 14 4th grade classes with a total of 330 students participated. Seven classes were randomly assigned to a material incentive condition, and 7 to a normal, or social incentive, condition. Classroom means were used as the unit of analysis. Ss who were offered material incentives learned significantly more spelling words than did Ss not offered material rewards. Ss in the material incentive condition learned an average of about 6% new words during each week's lessons; Ss who were offered only social incentives learned an average of about 3 new words during each week. The substantial effects of the material incentives continued throughout the 4 wks.—*Journal abstract*.

8141. Camp, Bonnie W. & Zimet, Sara G. (U Colorado, Medical School, Denver) **Classroom behavior during reading instruction.** *Exceptional Children*, 1975(Oct), Vol 42(2), 109-110.—Compared the behavior observed in 45 1st graders during their reading periods to examine the relationship between poor reading achievement and behavior problems. Ss were divided into high, middle, and low reading groups. Reading instruction consisted of 30 min with the teacher in a small group, 30 min of seat work at individual seats, and 30 min at an assigned interest center. Behaviors which occurred with enough frequency to warrant further analysis included total deviant behavior, no deviant behavior, on task behavior (scored if on task at least 15 out of 20 sec), and total off task behavior (scored for any interruption however brief). Results indicate that instruction for children with less than optimal aptitude in a skill needs to be designed with aids for improving attention and concentration during the earliest learning phase.—*M. E. Pounsel*

8144. Cobb, Patrick R.; Chisom, Brad S. & Davis, Myron W. (University of Southern California) **Relationships among perceptual motor, self concept, and academic measures for children in kindergarten, grades one and two.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 539-546.

Argues that most studies reporting correlations of psychomotor and cognitive measures deal with perceptual-training programs for the remediation of academic deficiencies. The present study provided additional information about the relationships of perceptual motor

ability and academic achievement, including self-concept, for 131 kindergartners and 1st and 2nd graders. A small positive relationship between perceptual-motor ability and academic ability was observed for all 3 grade levels on the 9 tests administered. There was little indication of any significant relationship between self-concept and academic ability, which provides no basis for the hypothesis proposing self-concept as an intervening variable in the relationship between the perceptual-motor and academic areas, at least for such young Ss. 8158. Harrington, Doris V. (St Louis U) **Psychological constructs as predictors of academic achievement: A study of high school minority students in a special setting.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4742-4743.
8159. Hensley, Bonnie L. (U Southern Mississippi) **The relationship of selected oral language, perceptual, demographic, and intellectual factors to the reading achievement of good, average, and poor first grade reading groups.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4562-4563.
8160. Jantz, Richard K. & Sciara, Frank J. (U Maryland) **Does living with a female head-of-household affect the arithmetic achievement of Black fourth-grade pupils?** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 468-472.—Studied the records of 1,073 Black 4th graders, of whom 300 were living with a female head-of-household and 773 with a male head-of-household. No significant differences were found in mean scores between male and female Ss on the Metropolitan Achievement Test. Significant differences were found favoring those Ss living with male heads-of-household, particularly for females and for Ss with Lorge-Thorndike IQs over 100. It is noted that findings should not be considered as simple cause and effect relationships but rather as indicative of potential difficulty for some pupils. (1 p ref)—*Journal abstract*.
8161. Johnson, Patrick B. (Kirkwood Community Coll) **Achievement motivation and self-reported grade point average.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 402-404. Examined the impact of achievement motivation on the accuracy of self-reported grades in 70 high school seniors. The prediction that Ss high in achievement motivation would be more likely to overestimate the degree of their success than low-need achievers was supported.
8162. Kellaghan, Thomas. (St Patrick's Coll, Educational Research Ctr, Dublin, Ireland) **Intelligence and achievement in a disadvantaged population: A cross-lagged panel analysis.** *Irish Journal of Education*, 1973(Sum), Vol 7(1), 23-28. A test of intelligence (Stanford-Binet Intelligence Scale) and a test of achievement (Preschool Inventory) were administered to 59 preschoolers in a disadvantaged area when they were 3 yrs old and again when they were 5. Cross-lagged panel correlations between test performances were positive and substantial but did not differ significantly from each other. Findings do not provide evidence of a preponderance in causality one way or the other in the relationship between intelligence and achievement.—*Journal abstract*.

8169. McDaniel, Ernest D. (Purdue U) **Serial integration and early arithmetic achievement.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 586.—Significant correlations were obtained between a serial integration task and achievement in arithmetic of 1st and 2nd graders. Results are interpreted as supporting the notion that quantitative thinking depends in part on spatial abilities.
8170. McDonagh, Declan. (Inst of Public Administration, Dublin, Ireland) **A survey of reading comprehension in Dublin city schools.** *Irish Journal of Education*, 1973(Sum), Vol 7(1), 5-10.—Studied changes in the average level of attainment in English comprehension of 11-yr-olds in Dublin between 1964 and 1969. No significant difference between the 1964 and 1969 samples was found.
8171. Morris, Thomas L. (U Wyoming) **An experiment in predicting dropouts in one school district.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4755-4756.
8172. Papay, James P.; Costello, Robert J.; Hedl, John J. & Spielberger, Charles D. (Dallas Independent School District, TX) **Effects of trait and state anxiety on the performance of elementary school children in traditional and individualized multiage classrooms.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 840-846. Evaluated anxiety and performance on concrete and abstract criterion referenced mathematics tests for 267 1st and 2nd graders assigned to either individualized multiage programs (IMP) or traditional learning environments (TRAD). The State Trait Anxiety Inventory for Children (STAI-C) was used to measure anxiety. Lower trait and state anxiety was associated with the IMP program, and anxiety reducing effects were greater for 2nd graders. High A-Trait 1st graders performed more poorly than low A-Trait 1st graders. Although IMP 1st graders were lower in A-Trait than TRAD children, they did not differ in performance. For 2nd graders, the IMP environment facilitated the performance of high A-

Trait children, but resulted in poorer performance for low A-Trait children.—*Journal abstract.*

8179. Robbins, Gerold E. & Rogers, Donald E. (Southern Illinois U, Edwardsville) **Dogmatism and study time in high school students: Better to be wrong than long.** *Journal of Educational Research*, 1975(Nov), Vol 69(3), 120-121.—Dogmatic 11th and 12th graders (as determined by the Rokeach Dogmatism Scale) took less time to study, and this adversely affected performance. However, they tended to be more rather than less accurate in estimating their performance. Results are interpreted as a need to escape the situational anxiety created by the decision-making task. Implications for remedial education are discussed.

8180. Rothkopf, E. Z. & Billington, M. J. (Bell Lab. Murray Hill, NJ) **Relevance and similarity of text elements to descriptions of learning goals.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 745-750.—Determined whether similarity between incidental text elements and learning goals influences incidental learning. 192 undergraduates read a 1,010-word passage. A recall test followed. Goal-descriptive directions, provided during reading, differed among 8 experimental treatments in (a) number of assigned goals, (b) number of goals achievable from passage, and (c) resemblance between unachievable goals and certain text segments. Efficiency in goal-relevant learning was reduced by increasing numbers of assigned goals whether or not all goals could be achieved. More incidental learning was found for text segments resembling goals than for dissimilar text.—*Journal abstract.*

(Tempe Union High School District, AZ) **Intra- and intermodal word-recognition cues: A reassuring methodological note.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 603-606.—Administered a matching-to-sample task to 32 male and 32 female 1st graders under 2 intra- and 1 intermodal conditions. The correct response was selected most frequently in all conditions. A 2-factor (sex \times task) analysis of variance with repeated measures on the task factor was performed on the number of correct responses. The interaction was not significant, nor did number correct vary with sex. Number correct did vary with task condition ($p < .001$). Performance was significantly better in the visual-visual condition than in the auditory-auditory, visual-auditory, or auditory-visual conditions. Performance in all 4 was significantly related to reading achievement. The 5 cue types or stimulus alterations were not used differentially within condition. Proportional frequency of reversal-cue choice, as compared to other cues, did not appear to be affected by the change in instructions to include the correct response.—*Journal abstract.*

8189. Warren, David H.; Anooshian, Linda J. & Widawski, Mel H. (U California, Riverside) **Measures of**

visual-auditory integration and their relations to reading achievement in early grades. *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 615-630.—Designed visual-auditory integration tests to represent the tasks that have been found to correlate with reading achievement in the early grades. The battery of tests was administered to 100 1st, 84 2nd, and 110 3rd graders. Several questions were posed: (a) Do tests of integration measure the same underlying ability, or are there separate abilities that are tapped by the various tests? (b) Are the tests correlated with reading because they tap a common integrative ability that is related to reading, or are there several abilities, each related to reading independently of the others? (c) To what extent are the relationships between the integrative abilities and reading separate from the relationship between reading and IQ? Results indicate that there are separate integrative abilities, and analyses showed that several of the integrative measures were correlated with reading independently of the other measures. Several of the measures accounted for significant reading variance beyond that accounted for by IQ tests. Results are discussed in the context of the need to differentiate adequately between various patterns of perceptual weakness in the diagnosis and remediation of perceptually based reading difficulties.—*Journal abstract*.

8205. Chiu, Lian-Hwang. (Indiana U, Kokomo) **The student teacher and discipline problems.** *Journal of Educational Research*, 1975(Oct), Vol 69(2), 69-72.—Used the critical incident technique to study 85 student teachers' perceptions of and acts in dealing with discipline problems ("discipline problem" was not defined to Ss). Ss' behaviors or acts were analyzed and classified into 7 categories: (a) approval, (b) withholding disapproval, (c) threat to withhold approval, (d) disapproval, and (e) ignoring. Results show that 80% of the discipline problems were attributed to pupils' talking and aggressive behaviors, punishment (including withholding of approval) and threat of punishment were utilized to deal with discipline problems in more than

80% of situations; and approval was applied more frequently in effective situations, while disapproval was used more frequently in ineffective situations.—*Journal abstract*.

8206. Danico, Sandra B. (U Florida, Coll of Education, P. K. Yonge Lab School) **Sexual differences in the responses of elementary pupils to their classroom. *Psychology in the Schools*, 1975(Oct), Vol 12(4), 462-467.**—A study with 8-10 yr olds shows that males interacted with significantly more classmates than females and had significantly more friends among those of differing ages or races. Females maintained a tight clique structure. (18 ref)

8207. Darkenwald, Gordon G. (Columbia U, Teachers Coll) **Some effects of the "obvious variable": Teacher's race and holding power with Black adult students. *Sociology of Education*, 1975(Fal), Vol 48(4), 420-431.**—Analyzed data from a questionnaire survey of 1,135 teachers of Black adults in basic education programs in 59 cities. Black teachers were more successful in preventing dropouts and maintaining high attendance than were White teachers. Black teachers, however, placed much greater emphasis on such functional subject matter as consumer and health education. To test the hypothesis that subject matter was partly responsible for differences in holding power, an index of nontraditional subject emphasis was constructed and introduced into the analysis. Results indicate that teachers who scored high on the index were more successful in holding Black students, and that high scoring Black teachers were more effective than high scoring Whites. It is suggested that sociocultural factors in the classroom, particularly factors relating to communication, underlie differential effectiveness.—*Journal abstract*.

8211. Farris, George F. (Massachusetts Inst of Technology) **Chickens, eggs, and productivity in organizations. *Organizational Dynamics*, 1975(Spring), Vol 3(4), 2-15.** Asserts that productivity in organizations is not simply the result of individual and organizational characteristics but their cause as well. Performance feedback loops (including the impact of performance on organizational and individual characteristics) create a need for a dynamic view of organizational behavior. Such a view considers multiple causal relationships among productivity, individual characteristics, organizational characteristics, and external factors, and it treats cycles of events as a central phenomenon of organizational behavior. Such a dynamic view of organizations has several corollaries relevant to managers. Among

them are momentum and inertia of high and low performers, early experience and career plateauing, managing the manager, lagged effects and unintended consequences, attribution theory and misperceived causes, and growth and stagnation of organizations and societies.—*Journal summary*.

8212. Fiedler, Martha L. (U Illinois, Inst for Child Behavior & Development, Champaign-Urbana) **Bidirectionality of influence in classroom interaction. *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 735-744.**—Results of systematic observation of teacher-student interaction in 35 junior and senior high school classrooms indicate that students exert influence over classroom events and that they accurately perceive how much control they have (measured by Koenig and Hess's Origin Climate Questionnaire). In a subsample of classes, students' perceived influence but not their observed influence is positively and significantly related to their academic achievement (Iowa Test of Basic Skills). Thus, the unidirectional model of teacher-to-student influence reflected in previous classroom research is found inadequate to characterize patterns of interaction. (17 ref)—*Journal abstract*.

8213. Forward, John; Wells, Kathleen; Canter, Rachele & Waggoner, Melissa. (U Colorado) **Teacher control strategies and choice of educational objectives among college students. *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 757-763.**—Studied effects of high vs low teacher control strategies on student educational objectives in a quasi-simulation university career game. 60 undergraduates, divided into 2 groups on the basis of scores on A. Mehrabian's measure of achievement motivation, were randomly assigned to high or low teacher control conditions. High-control Ss heard a 20-min lecture on choices available in a university career. Low-control Ss were invited to begin the simulation game immediately and explore alternatives as they proceeded. Results show that high-control Ss made significantly more goal choices for educational efficiency, while low-control Ss made significantly more choices favoring personal and social growth. Individual level of achievement motivation modified these overall results in predicted directions. (20 ref)—*Journal abstract*.

8214. Fry, P. S. (U Calgary, Canada) **Changes in youth's attitudes toward authority: The transition from university to employment. *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 66-74.**—In 3 studies, 3 different samples of graduating male students, drawn from the faculties of engineering, education, and social sciences at a university ($n_s = 70, 70$, and 60, respectively) were tested before and after a period of full-time employment for changes in attitudes toward authority. Differences were reported between students who proceeded to graduate studies and those who entered employment. The hypothesis that negative attitudes would decline and liking and submissive responses would increase for Ss making the transition from university to employment was supported in all 3 studies in which a 1-yr follow-up was conducted. By contrast, students who continued in a university career showed very little decline in critical attitudes. Results are interpreted in the context of the permissiveness of the university environment, and implications for counselor

- functions and counseling concepts are discussed. (23 ref) —*Journal abstract.*

8225. Harris, Mary B. (U New Mexico) **Sex role stereotypes and teacher evaluations.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 751-756.—70 male and 80 female undergraduates read a description of a male or female teacher of engineering or nursing who used an active, masculine or a passive, feminine teaching style. Ratings were made of variables reflecting the teacher's ability and performance, his or her masculinity, and his or her status. Females generally rated the teacher's performance and academic rank higher than did males, and the teacher using the masculine mode of teaching was rated higher in performance, rank, and masculinity than the teacher using the feminine mode. The male teacher was rated as more masculine if he was in engineering rather than nursing. No evidence of perceived discrimination in terms of rewards to male and female teachers was found. —*Journal abstract.*

8227. Heller, Marc S. & White, Mary A. (William Paterson Coll) **Rates of teacher verbal approval and disapproval to higher and lower ability classes.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 796-800. To determine whether teachers' rates of verbal approval and disapproval vary with the ability level of a class, 5 social studies teachers and 5 mathematics teachers were observed teaching both higher ability and lower ability classes in an inner-city junior high school. Teachers emitted more disapprovals in lower ability classes than in higher ability classes, and the extra disapprovals in the former were predominantly of the managerial type (aimed at controlling social behavior). Also, in general, teachers almost never praised pupils for behaving well socially, but they did approve of instructional behaviors more frequently than they disapproved of these behaviors. Both teacher and pupil behaviors are discussed in terms of social learning theory. *Journal abstract.*

8230. Johnson, David W. & Ahlgren, Andrew. (U Minnesota, Coll of Education) **Relationship between student attitudes about cooperation and competition and attitudes toward schooling.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 92-102. Responses to the Minnesota School Affect Assessment made by approximately 2,400 students in grades 2-12 of a midwestern school district were submitted to correlational analyses of relationships between scales measuring attitudes toward cooperation and competition and scales measuring attitudes toward school personnel, motivation

to learn, involvement in learning, self-worth as student, other students, and restraints on student behavior. Attitudes toward cooperation and competition were virtually independent across grades. Cooperativeness was consistently related to a broad range of positive attitudes toward schooling experience at all grade levels. Competitiveness changed its pattern of correlates, showing relationships to several positive attitudes only in high school.—*Journal abstract.*

8234. Kelly, Delos H. (State University Coll New York, Geneseo) **Tracking and its impact upon self-esteem: A neglected dimension.** *Education*, 1975(Fal), Vol 96(1), 2-9.—Past theory and evidence indicate that not only does tracking appear to produce a corroding effect upon a student's self-esteem but further, this eroded self-esteem can give rise to such behavioral outcomes as school failure and delinquency. These notions were tested, using questionnaire data obtained from 1,227 male sophomores attending high schools in the Pacific Northwest. Analyses indicate that, although track position was associated with an erosion of academic self-esteem, this erosion played a relatively minor role in accounting for the outcomes selected for examination. The effect of social class was negligible. (32 ref)—*Journal abstract.*

8236. Klar, Walter H. (U Connecticut) **An inquiry into the knowledge of and attitudes toward the law on the part of public school students in Connecticut.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3692-3693.

8237. Laosa, Luis M.; Swartz, Jon D. & Witzke, Donald B. (U California, Graduate School of Education, Los Angeles) **Cognitive and personality characteristics of high school students as predictors of the way they are rated by their teachers: A longitudinal study.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 866-872.—Studied longitudinally, over 6 yrs, the relationship between students' cognitive and personality characteristics, teacher judgments of students, and academic performance. Ss were 142 Caucasian students age 12 yrs, 8 mo originally and 17 yrs, 8 mo when the study was completed. Measures included teacher ratings of student traits, WISC and WAIS subtests, and the Personality Research Form. Results indicate that teacher ratings of students had differential meaning according to the grade level in which they were obtained. 2 possible explanations of the data are given: (a) in making judgments of students, teachers attend to different trait

configurations of students depending on the degree of evolution of the teacher-student relationship; and (b) findings may be a function of developmental factors in the students. (20 ref)—*Journal abstract.*

8238. Larkin, Ralph W. (Rutgers State U, Newark Coll of Arts & Science) **Social exchange in the elementary school classroom: The problem of teacher legitimization of social power.** *Sociology of Education*, 1975(Fal), Vol 48(4), 400-410.—A study of teacher leadership styles and classroom climates in 75 elementary classrooms showed that teacher task and expressive orientations strongly influenced classroom morale. Teacher power orientation showed strong negative relationships to peer influence and peer group centrality. Classrooms were measured on morale, peer influence, and peer-group centrality. Teacher leadership that used high amounts of task and expressiveness tended to create high morale regardless of use of power, but when the teacher was low on task or expressive dimensions, increased use of power increased the probability of rebellious climates. Teachers scoring low on all 3 dimensions tended to have anomic class climates.—*Journal abstract.*

8244. Marsh, Herbert W.; Fleiner, Howard & Thomas, Christopher S. (Evaluation, Testing & Research, Inc, Venice, CA) **Validity and usefulness of student evaluations of instructional quality.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 833-839.—The average of a total of 720 undergraduates' evaluations for each section of a computer programming course correlated positively with the average of student performance on a standardized final examination. Since alternative explanations were ruled out, results support the validity of the student evaluations. Half of the 18 instructors (feedback) were also given the results of student evaluations conducted during the term. Students in the feedback sections later rated their instructors as better teachers, but performed no better on the standardized final examination. Findings suggest student evaluations are valid measures of instructional quality and provide useful feedback to the instructor.—*Journal abstract.*

8245. Martin, Felix. (Gwinnett County Schools, Lawrenceville, GA) **Internal-external control among pre-delinquent and delinquent middle school pupils.** *Psychology*, 1975(Aug), Vol 12(3), 24-26.—Studied locus-of-control orientation in 43 8th graders (36 male, 7 female), selected as pre-delinquent and delinquent, (i.e., being discipline problems, according to teacher's ratings), using the Nowicki-Strickland Locus of Control Scale for Children. Results indicate the Ss were more external than normal students. This suggests that programs designed to instill an internal locus-of-control orientation will reduce pupil behavior problems. 8248. Meredith, Gerald M. (U Hawaii, Academic Evaluation Office) **Toward a systems approach to student-based ratings of instruction.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 235-246. A system consists of interrelated and interacting components which are employed to function in an integrated fashion to attain predetermined outcomes. The systems view has important implications for planning and evaluation in higher education. The present studies focused on (a) components of a student-based instructional evaluation system and (b) input-output relationships. In Study 1, 46 ratings were obtained from 5,378 university students. Factor analysis yielded 5 identifiable components: instructor impact, efficient course management, interest-attention value, cognitive outcomes, and affective outcomes. In Study 2, 54 ratings were obtained from 7,280 Ss. Factor analysis yielded 6 identifiable components: instructor competence, intimacy, instructional expectations, general instructional outcomes, openness, and interest-attention value. Factor scores were computed and related to 3 output indices (morale, effort, and satisfaction). Findings are discussed in light of efficient classroom management and greater utilization of resources. The mechanistic view is rejected. The systems view has implications for both "hard" and "soft" outcomes of the teaching learning enterprise. (27 ref) *Journal abstract*

8252. Parish, Thomas S.; Maly, John & Shirazi, Annmarie. (Oklahoma State U) **Use of classical conditioning procedures to control aggressive behaviors in children: A preliminary report.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 651-658.—Hypothesized that classical conditioning would reduce children's aggression in the classroom. 25 4th and 5th graders who were shown pictures of aggressive scenes paired with the presentation of negatively evaluated words subsequently displayed significantly fewer aggressive responses than 40 controls who had not experienced these conditioning procedures. A significant Teacher \times Classroom effect was also found, which appeared to be a function of the level of the 3 teachers' permissiveness. Specifically, Ss' aggressive behaviors occurred more frequently in the classrooms where a permissive atmosphere prevailed than in the classroom where a more restrictive atmosphere was maintained. In those classrooms where a permissive atmosphere prevailed, the Ss who were the same sex as their teacher tended to display more aggressive responses than those who were the opposite sex from their teacher. 8256. Richards, Arlene K. & DeCecco, John P. **A study of student perceptions of civic education.** *Journal of Social Issues*, 1975, Vol 31(2), 111-121. Obtained questionnaire data from 6,466 junior and senior high school students concerning their perceptions of high school governance and analyzed them to provide a basis for comparing the ideals with the practice of civic education. Ss' statements about actual incidents involving problems in high school governance are discussed in terms of concepts from political science and psychology. Their statements are considered in terms of participation in decision making, dissent, due process, and equality. Ss' perceptions of other parties to the conflicts and of alternative resolutions to conflict are described, and implications for more effective civic education are given. *Journal abstract*

8257. Richey, Harold W. & Richey, Marjorie H. (U Missouri, School of Education, St Louis) **Applications of Heider's p-o-x balance model to classroom situations.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 473-481. Presents some selected principles of F. Heider's balance theory and expresses the p-o-x model in a theoretical framework for predicting responses to inter-

personal situations in which the participants are in attitudinal agreement or disagreement. Concrete classroom situations are cited in which application of the model provides the basis for suggestions concerned with adaptive patterns of interaction with students.—*Journal abstract.*

8258. Richey, Harold W. (U Missouri, St. Louis) **Role playing and modification of student attitudes.** *Education*, 1975(Fal), Vol 96(1), 24-27.—Cites research which indicates that Ss who are induced to express attitudes opposed to their true opinions will, under some conditions, come to modify their opinions in the direction of what they have said. Suggestions are given for utilizing this principle as a technique for changing maladaptive student attitudes, such as dislike for an important subject.—*Journal abstract.*

8259. Rintoul, Betty E.; Cooper, Alita Y.; Schilmoeller, Kathryn J. & LeBlanc, Judith M. (U Kansas) **The effects of decreased teacher interaction and social primes on verbal peer interaction in a small group of preschool children.** *Child Study Journal*, 1975, Vol 5(3), 115-124.—Investigated the effects of decreasing teacher verbalization as well as increasing the use of social primes on preschoolers' verbal interaction. Verbal peer interaction increased the most when social primes were used and teacher verbalization was infrequent. Verbal peer interaction also increased, but to a lesser degree, when teacher verbalizations were reduced but social primes were not delivered.—*Journal abstract.*

8260. Robinson, Leo A. (Indiana U) **Teacher cognitive complexity and cognitive demands made upon perceived high and low achieving students.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4044-4045.

8261. Rosenthal, Bailie A. (Wayne State U) **An ecological study of free play in the nursery school.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4004-4005.

8262. Roweton, William E. et al. (Madison Coll) **Indices of classroom creativity.** *Child Study Journal*, 1975, Vol 5(3), 151-161.—Measured the interrelationships among 3 creativity assessment procedures: student and teacher ratings of each others' performance, Forms B of the "Just Suppose" and "Incomplete Figures" subtests from Torrance Tests of Creative Thinking, and judges' ratings of student-produced classroom products. Data were obtained from 24 gifted 5th graders. Results indicate that (a) girls were superior to boys on most indices, (b) teacher and students judged artistic and academic creativity similarly, (c) the most pervasive associate of classroom product fluency and elaboration was student-teacher ratings, and (d) performance on the Torrance subtests was not highly indicative of either student ratings or classroom product fluency and elaboration.—*Journal abstract.*

8263. Rubenstein, Gerald; Fisher, Lawrence & Iker, Howard. (U Rochester, Medical School) **Peer observation of student behavior in elementary school classrooms.** *Developmental Psychology*, 1975(Nov), Vol 11(6), 867-868.—Assessed the nature of conceptual schemas used by elementary school children in observing the behavior of peers and compared the dimensions to those derived from teacher observations of similar student

behaviors. Results suggest that while teachers are sensitized to the differences in classroom events reflecting academic achievement and those reflecting conformity to rules, students are more sensitive to phenomena reflecting social behavior.

8264. Rubin, Leonard; Weinstein, Eugene & Farberman, Harvey. (York Coll. City U New York) **Students and the politics of reality.** *Sociology of Education*, 1975(Fal), Vol 48(4), 496-509.—Reports a 1969 study with 64 male undergraduates to determine the processes students use in negotiating for reality. Ss chose between an official and an unofficial definition of a situation. Unexpectedly, there was a strong tendency to accept the official version of reality.

8265. Rutkowski, Kathleen & Domino, George. (Fordham U) **Interrelationship of study skills and personality variables in college students.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 784-789.—Although training in improved study skills is an important function of counseling center personnel, study skills are typically perceived as cognitive skills unrelated to other aspects of functioning. This study was undertaken to determine the relationship of study skills (i.e., study habits and attitudes), as measured by the Survey of Study Habits and Attitudes, to personality variables, as measured by the California Psychological Inventory. Data from 201 freshmen (correlational, contrasted groups, and factor analyses) clearly indicate the complex interdependence of study skills with personality factors and the need to take the latter into consideration.—*Journal abstract.*

8266. Ryan, Joseph F. (U Missouri, Columbia) **The association of teacher-student interpersonal relationship and classroom verbal interaction.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4089-4090.

8267. Scanlon, R. L. (St Patrick's Coll, Educational Research Ctr, Dublin, Ireland) **The perceptual press of classroom constraints.** *Irish Journal of Education*, 1973(Sum), Vol 7(1), 29-39.—Examines the classroom as a place where interpersonal perception occurs, and identifies the teacher's interaction goals. The kinds of pupil information instrumentally relevant to the achievement of these goals are suggested, and questions of category width, level of abstraction, and association of such attributes are considered. Factors likely to cause significant perceptual differences between teachers are outlined. It is concluded that knowledge of teacher-pupil behavior is considerably enhanced by an understanding of how teachers form impressions of their pupils. (24 ref) —*Journal abstract.*

8268. Silbergeld, Sam; Koenig, Gail R. & Manderscheid, Ronald W. (Mental Health Study Ctr, Adelphi, MD) **Classroom psychosocial environment.** *Journal of Educational Research*, 1975(Dec), Vol 69(4), 151-155.—School administrators and teachers recognize the pertinence of perceived, classroom environment for student behavior and achievement. To evaluate this environment, the Class Atmosphere Scale (CAS) assesses quantitatively the perceptions held by teacher and students about their common class milieu. A sample of 30 classes, 6 teachers and 479 students aged 10-17 yrs. provided data to calculate percentile norms for each of the 12 CAS subscales. Further analysis suggested

4 discrete applications of subscale profiles. It is concluded that the CAS can be useful for future basic and applied research on classroom structure and behavior. (21 ref)—*Journal abstract*.

8269. Smith, Maureen B. (Columbia U) **Teacher-pupil questioning and approval/disapproval behavior in elementary social studies.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2290.

8270. Snyder, C. R. & Clair, Mark. (U Kansas) **Effects of expected and obtained grades on teacher evaluation and attribution of performance.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 75-82. 72 college students were randomly assigned to expect that they would perform at either the A, B, or C level on a subsequent exam. Ss then listened to a taped lecture, after which they took an exam on the lecture. Ss were then randomly assigned to believe that they had obtained either an A, B, or C grade. Finally, Ss evaluated the lecturer and indicated the degree to which they attributed their performance to themselves or to the lecturer. There were significant main effects of expected and obtained grades such that the lower the expected grade or the higher the obtained grade the more favorable the teacher evaluation. Ss who obtained an A attributed the causality for their performance most strongly to themselves, while Ss obtaining a C attributed their performance most strongly to the teacher. (33 ref)—*Journal abstract*.

8271. Stanford, Gene H. (U Colorado) **The effect of interaction exercises on the quality of class discussion in junior high schools.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4091.

8272. Steffen, Raymond J. (U Massachusetts) **Identifying and developing the basic skills of friendship building.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3853.

8273. Takeuchi, Stuart M. (U Colorado, Asian American Educational Opportunity Program) **Verbal skills and the Asian American student.** *Journal of Non-White Concerns in Personnel & Guidance*, 1975(Jul), Vol 3(4), 161-168.—Discusses the myth that Asian American students do not have academic problems. The passive behavior of these students should not be unquestioningly encouraged, because such behavior often signifies problems of verbalization resulting from a cycle involving the student's home and cultural background. Tendencies of Asian American students to score lower on verbal than math components of college entrance examinations are noted, and implications regarding career choice, graduate study, and self-direction are made. Freshman level courses especially designed to help develop the verbal skills of these students are described.—*R. Tomasko*.

8274. Thomas, Mark J. (Lakeshore Psychiatric Hosp, Toronto, Canada) **Realism and socioeconomic status (SES) of occupational plans of low SES Black and White male adolescents.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 46-49. Studied 118 low SES Black and White male high school students to clarify certain definitional problems related to the assessment of the occupational plans of low SES youth (using the Vocational Choice Inventory). Vocational choice realism was defined by the extent to which intelligence (Science

Research Associates Pictorial Reasoning Test) corresponded to the intelligence level recommended in the *Dictionary of Occupational Titles* (1965). It was demonstrated that when given the opportunity, the students were able to distinguish between their aspirations and expectations. Further, low SES Blacks were not significantly more unrealistic than Whites in their occupational expectations, and both Blacks and Whites aspired to, preferred, and expected to enter occupations at similar SES levels. Especially with respect to low SES Ss, the importance of distinguishing among different levels of vocational plans on a fantasy-reality continuum is stressed. (23 ref)—*Journal abstract*.

8276. Twine, Derek. (University Coll North Wales, Bangor) **Some effects of the urbanization process on rural schoolchildren.** *Educational Studies*, 1975(Oct), Vol 1(3), 209-217. Previous studies comparing the influences of rural and urban environments on children in school have limited themselves to a straightforward dichotomy of community types, often based on locational factors. This study develops and employs a more meaningful model, a continuum based on life style and social behavior. The application of this model to the educational context reveals new information about the community education relationship—there was a curvilinear rather than a rectilinear relationship between the process of urbanization and attitudes, personality and ability, with a significant effect during the early stages of transition from a traditional rural community type. Classroom relationships were found to be a noteworthy intermediary factor. (33 ref)—*Journal summary*.

8282. Weinstein, Rhona S. (U California, Berkeley) **Reading group membership in first grade: Teacher**

behaviors and pupil experience over time. *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 103-116.

—Examined the implementation of reading groups in 3 1st grade classrooms ($N = 60$) and its effects over the 1st 5 mo of the school year on pupil mobility, on patterns of teacher-child contact as measured by J. E. Brophy and T. L. Good's (1970) dyadic interaction system, and on pupil measures of reading achievement and related factors. Results indicate that relatively fixed membership in reading groups did not emerge until the end of the 1st month of school. Group membership was found to contribute a significant increment of 25% to the prediction of pupil reading achievement at midyear over and above initial readiness differences among the students. Differential teacher feedback favoring members of the highest reading group was not documented. Additional qualitative evidence suggested a reconceptualization concerning the mediation of the expectancy effect. (21 ref)—*Journal abstract*.

8284. Westing, Marilyn B. (Claremont Graduate School, CA) **Class achievement and the background and behavior of teachers.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3719-3720.

8285. Williams, Reed G. & Ware, John E. (Southern Illinois U, Medical School) **Validity of student ratings of instruction under different incentive conditions: A further study of the Dr. Fox effect.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 48-56.—Investigated the validity of student ratings of instruction for different lecturer types. 212 undergraduates were divided into 12 equivalent groups. Groups viewed a lecture that varied in substantive teaching points covered (high, medium, low) and expressiveness of delivery (high, low). Half were offered an incentive to learn before the lecture; the other half after the lecture. Ss then rated lecture effectiveness and completed an achievement test. Higher achievement was associated with more content coverage and before-lecture incentives. Differences in lecture expressiveness did not affect achievement. Student ratings generally reflected inservice and continuing-education programs; differences in content coverage under low-expressiveness conditions, but were not sensitive to variations in content coverage when lectures were high in expressiveness. (20 ref)—*Journal abstract*.

8286. Williams, Trevor. (National Inst of Education, Washington, DC) **Educational ambition: Teachers and students.** *Sociology of Education*, 1975(Fal), Vol 48(4), 432-456.—Investigated a postulated reciprocal relationship between the educational ambitions of students and the expectations held by teachers for students. A causal model was developed to include this reciprocal influence relationship at 3 points in time, corresponding to years 1, 2, and 4 in high school. The model was quantified separately by sex with panel data on approximately 6,000 Canadian high school students. Findings suggest that students influence teachers in this respect to a far greater extent than teachers influence students. In fact, the overall effect of teachers' expectations in the develop-

ment of students' educational ambitions appeared to be minimal. (63 ref)—*Journal abstract*.

(U Southern Mississippi) **A study of the counselor-consultant's role in developing programs for mentally retarded preschool and early elementary level children, based on selected variables in the cognitive, affective, and psychomotor domains.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4744.

8301. Holdridge, Elizabeth A. (Montgomery County Public Schools, Project Bridge, Rockville, MD) **Emotionally disturbed youngsters in a public school.** *Social Work*, 1975(Nov), Vol 20(6), 448-452. —Describes a pilot project in Montgomery County, Maryland, which indicates that youngsters with severe emotional disturbances can be placed successfully in the public schools and in some instances—can even join the regular classes of their peers. The cost per pupil is high but may not be greater than the cost of providing separate educational facilities for these youngsters. This project is considered applicable to more children than psychoanalytic or behavior modification techniques. —*Journal abstract*.

8302. Jones, Nancy M.; Loney, Jan; Weissenburger, Fred E. & Fleischmann, David J. (U Iowa) **The hyperkinetic child: What do teachers know?** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 388-392. —Asked 15 kindergarten and 1st-4th grade teachers to identify the 5 most hyperactive children in their classes. 66 teacher-identified hyperactive boys were rated significantly higher on the Hyperkinesis index of the Conners Teacher's Questionnaire than a group of nonhyperactive classmate control boys, but the mean Hyperkinesis index scores of teacher-identified hyperactives and clinic-diagnosed hyperkinetics did not differ from each other. The teacher-identified hyperactives were observed to be off-task 33% of the time in their classrooms, and the clinic-diagnosed hyperkinetics were off-task a comparable 37% of the time. It is suggested that if school personnel use their expertise to identify hyperactive children in the classroom and begin behavioral intervention programs at the earliest possible time, medical referral and treatment will be unnecessary for many children. (17 ref) *Journal abstract*.

8303. Jones, Neville J. **Emotionally disturbed children in ordinary schools: Concepts, prevalence and management.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 146-159. Suggests that it may be possible to help emotionally disturbed children in ordinary school who need specialized help without moving them to a special school or referring them to an agency, if use is made of a special adjustment unit. Some conceptual problems to maladjustment are discussed; reference is made to national surveys indicating a 14% prevalence rate of the problem; and a model of management for children in ordinary schools is outlined,

based on work carried out in Bristol, England, over the past seven yrs. (2½ p ref)—*Journal abstract*.

Counseling & Measurement

8334. Aliotti, Nicholas C.; Britt, Morris F. & Haskins, Guy P. (State U New York, Albany) **Relationships among creativity, intelligence, and achievement measures in Upward Bound students.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 423-427.—Administered to 94 disadvantaged Upward Bound high school students a test battery of the Otis Quick-Scoring Mental Ability Test; Preliminary Scholastic Aptitude Test (PSAT); Expressional Fluency, Alternate Uses, and Consequences Tests of J. P. Guilford; and the Figural form of the Torrance Tests of Creative Thinking (TTCT). Significant sex differences favoring males were obtained for Otis, PSAT-Verbal, and PSAT-Quantitative. Females excelled males on the figural elaboration score from the TTCT. White disadvantaged students scored significantly higher than their Indian counterparts on Otis IQ and higher than their Black counterparts on the PSAT-Quantitative. Whites also scored significantly higher than Indians on the Consequences-Obvious measure. A varimax rotation of the correlation matrix resulted in a 2-factor solution defined by intelligence-achievement scores and figural creativity. Guilford creativity tests were more closely related to the intelligence-achievement factor, while the Torrance figural creativity test remained a distinct factor. —*Journal abstract*.

8335. Alston, Herbert L. & Doughtie, Eugene B. (U Houston) **Correspondence of constructs measured by the Kindergarten Screening Inventory by sex and ethnic group.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 428-429. Investigated whether the constructs measured by the Kindergarten Screening Inventory (KSI) were the same for males and females and for Anglo-American, Negro-American, and Mexican-American groups. Ss were 1,527 kindergartners. The factor-relating procedure proposed by H. F. Kaiser et al (1969) to determine the extent to which the same constructs were measured with different groups was used. The correspondence between the constructs measured by the KSI for males and females and for the Anglo-American and Negro-American and Mexican-American groups was very similar. Findings indicate that substantially the same constructs are being measured by the KSI for both sexes and all ethnic groups. —*Journal abstract*.

Perceptual & Motor Skills, 1975(Oct), Vol 41(2), 594.—Data from a field test of a videotape recording system with stop action capabilities, used for 10 days with 4th graders engaged in arithmetic computation, support the use of such a technique for measuring the attending behaviors of individuals located within a group.

8338. Athay, Audrey L. (U Utah) **The relationship between counselor self concept, empathy, warmth, and genuineness, and client rated improvement.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3976.

8339. Atlas, John W. (Oakland U, School of Education) **Consulting: Affecting change for minority students.** *Journal of Non-White Concerns in Personnel & Guidance*, 1975(Jul), Vol 3(4), 154-160.—Discusses uses of a consulting strategy for work with minority group students. The consultant-consultee client model is presented as a way to promote positive attitudes and appropriate behaviors. Client groups considered include administrators, teachers, parents, and students. The role of consultation in establishing objects to use in evaluating educational programs is discussed, and the importance of the consultant working with adults vital to the life of the minority student is stressed. —R. Tomasko.

8340. Bardo, Harold R. & Cody, John J. (Southern Illinois U, Carbondale) **Minimizing measurement concerns in guidance evaluations.** *Measurement & Evaluation in Guidance*, 1975(Oct), Vol 8(3), 175-179. Discusses the difficulties involved in conducting evaluations of guidance and counseling programs. Of the difficulties listed only those that deal specifically with measurement terms are discussed. Examples are also provided of alternative means to the traditional approaches of measurement related to evaluation in general and guidance in particular. A rationale from the literature is provided for the alternative means of measurement suggested. It is argued that if practitioners could overcome the greatest difficulties involved in conducting guidance evaluation, other difficulties would be minimized to the extent that guidance evaluation could at least be initiated. (16 ref)—*Journal abstract*.

8341. Baumgardner, Steve R. (U Wisconsin, Eau Claire) **The impact of college experiences on conventional career logic.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 40-45. Using interview data from 20 college students, the factors students consider in choosing a college major were scaled on an analytic-intuitive dimension, emphasizing a continuum of thinking orientations from logical, rational thought to a more intuitive, reflexive mode. Administration of a subsequently developed 27-item questionnaire containing these factors to 586 undergraduates revealed that differences in thinking orientation were associated with sex, area of study, and year in school. A dramatic difference between strongly analytic freshman and more intuitive sophomore thinking seemed to reflect a clash between the conventional wisdom of parents and counselors and the direct emotional experiences of college. Overall, the apparent lack of explicit rationality in student educational decisions appears to be adaptive, because the uncertainties surrounding career opportunities and the involvement of emotions and broad life goals in career choice may make fully rational career planning impossible and undesirable. (19 ref) *Journal abstract*

8342. Bennett, Dale E. (U Minnesota) **The differential predictive effectiveness of selected pre-reading measures of success in reading at the end of grade one under each of six major approaches to first-grade reading instruction.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3680-3681.
8343. Bernkopf, Stanley; Hartley, Duane & Ware, William B. (Pioneer Cooperative Educational Service Agency, Cleveland, GA) **Developing a needs-based guidance system: A psychometric approach.** *Measurement & Evaluation in Guidance*, 1975(Oct), Vol 8(3), 180-186.—Traditionally, the psychometric qualities of instruments used in guidance research are not reported, and concerns of validity are passed over lightly. The current article examines this problem by delineating instrument development from the identification of content through the initial validation processes. Procedures for item selection, item validation, and the determination of test validity are discussed.—*Journal abstract*.
8344. Blai, Boris. (Bryn Mawr Coll) **Guidance and counseling in a two-year college.** *Psychology*, 1975(Aug), Vol 12(3), 54-58.—Stresses the importance of guidance and counseling staff members participating as qualified educators and being incorporated into their institution's educational program. Counselors are criticized for not providing clients with adequate information about vocational opportunities and requirements or about ways to make educational and value decisions. The philosophy of a women's junior college guidance program is discussed, and 7 of its services noted.—*R. Tomasko*.
8345. Bowman, Deanna H. (Auburn U) **A comparison of the effect of certain introspective activities on the self-concept of graduate students.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3861.

8356. Dore-Boyce, Kathleen; Misner, Marilyn S. & McGuire, Lorraine D. (U Santa Clara) **Comparing reading expectancy formulas.** *Reading Teacher*, 1975(Oct), Vol 29(1), 8-14.—A review of several methods of predicting reading expectancy indicates that multiple regression, using all appropriate variables available, yields a significantly better prediction of reading expectancy than any of the 2-variable correlations obtained between expectancy scores of the various formulas and observed reading scores. There is reason to believe also that a breakdown on IQ would yield similar results in favor of multiple regression. While the stepwise procedure clearly indicates contributions of variables other than MA or IQ to predict reading, it may be substantially as accurate from a practical point of view, and possibly more "parsimonious" to use the single predictor of MA for the calculation of reading expectancy at the 4th and 5th grade levels. 8369. Goldman, Roy D. & Hewitt, Barbara N. (U California, Riverside) **The Scholastic Aptitude Test "explains" why college men major in science more often than college women.** *Journal of Counseling Psychology*, 1976(Jan), Vol 23(1), 50-54.—Used the Scholastic Aptitude Test (SAT) to predict the major field choices of 20,809 undergraduates at 4 large universities. Major field was coded on a science-nonscience continuum, and it could be predicted almost as accurately as GPA. The SAT Mathematics subtest (SAT-M) received virtually all of the weight in the prediction equation. Semi-partial correlation was performed to determine if

the aforementioned prediction was a mere artifact of sex differences. Results suggest that (a) mathematical ability is an important determinant of major field choice, and (b) the male female difference in major field choice is largely mediated by the sex difference in mathematical ability. A remedy is suggested for female underrepresentation in science fields.—*Journal abstract*.

8370. Goldman, Roy D. & Slaughter, Robert E. (U California, Riverside) **Why college grade point average is difficult to predict.** *Journal of Educational Psychology*, 1976(Feb), Vol 68(1), 9-14.—Many errors in the selection of college students are inversely related to the validity of the predictors employed. The generally weak validity with which GPA has been predicted gives rise to a substantial number of selection errors, including those that support charges of cultural bias. This situation has produced criticisms of standardized tests and a search for alternative models of fair selection. The present investigation with 254 undergraduates suggests that the problem has been misinterpreted. It is a criterion problem rather than a predictor problem. The investigation demonstrates high validity for predicting grades in single classes. Since single-class grades are components in the GPA composite, it seems paradoxical that GPA prediction is inferior to grade prediction in single classes. The explanation for this may reside in different standards of grading in different classes. Implications and remedies are also discussed.—*Journal abstract*.

8374. Hamblin, D. H. (University Coll, Swansea, England) **The counsellor and strategies for the treatment of disturbed children in the secondary school.** *British Journal of Guidance & Counseling*, 1975(Jul), Vol 3(2), 172-189.—Argues that the most appropriate method of treatment for disturbed pupils within the secondary school lies in the development of special units in which these pupils can follow programs specially designed for each individual. Attention is drawn, however, to the way in which self-defeating strategies can be built into these programs and the deviant identity of these pupils reinforced unless a careful analysis is made of the relationship of the unit to the rest of the school. The programs should develop such skills as decision-making, cooperation, and self-control. The counselor's skills can be utilized in the diagnostic period which precedes the pupils' entry into the unit and are especially relevant in the construction of the individual programs and in orienting pupils toward the treatment process. The counselor should also intervene to insure that a

successful transition from the unit to the ordinary classroom is achieved (1½ p ref)—*Journal abstract*.

8410. Parker, Chester C. & Huff, Vaughn E. (Middle Tennessee State U) **The effects of group counseling on rigidity.** *Small Group Behavior*, 1975(Nov), Vol 6(4), 402-413.—Investigated the effect of a group counseling program on rigidity. 86 psychology students were given the Breskin Rigidity Test (BRT), the F scale of authoritarianism, and a semantic differential instrument for rating self-concept, as pre- and posttest measures. After the program, the experimental and control groups differed significantly on the BRT and F scale, suggesting

that group counseling can decrease rigidity in the attitudes and behavior of college students.—J. Rubin.

8411. Pentecoste, Joseph C. & Nelson, Norbert J. (Indiana U Northwest, Gary) **Effects of small group counseling on cognitive growth of bright underachievers in an atypical educational situation.** *Education*, 1975 Vol 96(1), 89-94.—120 randomly selected bright underachievers (as measured by the Lorge-Thorndike Intelligence Test, level 4AN) were divided into 2 experimental groups and 2 control groups. The independent variables were teaching methodologies and small group counseling. It was hypothesized that both experimental groups would display significant cognitive gains over the control groups, and that the experimental group exposed to small group counseling would exhibit significant gains over the experimental group not exposed to counseling. Findings do not support the hypotheses. This is explained in terms of the program time element, the lack of control over counseling methodology, and the noninvolvement of parents in the counseling procedure. However, when data were controlled on race, significant differences were found in the noncounseled group.—*Journal abstract*.

8412. Plon, Herta B. (Temple U) **The establishment and evaluation of a group counseling program for ninth and tenth grade students transferring from parochial to public school.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3887.

8414. Rasmussen, Norman H. (U South Dakota) **The effects of violating WISC standard administrative procedures on the performance of third-, fourth-, and fifth-grade children of normal and borderline intelligence.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4886.

8415. Rhem, Thomas N. (Memphis State U) **Rotation scores of the Minnesota Percepto-Diagnostic Test as a predictor of reading achievement in emotionally disturbed boys.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4714.

8416. Salvia, John; Ysseldyke, James E. & Lee, Michael. (Pennsylvania State U) **1972 revision of the Stanford-Binet: A farewell to the mental age.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 421-422.—Reports that inspection of the 1972 revised norms for the Stanford-Binet demonstrates that the average mental age for a particular CA no longer numerically corresponds to that CA. Mental ages derived from the test can no longer be interpreted as mental ages. A table of test ages based on the 1972 norms is provided.

8417. Sassenrath, J. M. (U California, Davis) **Theory and results on feedback and retention.** *Journal of Educational Psychology*, 1975(Dec), Vol 67(6), 894-899.—Reanalyzed data from 3 previous studies by J. M. Sassenrath (1972) and J. M. Sassenrath and G. D. Yonge (1968, 1969) to obtain 2 types of ratio scores: (a) the change from a wrong response on Test 1 (W_1) to a right response on Test 2 (R_2) and (b) the change from a right response on Test 1 (R_1) to right response on Test 2 (R_2).

Feedback was either immediate or delayed between Test 1 and Test 2. Delayed feedback produced a higher R_2-W_1 score than did immediate feedback, making the interference-perseveration theory preferable to the verbal rehearsal theory. Immediate feedback did not produce a higher R_2-R_1 score than did delayed feedback, indicating that immediate feedback does not act as a reinforcer of R_2-R_1 , but as information to change R_2-W_1 .—*Journal abstract*.

8418. Schleuter, Stanley L. (State U New York, Buffalo) **An analysis of the use of the "in doubt" response by university students on the Musical Aptitude Profile and the Iowa Tests of Music Literacy.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 481-483.—Administered the Musical Aptitude Profile (MAP) and 4 levels of the Iowa Tests of Music Literacy (ITML) to 78 university non-music majors to investigate the use of the "in doubt" test item response. The "in doubt" response was not used indiscriminately by Ss on either test battery, and it appeared to function in a similar manner to use by public school students. The incidence of use of the "in doubt" response on ITML levels suggested that Ss felt quite confident of their answers on the achievement test levels and that this confidence remained stable throughout a semester of training. No reason to suspect the process validity of MAP or of ITML when used with university students was found.—*Journal abstract*.

Discusses rationale, reliability, factorial validity, and educational usefulness of the Illinois Test of Psycholinguistic Abilities (ITPA). The ITPA is a serious attempt to identify specific sensory processing abilities. It is assumed that deficits can be remediated and that instruction can be matched to students' strengths and weaknesses. The ITPA is not a test of psycholinguistics since it does not yield information about the units of natural language. The subtests have good internal consistency and the composite score is reliable over time periods most applicable for instructional planning. Reliability of individual subtests are too low to guide remediation. Factor analytic studies indicate the ITPA is primarily a measure of verbal intelligence. Remediation directed toward strengths and weaknesses in sensory or perceptual processing has not been effective. (23 ref)—*Journal abstract*.

8437. Wood, R. & Naphthali, W. A. (U London, England) **Assessment in the classroom: What do teachers look for?** *Educational Studies*, 1975(Oct), Vol 1(3), 151-161.—Explored the idea that teachers look for different behaviors to reward when making assessments of students' achievement. Using a repertory grid technique, 16 secondary school teachers of geography and mathematics were asked to name the attributes they look for and to rank them in order of importance; data were collected on 355 students. Cognitive attributes were generally predominant but there was a class of attributes, termed "motivational," which appeared to exert considerable moderating effects. It was in their response to sets of behaviors like "industry" and "perseverance" that teachers showed greatest individual differences in rating performance. Suggestions are made for bringing greater systematization into assessments although it is recognized that there is likely to be a limit to what it is possible to do. (19 ref)—*Journal summary*.

8441. Aranya, N. & Jacobson, D. (Tel-Aviv U, Leon Recanati Graduate School of Business Administration, Israel) **An empirical study of theories of organizational and occupational commitment.** *Journal of Social Psychology*, 1975(Oct), Vol 97(1), 15-22.—Empirically examined the theories on organizational and occupational commitment developed by H. Becker (1960, 1965) and by G. Ritzer and H. Trice (1969). The relationships between commitments and between commitments and various background indicators of the number of side-

bets, were examined in regard to system analysts in Israel. 228 questionnaires returned by members of the Israeli Association of System Analysts were analyzed. While the study gave little support to hypotheses based on Becker's theory, those based on Ritzer and Trice's theory were fully accepted in that commitment was positively correlated with age and salary, organizational commitment was positively correlated with occupational commitment, and the sole indicator of high occupational commitment was entry job.—*Journal abstract.*

8442. Benel, Russell A. & Storm, William F. Neptune: Modifications and current applications. *USAF School of Aerospace Medicine*, 1975(Aug), Vol 75(20), 39 p.—Presents recent modifications of the Neptune (neuropsychiatric test unit) psychomotor test apparatus and a brief description of individual vigilance, problem solving, short-term memory, and compensatory tracking tasks. Currently available system workload program listings and typical learning data under these workloads are discussed. Standardized instructions for the Neptune operator console are provided. Previous Neptune use is documented in an annotated bibliography.—*Journal abstract.*

8443. Brooks, Andrew J. (Chicago Police Dept., Criminalistics Div, IL) Frequency of distribution of crime scene latent prints. *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 292-293.—Presents 4 yrs of latent fingerprint identification data showing that right- and left-hand prints are equally probable, and that the order of frequency of single fingerprints is thumb, middle, and index.—*R. J. Albers.*

8444. Douthitt, Nathan. (Southwestern Oregon Community Coll) Enforcement and nonenforcement roles in policing: A historical inquiry. *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 336-345.—Gives a comprehensive history of the development of police professionalism from 1920 to the present. During the 1920s and 1930s, a "war on crime" atmosphere fostered many scientific, administrative, and technological changes in police work, but discouraged the development of police programs in social service, crime prevention, and community relations. Early police crime prevention programs centered on juvenile and adult female offenders. Nonenforcement roles of police are receiving more attention now, due to racial conflict, traffic congestion, and high juvenile delinquency rates.—*R. J. Albers.*

8445. Estes, Richard J. (U California, Berkeley) The unemployed professional: The social, psychological and political consequences of job displacement among educated workers. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 4403-4404.

8446. Fernex, Frederick J. (Suffolk County Police Dept, Administration Bureau, NY) Attitudes of certain criminal justice personnel toward drug laws and drug offenders. *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 354-362.—Investigated the attitudes of 85 police recruits, 140 veteran policemen, 26 assistant district attorneys, and 30 probation officers regarding drug laws and drug offenders, using a self-administered questionnaire. The police recruits were surveyed before and after academy training and were found to move in the direction of police officer attitudes. All 4 respondent groups agreed that courts have too much discretionary

power, and that drug laws are not effective deterrents. However, district attorneys and probation officers held softer, more liberal attitudes than police on all other questions. Results are interpreted in the light of the attitudinal conflicts among the elements of the criminal justice system.—*R. J. Albers.*

8447. Heaukulani, David. (Honolulu Police Dept, HI) The normal distribution of crime. *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 312-318.—Presents the thesis that the amount of crime is dependent upon factors which are normal in the social order, such as greater population density, more autos, residences, etc. Therefore, as urbanization and attendant opportunities for crime increase, the amount of crime can be expected to increase. A path analysis model and a linear regression model are presented as techniques to estimate the expected increase in crime. These techniques are recommended to criminal justice planners who must set realistic goals for crime control programs.—*R. J. Albers.*

8448. Matoušek, Oldřich & Zastávka, Zdeněk. [Proposal for classification and evaluation of operators' activities.] (Czech) *Syntéza*, 1973(Jun), Vol 6(3), 86-96.—Discusses the effect of technological change on classifying the job of operator. An analysis of the interaction of man, the means of production, and the object of the work produced a hypothetical 5 type-level job description with algorithmic signs having skill significance. (English, French, Russian, & German summaries)—*P. Babarik.*

8449. Pym, Denis. (U London, Graduate School of Business Studies, England) The demise of management and the ritual of employment. *Human Relations*, 1975(Oct), Vol 28(8), 675-698.—Discusses the links between the condition of employment and the issues of alienation, the overconsumption of scarce resources, and pollution. A return to the pursuit of emancipation as a primary concern in reexamining the relationship between man, work, and employment is recommended.

8450. Wildman, Kim S.; Phillips, Valerie A. & Thornton, John I. The quantitative estimation of the strength of associations in *modus operandi*. *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 301-304.—Presents an association coefficient that is appropriate for contingency tables, especially for applications in forensic science, such as *modus operandi* resemblances.—*R. J. Albers.*

Occupational Attitudes & Interests & Guidance

8451. Blum, Stuart H. (Brooklyn Coll, City U New York, School of Education) The desire for security in vocational choice: A comparison of men and women. *Journal of Psychology*, 1975(Nov), Vol 91(2), 277-281.—The Attitudes in Vocational Choice inventory, designed to measure the degree of emphasis placed upon a desire for security in choosing a job or an occupation, was completed anonymously by 102 male and 91 female 17-52 yr olds. The difference between the mean security score of the males when compared to that of the females was not statistically significant. However, statistically significant differences were found between mean scores of subsamples of 26 males and of 22 females with the occupational orientation of business when compared

with mean scores of subsamples of 25 males and of 21 females, respectively, in education. Results imply that consideration of security aspects is appropriate to vocational decisions, but not on a differential sex basis. It is suggested that if present societal trends continue, intrasex differences in vocational choice could be expected to become more evident than intersex differences.—*Journal abstract.*

(VA Hosp, New Orleans, LA) **Physique and personality: Somatotype and vocational interest.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 382. —Correlation of 300 males' scores on the SVIB for Men with somatotypes (using W. H. Sheldon's concepts and measurement techniques) resulted in many significant relationships.

8455. Farmer, Helen S. (U Illinois, Champaign-Urbana) **Career counseling.** *New Directions for Higher Education*, 1975(Aut), No 11, 61-78. Suggests ways in which counselors can increase the career potential of women by providing information, questioning traditional attitudes, and teaching work-related skills. Issues discussed related to the counseling needs of a variety of women include individual or group counseling, assessment and diagnosis, self-information resources, planning for multiple roles, and career motivation. Emphasis is placed on ways of increasing the available options, and the special needs of reentry women, Blacks, divorcees, widows, and career changers are considered. (58 ref)—*R. Tomasko.*

8456. Gandy, Gerald L. (Virginia Commonwealth U) **A review of sex of sibling studies related to vocational interest.** *Psychology*, 1975(Aug), Vol 12(3), 15-19.

Demonstrates that the relationship between sex of sibling and vocational interest tends to be inconsistent and contradictory. Some research indicates that opposite sex siblings acquire gender characteristics from each other which influence their vocational interests. Other research suggests that an opposite sex sibling becomes even more firmly identified with his own sex in terms of vocational interest. Moreover, there is research which disputes the fact that sex of sibling has any relationship to vocational interest. It appears that this relationship is dependent on a complex interaction of variables (e.g., sex and age of siblings, birth order, age spacing and family size, socioeconomic and cultural backgrounds, and parents' personalities) relevant to social psychological development. (17 ref)—*Journal summary.*

8457. Hazel, Joe T.; Stacy, William J. & Burtch, Lloyd D. **Assignment location preferences of airmen.** *US AFHRL Technical Report*, 1975(Oct), No 75-50, 50 p.

Administered a survey to 4,670 airmen about assignment location preferences for 150 locations in the continental US. Results show that most preferred locations were concentrated in Florida, California, and Colorado and least preferred locations in "northern tier"

states; that variability in base preference ratings increased with an increase in level of desirability; and that airmen may have a low level of awareness of certain geographical-environmental characteristics for US locations.

8461. Mulroy, John P. (U Wyoming) **A comparison of differential modes of interpretation of the Strong Vocational Interest Blank with high school juniors.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4756-4757.

8462. Phalen, William J. **Comprehensive occupational data analysis programs (CODAP): Ordering of hierarchically grouped case data (KPATH) and print KPATH (PRKPTH) programs.** *US AFHRL Technical Report*, 1975(Aug), No 75-32, 27 p. —Presents a technical report for occupational analysts, occupational research personnel, and personnel managers on the functions and utilities of Comprehensive Occupational Data Analysis Programs (CODAP) Examples of applications of the Ordering of Hierarchically Grouped Case Data (KPATH) and Print KPATH (PRKPTH) programs which facilitate the identification of background variables having similar values for all or most cases in any hierarchical group are presented.

8463. Tinsley, Joyce R. (U Missouri, Kansas City) **The differential effects of an audio program learning tape and open group discussion on women's attitudes toward women and work.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3894.

8464. Treiman, Donald J. (U California, Ctr for Policy Research, Los Angeles) **Problems of concept and measurement in the comparative study of occupational mobility.** *Social Science Research*, 1975(Sept), Vol 4(3), 183-230. Argues that there is almost no firm knowledge about societal differences in the rates, patterns, and processes of occupational mobility. Insufficient attention has been paid by previous researchers to the problem of standardizing the measurement of occupational status. As a result existing cross-national comparisons of mobility are virtually invalid. A Standard International Occupational Prestige Scale is proposed as a basis for valid cross-national comparison. Properties of the scale are discussed, and results achieved with the scale are compared to those based on other occupational scoring procedures. (47 ref)—*Journal abstract.*

Personnel Selection & Training

8465. Brown, James E. & Rust, Steven K. **Undergraduate pilot training task frequency study.** *US AFHRL Technical Report*, 1975(Aug), No 75-19, 57 p.

—Determined the number of task repetitions required for an undergraduate pilot training (UPT) student to become proficient in each UPT task and total number of task repetitions that UPT students receive for each maneuver. Results of 2 studies are presented which show the development of data collection procedures for an operational UPT program and the implementation of these procedures, and implications for syllabus development are discussed.

8466. Duncan, K. D. & Shepherd, A. (U Hull, England) **A simulator and training technique for diagnosing plant failures from control panels.** *Ergonomics*, 1975(Nov), Vol 18(6), 627-641.—Devised and tested a simulator which uses back-projection to life size of slides of control panel mock-ups by a random access projector. Under an adaptive cumulative part regime, 17 undergraduates trainees saw an average of 89 failure arrays in 30 min, an obvious advantage over the operational situation. In a test 24 hrs after training, consisting of the 8 faults each presented 4 times in random order, 4 out of 17 Ss made only 1 error in 32 diagnoses; the other Ss performed perfectly. Ss' reports indicated very different solution strategies (e.g., recognition of alarm patterns, and serial instrument checking determined by heuristics of plant functioning). Several features of performance were consistent with the view that trainees use a minimal number of dimensions for correct discrimination and that these change as the number of different fault arrays increases. It is argued that this training regime should reduce stress. In particular it is argued that, according to current theories of stress, the fewer dimensions needed for diagnosis, the more robust will be diagnostic performance in dangerous environments. (French & German summaries)—*Journal abstract*.

8467. Eddowes, Edward E. & King, Norman W. (Flying Training Div, AFHRL, Williams AFB, AZ) **Self-perceived problems of student pilots eliminated from undergraduate pilot training.** *US AFHRL Technical Report*, 1975(Jul), No 75(8), 28 p.—Describes how students eliminated from undergraduate pilot training (UPT) perceived the circumstances leading to their elimination. Personal interviews with 117 eliminees provided information on the similarities and differences among 5 categories of attrition (self-initiated elimination (SIE), manifestation of apprehension (MOA), flying deficiency (FD), medical deficiency (MD), and academic deficiency (ACAD). When major problem areas identified were related to learning how to land the aircraft and with student-instructor pilot interactions, inability to acquire pilot skills was not as important a basis for elimination from UPT as were other categories of elimination, such as SIE and MOA, both of which were associated with a variety of psychological attributes. It is concluded that eliminees' perceptions of training problem areas can provide useful information for training program management and can suggest areas for training research.—*Journal abstract*

8468. Eddowes, Edward E., McRee, Phillip L., Matheny, W. Guy & Crowder, Norman A. (AFHRL, Flying Training, Williams AFB, TX) **Preliminary operational evaluation of an audiovisual instrument trainer.** *US AFHRL Technical Report*, 1975(Jul), No 75-49, 21 p.

—Reports the results of an evaluation of the audiovisual instrument trainer (AVIT) which uses multi-media instruction in aircraft instrument scanning, interpretation, and flight path error correction procedures. Results indicate the AVIT-trained students made significantly more correct responses than student pilots not trained on AVIT.

8469. Girtton, Lyda G. (Indiana U) **A comparison of the characteristics of enrollees who participated in the work incentive and concentrated employment programs.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4741.

8470. Hakel, Milton D., Klimoski, Richard J. & Wood, Michael T. (Ohio State U, Research Foundation) **Management of social incentives in Air Force technical training: A field experiment.** *US AFHRL Technical Report*, 1975(Sep), No 75-11, 181 p.—Describes a field experiment which explored the use of social incentives in Air Force technical training. Data from Ss in a resident training avionics course show that none of the 4 experimental conditions ("Hawthorne effect" control condition, leader attitude training system, leader recognition system, and classroom behavior development system) had any appreciable effect on performance, although 1 system did have a significant positive effect on student attitudes toward other trainees.

8471. Kennedy, T. C. (North-East Thames Regional Health Office, Southend Hosp, Essex, England) **Some behavioural factors affecting the training of naive users of an interactive computer system.** *International Journal of Man-Machine Studies*, 1975(Nov), Vol 7(6), 817-834.—A large sample of clerical and secretarial staff provided 50 hrs of observation and measurement of man-machine interaction. Analysis of test results required the development of new measures of performance for recording behavioral variables, conceptualization of the system, and level of ability. Results indicate that it is possible, with a self-teaching computing system, to train "computer-naive" clerical staff to a high degree of competence in a very small number of short training sessions. Behavioral patterns are examined with regard to their influence on the design of command structures.—*Journal abstract*.

8472. Kron, G. J. (Singer-Simulation Products Div, Binghamton, NY) **Advanced simulation in undergraduate pilot training: Motion system development.** *US AFHRL Technical Report*, 1975(Oct), No 75-59(11), 72 p.

—Describes the development and preliminary implementation of a computerized pilot training kinesthetic simulator which contains a motion math model permitting E to vary widely the resultant motion information and thereby contribute to the determination of a relationship between the amount and scope of motion information and training value.

8473. Matheny, W. G. (Life Sciences, Inc, Hurst, TX) **Training research program and plans: Advanced simulation in undergraduate pilot training.** *US AFHRL Technical Report*, 1975(Jun), No 75-26(11), 102 p.—Surveyed 12 experts in pilot training to determine the important training research problems to be undertaken in order to increase training effectiveness in beginning pilot training. The highest priority problems were examined in the light of the research equipment

capabilities of the US Air Force Human Resources Laboratory, Flying Training Division, and administrative constraints. Initial experiments in training methodology and training simulator requirements are recommended and outlined, and the performance equivalence approach to research in these areas is described. Studies are suggested designed to evaluate the concept and its use in training research. (23 ref)—*Journal abstract*.

8474. Pina, Manuel. **Training line simulator (enhanced version): Revised user's manual.** *US AFHRL Technical Report*, 1975(Jun), No 75-25, 146 p.—This revised manual describes system functions and modules and gives user instructions for the training line simulator (T.L.S.). It is noted that the T.L.S. has been reprogrammed to run on the AFHRL UNIVAC 1108 and that this version of the manual reflects the reprogramming.

8475. Roberts, William B. **Group decision-making and problem-solving.** *Training & Development Journal*, 1975(Oct), Vol 29(9), 36-39.—Advocated participation training as a specific method of giving staff members practice in working together to solve problems. Human understanding, acceptance, and commitment can be learned in small group discussions focused on topics of interpersonal interest.—*R. L. Sulzer*.

8476. Ross, M. Gerlene. (U Pittsburgh) **The effect of a reduced number of sentence transformations on test performance for two cultural groups (Blacks and Whites) as measured by the original and some revised versions of a New York State civil service examination of reasoning ability.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2356.

8477. Taylor, John E. et al. **Establishing the concepts and techniques of performance-oriented training centers: A summary report.** *HumRRO Technical Report*, 1975(Jun), No 75-21, 44 p.—Describes a 3-yr effort by Work Unit ATC-PERFORM to review, evaluate, and refine performance-based training in the all-volunteer US Army. The operation of the program and its accomplishments in 6 specific areas are described. (2 p ref)

Personnel Evaluation & Performance

8478. Christal, Raymond E. **Systematic method for establishing officer grade requirements based upon job demands.** *US AFHRL Technical Report*, 1975(Jul), No 75-36, 39 p.—Interim results of a study developing a management engineering methodology indicate that US Air Force manpower and management engineering personnel can accurately apply Officer Grade Requirements determination procedure for positions based on job content and responsibilities. (15 ref)

8479. Corporan, Chuck. **What do you say after you say "Good morning"?** *Training & Development Journal*, 1975(Nov), Vol 29(11), 44-47. Because selling success is dependent upon accurately reading other people, it is suggested that the salesman can benefit by applying the principles of transactional analysis. Study of these principles, thought, and introspection are required if the salesman is to become more open in his dealings and is to read reactions confidently. Prospecting for business and closing the sale are crucial and difficult areas of selling where knowing the client's ego state and responding to it appropriately will keep communication going.

Success requires that someone know what is happening in the transaction, and that "someone" should be the salesman.—*R. L. Sulzer*.

8480. Fogus, Donald L. (North Carolina State U, Raleigh) **Evaluating the forester in the environmental age.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2392.

8481. Hammerton, M. (U Newcastle-upon-Tyne, England) **The use of same or different sensory modalities for information and instructions.** *Ergonomics*, 1975(Nov), Vol 18(6), 683-686. Conducted a study in which 57 19-27 yr old Royal Navy ratings acted upon incoming information in accordance with instructions which were altered from time to time. Five conditions were examined: instructions heard, information seen; instructions seen, information heard; both seen; both heard; and both randomly mixed. Performance was markedly superior in the 1st condition. It is concluded that this should be the form of information presentation to be recommended where possible. (French & German summaries)—*Journal abstract*.

8482. Hennigan, James K. & Wortham, A. W. (Texas A&M U) **Analysis of workday stresses on industrial managers using heart rate as a criterion.** *Ergonomics*, 1975(Nov), Vol 18(6), 675-681. Evaluated the impact of job activity on heart rates (HRs) of 24 27-55 yr old males. EKGs were obtained during a normal workday to determine the effect of industrial work conditions during 2 6-10 hr periods, giving 48 possible data-days, of which 45 were used in this study. Ss were analyzed according to age, type of company, and organizational situation. Activities of the day, having been recorded in personal diaries, were compared to HR records obtained during the same period. The period of highest daily HR occurred 70% of the time during nonphysical work activities specifically identified by the Ss. Results indicate that situations identifiable by Ss as potentially stressful can cause high HR, and conversely high HR can lead to the identification of industrial situations stressful to the employee. (French & German summaries)—*Journal abstract*.

8483. Hogan, Robert & Kurtines, William. (Johns Hopkins U) **Personological correlates of police effectiveness.** *Journal of Psychology*, 1975(Nov), Vol 91(2), 289-295. Conducted a study with the Police Department of Oakland, California, which supports results obtained earlier with the Maryland State Police concerning the personological correlates of competent police work. With use of California Psychological Inventory protocols for 229 male police officers and trainees, evidence is provided on 3 points (a) the modal personality of police, (b) the personality characteristics associated with persistence in police work, and (c) the personality correlates of effective performance. These samples of American police were found to be masculine, self-confident, and socially effective. Good police are characterized by functional intelligence, achievement motivation, and social poise. (15 ref)—*Journal abstract*.

8487. Murrell, G. A. (MRC Applied Psychology Unit, Cambridge, England) **A reappraisal of artificial signals as an aid to a visual monitoring task.** *Ergonomics*, 1975(Nov), Vol 18(6), 693-700.—Three groups of male naval ratings ($N = 53$) performed a visual search and detection task on an inherently noisy display. One group was given real signals only, in a random 0.1 of the trials, without knowledge of results (KR). The 2nd group was given artificial signals, identical with the real signals, on a further 0.05 of the trials, increasing the apparent signal rate by 50%. The 3rd group was similarly given artificial signals and also immediate KR on the trials in which artificial signals occurred. Ss with artificial signals detected on average 75% of the real signals against 63% detected without, but also made 22% compared with 12% false alarms. This indicates a difference in response criterion even greater than normatively expected for the difference in signal probabilities, but there was no difference at all in discrimination efficiency. No benefit was conferred by KR, probably because, with variable signals, no single form could be learned to serve in their discrimination. (French & German summaries) (16 ref) —*Journal abstract.*

8498. Eden, Dov & Leviatan, Uri. (Tel Aviv U, Israel) **Implicit leadership theory as a determinant of the factor structure underlying supervisory behavior scales.** *Journal of Applied Psychology*, 1975(Dec), Vol 60(6), 736-741.—Examined implicit leadership theory (preconceptions about the patterning of leadership variables) in 235 college students. Ss completed the Survey of Organizations questionnaire on a fictitious "Plant X" about which they were given little information. Factor analysis, performed on the items purported to measure 4 leadership factors, resulted in the conceptualized factor structure. Since no information was given regarding supervisory behavior in Plant X, the factor structure was attributed to an implicit leadership theory. Factor analysis on subsamples indicated the factor structure could not be attributed to either experience in organizations or previous instruction in management. It is

suggested that responses to questionnaires regarding organizational variables may be contaminated by implicit theory and that multitrait-multimethod procedures may be required to validate questionnaires.—*Journal abstract.*

8507. Stacy, William J. & Hazel, Joe T. **A method of determining desirable task experiences for first-line supervisors.** *US AFHRL Technical Report*, 1975(Aug), No 75-23, 22 p. -1,261 accounting and finance supervisors rated 254 journeyman-level tasks in 8 areas on the importance of a supervisor knowing how to perform those tasks. The findings that many supervisors had limited experience in the desirable journeyman-level tasks and that most had spent their career time within few of the 8 work areas indicate that persons in the present Air Force accounting and finance work management unit may not have enough experience to rate the tasks.

8508. Waters, Elmer E. (City U New York) **The relationship between a leader's opinion of his least preferred coworker (LPC score) and the leader's cognitive complexity: An experimental study.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3638.

8509. Wiley, Llewellyn N. **Familiarity with subordinates' jobs: Immediate versus secondary supervisors.** *US AFHRL Technical Report*, 1975(Jun), No 75-7, 22 p. Tested the hypothesis that only immediate supervisors know enough about their subordinates' job activities to render job performance ratings. Pairs of supervisors who rated the quality of performance of Supply airmen had identified themselves as immediate supervisors and other-than-immediate supervisors. These pairs, working independently, rated the same airmen on how well they performed individual tasks. Each supervisor was asked to rate each task that he was sure the subordinate did, but he was not told which tasks the subordinate had identified. The selections of tasks were tallied against the responses made by the incumbents on the same inventory. An incumbent's responses were relative time spent ratings. Tasks were classified by a scale of percent time spent, and 2 supervisory levels were compared in terms of percentage of tallies ("agreements") with the incumbents. The tallies were greater for tasks on which the airmen spent more time, but there was no detectable difference between immediate and other supervisors.—*Journal abstract.*

Organizational Behavior & Job Satisfaction

8511. Barnowe, J. Thad. (U British Columbia, Vancouver, Canada) **Leadership and performance outcomes in research organizations: The supervisor of scientists as a source of assistance.** *Organizational*

Behavior & Human Performance, 1975(Oct), Vol 14(2), 264-280.—Examined associations between a multifaceted measure of several forms of assistance leaders might provide to subordinates, a measure of closeness of supervision, and a criterion measure of 2 types of organization-level research outcomes (contribution to scientific knowledge and contribution to applied practices). Leadership measures were collectively able to explain 18% of the variation in the applied scientific contribution of 81 subunits of a large research organization. Several factors moderated the importance of leader behavior, including isolation from the scientific community and scientists' length of service. There were indications that 1st-level supervisors of scientists serve as sources of help or assistance on which scientists do not always rely. Where scientists were in some way disadvantaged, leader behavior was more strongly related to research outcomes than where conditions were more advantageous. (25 ref)—*Journal abstract*.

8512. Bowers, David G.; Franklin, Jerome L. & Pecorella, Patricia A. (U Michigan, Inst for Social Research, Ctr for Research on the Utilization of Scientific Knowledge) **Matching problems, precursors, and interventions in OD: A systematic approach.** *Journal of Applied Behavioral Science*, 1975(Oct-Dec), Vol 11(4), 391-409.—Develops a framework for systematic organizational development, including a model for matching interventions with problem causes using concepts from social systems theory and medical pathology. At the foundation of the framework are 3 basic principles of change applicable both to physical and social systems: (a) Interventions designed to change leadership behavior must be selected to fit properties of the system. (b) Certain areas or aspects of systems are predisposed to successful change. (c) Change occurs indirectly through a series of cause-effect successions. Systematic organizational development is presented as a process of identifying and matching problem behavior, precursors, and appropriate interventions. Implications for practitioners are presented, along with illustrations suggesting the advantages of this approach. (20 ref)—*Journal abstract*.

8526. Kotte, N. V. & Supe, S. V. (National Inst of Community Development, Rajendranagar, India) **Motivator and hygiene factors in job satisfaction of agricultural extension officers.** *Journal of the Indian Academy of Applied Psychology*, 1973, Vol 10(2-3), 41-47.

The advent of the motivation-hygiene theory generated a series of research attempts from researchers who, in their attempt to test the postulates of the theory empirically, indulged at times in a wordy warfare rather than arriving at fruitful conclusions. In this study an approach similar to that of F. Herzberg et al (1959) was followed. It was found that the theory was not methodologically bound as has been concluded by many workers. Responses of Agriculture Extension Officers were obtained with the help of a structured questionnaire. Responsibility, achievement, work itself, ability utilization, promotions, independence, recognition, relations with supervisor and co-employees, policy and administration, technical supervision, job security, personal life, salary, and job status were the job features that were studied with respect to their contribution to both feelings of satisfaction and dissatisfaction for the job. No factor was found to be unipolar in nature; that is, the factors were found to contribute both to feelings of satisfaction and dissatisfaction for the job. Except the postulate on dimensional independence of feelings of satisfaction and dissatisfaction, no other postulate was found to be valid. (26 ref)—*Journal abstract*.

8527. Martin, Haywood H. (National Training Laboratory Inst, Rosslyn Station, VA) **How we shall overcome resistance.** *Training & Development Journal*, 1975(Oct), Vol 29(9), 32-34.—As suggested by cognitive dissonance theory, resistance to implementation of change may be overcome if individuals perceive that they are exercising choice. R. L. Sulzer.

8528. McMahon, Anne M. & Camilleri, Santo F. (Stanford U) **Organizational structure and voluntary participation in collective-good decisions.** *American Sociological Review*, 1975(Oct), Vol 40(5), 616-644.—Voluntary participation in collective-good decisions is formulated as an exercise of individual choice within a context determined by the authority structure and the agreement structure of an organization. A choice model is used to examine empirically, with simulated organizations, the nature of a collective-good decision. Implications with respect to considerations of size, efficacy, and structural complexity are discussed.

8529. Meyer, Marshall W. (U California, Riverside) **Organizational domains.** *American Sociological Review*, 1975(Oct), Vol 40(5), 599-615.—Argues that intangible claims to domain affect the behavior of administrative

bureaus. It is suggested that the structure of whole local governments which links bureaus with one another and removes them from their constituents explains this behavior.

8530. Mills, D. Quinn. (Massachusetts Inst of Technology, Sloan School of Management) **Managing human relationships among organizations: Theory and practice.** *Organizational Dynamics*, 1975(Spr), Vol 3(4), 35-50.—Discusses the nature, importance, and hazards of interorganizational relationships. Many common managerial approaches to problems of these relationships are of limited usefulness. Guidelines for dealing with such problems are offered, including the following: understanding the other group; recognition of the real priorities; careful planning of procedures; correct timing of contacts; offering problems rather than solutions; use of persuasion rather than power; revealing priorities, as a method of dealing with possible secondary effects of change; and conducting interorganizational discussions in a manner that will facilitate agreement, taking precautions that experience has proved necessary.—A. Debons.

8531. Munoz, Mona. (City U New York) **Job satisfaction in policemen and its relation to locus of control, ego strength, and performance.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2946-2947.

8532. Reppetto, Thomas A. (John Jay Coll of Criminal Justice, City U New York) **The influence of police organizational style on crime control effectiveness.** *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 274-279.—Tested the hypothesis that the style of police department organization had no effect on the control of crime. One modern professional department and one traditional department was chosen in 2 socio-demographically matched cities. The difference in police style in the 2 cities was as large as possible. Comparison of the homicide, auto theft, and crime clearance rates showed that the professional department was superior. This interpretation is considered tentative because of other possible explanations, but results suggest that organizational style has a major effect on crime control.—R. J. Albers.

8533. Rubin, Ira S. (State U New York, Buffalo) **The consistency of beliefs concerning interorganizational control in federal research and development contracting environments.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2990.

8534. Russell, Kevin J. **Variations in orientation to work and job satisfaction.** *Sociology of Work & Occupations*, 1975(Nov), Vol 2(4), 299-322. Examines the issues resulting from a bipartite analysis of job satisfaction. The phenomenon of job satisfaction is conceptualized, and the proposition that the I. Herzberg hypothesis is an oversimplification of the relationship between variables because it fails to take account of variations in orientation to work relative to the work situation was tested, using 50 manual labor trainees. Results indicate the hypothesis is an oversimplification. (24 ref)—*Journal abstract*.

8535. Schaefer, Susan D. (Stanford U) **Some cognitive factors influencing interpersonal choice in task**

situations. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2990.

8536. Suggs, John P. (Rutgers State U) **A study of the relationship between the job satisfaction of printers and their self and role concept.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(7-A), 4115.

8537. Swank, Calvin J. (U Alabama, Birmingham) **The police in 1980: Hypotheses for the future.** *Journal of Police Science & Administration*, 1975(Sep), Vol 3(3), 294-300.—Discusses societal forces which affect the evaluation of organizational behavior and applies the concept to police organizations. The thesis is presented that such organizations will become less traditional and more democratic.—R. J. Albers.

8538. Szura, John P. (Illinois Inst of Technology) **The effects of defensiveness self-actualization and locus-of-control on a Herzberg replication.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2991.

8539. Vessey, Thomas M. (U Minnesota) **A longitudinal study of the prediction of job satisfaction as a function of the correspondence between needs and the perceptions of job reinforcers in an occupation.** *Dissertation Abstracts International*, 1973(Nov), Vol 34(5-B), 2352-2353.

Human Factors Engineering

8540. Ackren, William B. & Korkan, Kenneth D. (AFHRL, Advanced Systems Div, Wright-Patterson AFB, OH) **Design option decision tree: A method for systematic analysis of design problems and integration of human factors data.** *US AFHRL Technical Report*, 1975(Jul), No 75-9, 19 p.—Describes a graphical format, the Design Option Decision Tree (DODT), which displays various design options available at each decision point in the design process. Examples of DODTs for aircraft design problems are outlined, and procedures for developing a DODT, a method for using the DODT to resolve a design problem, and the use of human factors data as an evaluation parameter are discussed.

8541. James, George R.; Bergquist, Andrew O. & White, Doyle D. **A miniature environmental monitor.** *USAF School of Aerospace Medicine Technical Report*, 1975(Aug), TR-75-29, 10 p.—Describes a portable measuring device for monitoring cockpit and cabin conditions during aircraft flight. Components of the small (suitcase-sized) device are described; arrangements of subunits and sensors is flexible. Results are useful in designing life support systems and in judging physiological stresses of flight.—J. Davis.

8542. Pattie, Currell L. (Purdue U) **Simulated tractor overturnings: A study of human responses in an emergency situation.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2989.

Environmental Psychology & Environmental Issues

8543. Carp, Frances M. (Wright Inst, Berkeley, CA) **Ego-defense or cognitive consistency effects on environmental evaluations.** *Journal of Gerontology*, 1975(Nov), Vol 30(6), 707-711.—Numerous investigators have commented upon the sanguine evaluations of their living environments which are given by elderly people. The discrepancy between residents' and observers' evaluations suggests the involvement of ego defense or

dissonance reduction. Insofar as this is true, old people's evaluations should become more negative when their efforts to move to a more desirable setting meet with success. This hypothesis was tested with the original group of applicants to one housing project for the elderly and cross-validated 9 yrs later with the original group of applicants to a different project. In both cases the hypothesis was supported. Applicants who were selected to move to new housing became more negative in their evaluations of housing than applicants who were not selected to move.(19 ref)—*Journal abstract*.

8544. McClannahan, Lynn E. (U Kansas) **Design of living environments for nursing home residents.** *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2972.

8545. Poulton, E. C.; Hunt, J. C.; Mumford, J. C. & Poulton, Joanna. (MRC Applied Psychology Unit, Cambridge, England) **The mechanical disturbance produced by steady and gusty winds of moderate strength: Skilled performance and semantic assessments.** *Ergonomics*, 1975(Nov), Vol 18(6), 651-673.—Two groups of 11 19-59 yr old paid females were filmed walking into a wind tunnel with inked pads on the soles of their feet. They also attempted to walk on their own footmarks and performed other tasks in the wind. Ss then made semantic assessments of their experiences. The wind was either 4 or 8.5 m/sec (force 2-3 or 4-5 on the Beaufort wind scale), with 0.5 or 12% turbulence. Each group received both levels of turbulence at a single windspeed, order being balanced over the group. Increases in both windspeed and turbulence reliably degraded performance on most tasks. Ss were blown off course on first entering the wind and sometimes lost their balance for a moment. The semantic assessments paralleled the measures of performance. However, the correlations between an S's performances and her corresponding assessments were not different from chance. This suggests that the assessments were based on what the Ss thought ought to happen, rather than on what did actually happen. Two assessments showed reliable asymmetrical transfer between the 1st and 2nd conditions; none of the measures of performance did so. The asymmetrical transfer invalidated the semantic assessments of the conditions performed second. (French & German summaries) (23 ref)—*Journal abstract*.

8546. Simon, Thomas W. (U Florida) **Control systems and teleological systems.** *Behavioral Science*, 1975(Sep), Vol 20(5), 325-330.—Establishes a systems conception for problems of the environment which serves as the foundation for 11 recommendations upon the ways in which research and development efforts in this area may beneficially be redirected. It is argued that scientific and management approaches to the environment have become fettered by a narrowness of perspective.

Marketing & Advertising

8547. Beckwith, Neil E. & Lehmann, Donald R. (Columbia U) **The importance of halo effects in multi-attribute attitude models.** *Journal of Marketing Research*, 1975(Aug), Vol 12(3), 265-275.—Data was gathered by mailed questionnaire from 2,000 heterogeneous individuals concerning 20 TV shows. A simultaneous equation model was used to explain both the

overall attitude of 1,203 respondents towards the shows and also their beliefs about the shows on 6 relevant attributes. It is concluded that the halo effect may be the primary reason for the usually good descriptive results of the multiattribute model. (52 ref)—*Journal abstract*.

8548. Bose, Sukumar & Ghosh, Amitava. (Calcutta, U, India) Efficacy of psychogalvanoscopic readings to rank appealing advertisements concurrent to preferences of "ad" readers. *Indian Journal of Applied Psychology*, 1974(Jan), Vol 11(1), 7-11.—34 postgraduate students selected 10 magazine advertisements to be used as stimuli. 20 of the Ss assigned their preferences for the advertisements, using a rank-order method, and psychogalvanoscopic readings were taken during the task. Results show a significant relationship between advertisement preferences and psychogalvanic skin response. Significant sex differences were also found in the responses. A set of advertising appeals, such as parental affection and pleasant home life, was perceived by the Ss in their evaluation of the advertisements. *Journal abstract*.

8549. Bush, Ronald F. (Arizona State U) An experiment to assess the sales response of White consumers to Black models displayed in promotional material. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4485-4486.

8550. Chevalier, Michel. (INSEAD, Fontainebleau, France) Increase in sales due to in-store display. *Journal of Marketing Research*, 1975(Nov), Vol 12(4), 426-431.—Variables related to growth or competitive structure had a significant effect on sales for different product characteristics, while market share of the test item in the product category, level of price cut, and advertising to sales had no effect on the impact of a display.

8551. Deering, Barbara J. (Purdue U) Product evaluation as a function of number of product cues and number of cue intervals. *Dissertation Abstracts International*, 1973(Dec), Vol 34(6-B), 2986-2987.

8552. Ferguson, Clara J. (North Texas State U) An investigation of preadolescent children's attitudes toward television commercials. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4489-4490.

8553. Gazda, Gregory M. (Arizona State U) A study of the attitudes of businessmen, consumers, and consumerists toward consumerism. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4490.

8554. Grablowsky, Bernie J. (Ohio State U) A behavioral model of risk in consumer credit. *Dissertation*

Abstracts International, 1974(Feb), Vol 34(8-A, Pt 1), 4490-4491.

8555. Hsu, Jende. (U Colorado) Effects of multi-car ownership on use of public transit. *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 369-370.—Survey results indicate that multi-car owners made fewer transit trips after the purchase of additional cars, although they gave transit more consideration as a transportation alternative before the purchase.

8556. Kanuk, Leslie & Berenson, Conrad. (Bernard M. Baruch Coll, City U New York) Mail surveys and response rates: A literature review. *Journal of Marketing Research*, 1975(Nov), Vol 12(4), 440-453.—A review of empirical studies concerned with increasing response rates to mail questionnaires reveals the limited evidence upon which most widely accepted techniques are based. The only techniques which seemed to be consistently effective in increasing response rates were follow-up letters and monetary incentives with the mail questionnaires. (85 ref)—*Journal abstract*.

8557. Shoemaker, Robert W. & Shoaf, F. Robert. (New York U) Behavioral changes in the trial of new products. *Journal of Consumer Research*, 1975(Sep), Vol 2(2), 104-109. The theory of perceived risk suggests that consumers can reduce the consequences of trying a new brand by buying a smaller quantity on the trial purchase than is normally bought. This study, based on longitudinal analysis of 1,480 individual new brand buyers, found that initial purchase quantities were smaller, as predicted.—*Journal Abstract*.

8558. Srinivasan, V. (Stanford U, Graduate School of Business) A general procedure for estimating consumer preference distributions. *Journal of Marketing Research*, 1975(Nov), Vol 12(4), 377-389. Presents a general procedure for estimating consumer preference distributions without having to prespecify their forms. Using linear programming, it minimizes the sum of absolute errors between observed and predicted proportions of consumer choices in paired comparison tests. (18 ref)

8559. Winter, Frederick W. (U Illinois, Urbana-Champaign) Laboratory measurement of response to consumer information. *Journal of Marketing Research*, 1975(Nov), Vol 12(4), 390-401. Results of a study using laboratory experimental procedures and objective measures of information adoption suggest that (a) information adoption is facilitated when the information is perceived as new by consumers and is presented in a simple format and (b) time cost plays a significant role in information adoption.

BRIEF SUBJECT INDEX

Index terms represent the literature covered in the last six issues of *PA*. Where there are no phrases associated with a term, See and See also references have been generated to lead the user to related areas of interest. Index entries with no listings indicate that no relevant subject matter content was contained in original documents covered in this volume.

Blood Pressure [See Also Systolic Pressure] 6437, 6456, 6468, 7637, 7695

Blood Pressure Disorders [See Hypertension, Syncope]

Blood Serum 6413, 6416, 6422, 7277, 7291, 7638, 7653, 7662

Blood Sugar 6422

Blue Collar Workers [See Also Industrial Foremen] 7614, 8524, 8534

Body (Pineal) [See Pineal Body]

Body Fluids [See Also Blood, Blood Plasma, Blood Serum, Cerebrospinal Fluid, Sweat, Urine] 6414

Body Image [See Also Body Image Disturbances] 7475, 7492

Body Image Disturbances 7254, 7282

Body Language 6651, 7076, 7131

Body Temperature [See Also Thermoregulation (Body)] 6406, 6409, 6415, 6433, 6585

Body Types [See Somatotypes]

Body Weight [See Also Obesity] 6336, 6371, 6415, 6440, 6463, 6493, 6504, 6581, 6585, 6710, 7222, 7609, 7631, 7687

Books 5960, 5966, 5974, 8117

Borderline Mentally Retarded [See Slow Learners]

Bourgeois [See Middle Class]

Bradycardia 7610

Brain [See Also Amygdaloid Body, Auditory Cortex, Brain Stem, Caudate Nucleus, Cerebral Cortex, Frontal Lobe, Geniculate Bodies (Thalamus), Hippocampus, Hypothalamus, Limbic System, Mesencephalon, Motor Cortex, Occipital Lobe, Optic Chiasm, Optic Lobe, Parietal Lobe, Pons, Reticular Formation, Somatosensory Cortex, Superior Colliculus, Temporal Lobe, Thalamic Nuclei, Thalamus, Visual Cortex] 6400, 6406

Brain Ablation [See Brain Lesions]

Brain Damage [See Also Brain Lesions, Hypothalamus Lesions] 7428

Brain Damaged [See Also Minimally Brain Damaged] 7254, 7462, 7464, 7473

Brain Disorders [See Also Alcohol Intoxication, Aphasia, Brain Damage, Brain Lesions, Cerebral Palsy, Cerebrovascular Accidents, Delirium Tremens, Epilepsy, Epileptic Seizures, Hypothalamus Lesions, Minimal Brain Disorders, Organic Brain Syndromes, Parkinson's Disease, Presenile Dementia, Senile Dementia] 5935, 7252, 7255, 7431, 7455

Brain Injury [See Brain Damage]

Brain Lesions [See Also Hypothalamus Lesions] 6447, 6448, 6465, 6467, 6487, 6488, 6489, 6490, 6492, 6495, 6497, 6499, 6501, 6502, 6503, 6505, 6506, 6507, 6509, 6510, 6511, 6512, 6513, 6514, 6515, 6516, 6517, 6518, 6519, 6520, 6522, 6524, 6525, 6526, 6527

Brain Mapping [See Stereotaxic Atlas]

Brain Maps [See Stereotaxic Atlas]

BRIEF SUBJECT INDEX

Brain Metabolism [See Neurochemistry]
Brain Size 6386
Brain Stem [See Also Pons, Reticular Formation] 6470, 6519, 7467
Brain Stimulation [See Also Chemical Brain Stimulation, Electrical Brain Stimulation, Spreading Depression] 6441
Brain Weight 6625
Breeding (Animal) [See Animal Breeding]
Brief Psychotherapy 7495, 7497, 7504, 7547, 7550, 7551, 7575
Brightness Perception 6024, 6047, 6050, 6052, 6076, 6292, 6514
Brothers 6726
Budgets [See Costs And Cost Analysis]
Bufotenine 7277
Bush Babies [See Lemurs]
Business And Industrial Personnel [See Also Blue Collar Workers, Clerical Personnel, Industrial Foremen, Management Personnel, Middle Level Managers, Sales Personnel, Top Level Managers] 6875, 8484, 8510, 8533, 8553
Business Education 8016, 8042, 8131
Business Management 6866, 8504
Businessmen [See Business And Industrial Personnel]
Buying [See Consumer Behavior]

Cadres [See Social Groups]
Caffeine 7026
Calculus [See Mathematics Education]
Calories 6455, 6493
Camping 7773
Camps (Concentration) [See Concentration Camps]

Community Attitudes 6882, 7130, 7396, 7881, 8514
Community College Students 8280, 8376, 8401, 8460
Community Colleges [See Colleges]
Community Facilities [See Community Mental Health Centers, Housing, Public Transportation]
Community Mental Health 7712, 7718
Community Mental Health Centers 7702, 7706, 7709, 7714, 7715, 7716, 7717, 7724, 7807, 7813, 7822, 7864
Community Mental Health Training 7722, 7807, 7864
Community Psychiatry 7720, 7822
Community Services [See Also Crisis Intervention Services, Home Visiting Programs] 7710, 7712, 7718, 7724, 7846
Comparative Psychology 6059, 6358, 6700
Compensatory Education 8289
Competition 6321, 6846, 6854, 6914, 7077, 7570, 8230
Complex (Oedipal) [See Oedipal Complex]
Complexity (Cognitive) [See Cognitive Complexity]
Complexity (Stimulus) [See Stimulus Complexity]
Complexity (Task) [See Task Complexity]
Compliance 6839, 7116, 7135, 7140, 7142, 7570
Comprehension [See Also Listening Comprehension, Number Comprehension, Reading Comprehension, Sentence Comprehension] 6183, 6721, 8320
Compressed Speech 6087
Compulsions [See Compulsive Repetition]
Compulsive Neurosis [See Obsessive Compulsive Neurosis]
Compulsive Repetition 7413
Computer Applications [See Also Computer Assisted Instruction, Computer Simulation] 5882, 5904, 5957, 6367, 7602, 7754, 8427, 8472
Computer Assisted Instruction 8021, 8041, 8067, 8085
Computer Programming Languages 8070
Computer Programs [See Computer Software]
Computer Simulation 5863, 5878, 5903, 8058
Computer Software 5899, 8070, 8462, 8474
Computers 7830, 8471
Concentration Camps 6963
Concept (Self) [See Self Concept]
Concept Formation 6115, 6149, 6150, 6716, 6735, 6754, 6765, 6769, 6775, 8001, 8277
Concept Learning [See Also Reversal Shift Learning] 5998, 6112, 6136, 6186, 6195, 6306, 6696, 6736, 6740, 6755, 6800, 7312, 7379, 7444, 8040, 8080, 8110, 8111, 8126
Conceptual Imagery 6164, 6759
Conceptualization [See Concept Formation]
Conditioned Emotional Responses 6484
Conditioned Reflex [See Conditioned Responses]
Conditioned Responses [See Also Conditioned Emotional Responses, Conditioned Suppression] 6169, 6266, 6456, 6472, 6480, 6598
Conditioned Stimulus 6288, 6302, 6305, 6311, 6315
Conditioned Suppression 6246, 6265, 6305, 6477, 6489, 6582
Conditioning [See Also Avoidance Conditioning, Classical Conditioning, Conditioned Emotional Responses, Conditioned Responses, Conditioned Stimulus, Conditioned Suppression, Counterconditioning, Escape Conditioning, Operant Conditioning, Unconditioned Responses, Unconditioned Stimulus] 6010, 6368, 6523, 7041
Conditioning (Avoidance) [See Avoidance Conditioning]
Conditioning (Classical) [See Classical Conditioning]
Conditioning (Escape) [See Escape Conditioning]
Conditioning (Operant) [See Operant Conditioning]
Conditioning (Verbal) [See Verbal Learning]
Confidentiality of Information [See Privileged Communication]
Conflict [See Also Violence] 6650, 6687, 7074, 7100, 7164
Conflicts (Role) [See Role Conflicts]
Conformity (Personality) 6852, 6887, 6925, 7082, 7085, 7177
Congenital Disorders 7424, 7458, 7459
Conjoint Therapy 7485, 7520, 7528
Connotations 6193
Conscious (Personality Factors) 6790
Consciousness Disturbances [See Auto-hypnosis, Hypnosis, Insomnia, Sleep Disorders]
Consciousness States [See Also Attention Awareness, Divided Attention, Monitoring, Selective Attention, Vigilance] 5871, 6104, 6410, 6462, 6771, 6902, 6944, 7247, 7772
Conservation (Concept) 6257, 6696, 6720, 6725, 6730, 6744, 6755, 6780, 6781, 6787, 7214
Conservatism 7057
Conservatism (Political) [See Political Conservatism]
Consonants 6030, 6031, 6766, 6809
Consultation (Professional) [See Professional Consultation]
Consumer Attitudes 8548, 8551, 8552, 8553, 8555, 8558, 8559
Consumer Behavior 5921, 8549, 8550, 8551, 8554, 8555, 8557, 8559
Consumer Protection 8553
Consumer Research [See Also Consumer Surveys] 5921, 8558
Consumer Surveys 8556
Content Analysis (Test) 8395
Contextual Associations 6080, 6102, 6138, 6156, 6219, 8137
Contiguity (Cognitive) [See Cognitive Contiguity]
Contingency Management 8057, 8119
Continuing Education [See Higher Education]
Continuous Reinforcement [See Reinforcement Schedules]
Contour [See Form And Shape Perception]
Contraception [See Birth Control]
Contraceptive Methods [See Birth Control]
Contribution (Professional) [See Professional Contribution]
Control (Locus of) [See Internal External Locus of Control]
Control (Stimulus) [See Stimulus Control]
Convergent Thinking [See Inductive Deductive Reasoning]
Conversation 6826, 7041, 7054, 7059
Conviction (Criminal) [See Criminal Conviction]
Convulsions 6233, 6445, 6471, 6483, 6571
Cooperation 6833, 6854, 6943, 7078, 7092, 7164, 7570, 7604, 8081, 8230
Coordination (Motor) [See Motor Coordination]
Coordination (Perceptual Motor) [See Perceptual Motor Coordination]
Coping Behavior 6004, 6824, 7202, 7245, 7308, 7427, 7488, 8368
Copulation [See Sexual Intercourse (Human)]
Copulation (Animal) [See Animal Mating Behavior]
Cornea 6071
Corpora Quadrigemina [See Optic Lobe, Superior Colliculus]
Correctional Institutions [See Also Prisons] 7343, 7757, 7775
Correlation (Statistical) [See Statistical Correlation]
Cortex (Auditory) [See Auditory Cortex]
Cortex (Cerebral) [See Cerebral Cortex]
Cortex (Motor) [See Motor Cortex]
Cortex (Somatosensory) [See Somatosensory Cortex]
Cortex (Visual) [See Visual Cortex]
Cortical Evoked Potentials 6034, 6368, 6389, 6394, 6400, 6475
Corticosteroids [See Prednisolone]
Corticotropin 6622, 6642, 7638
Costs And Cost Analysis 7961, 8288
Counselors [See Clients]
Counseling (Group) [See Group Counseling]
Counseling [See Also Related Terms] 5876, 7486, 7507, 7516, 7519, 7523, 7524

BRIEF SUBJECT INDEX

- 7530, 7531, 7537, 7544, 7548, 7729, 7731, 7734, 8359
Counselor Attitudes 7840, 7845, 7947, 8376
Counselor Characteristics 7131, 7493, 7496, 7500, 7531, 7532, 7728, 7787, 7806, 7816, 7826, 7833, 7841, 7842, 7847, 7849, 7941, 7956, 8338, 8347, 8366, 8380, 8392, 8394, 8399, 8413
Counselor Client Interaction [See Psychotherapeutic Processes]
Counselor Education 7516, 7518, 7802, 7804, 7810, 7811, 7816, 7820, 7821, 7826, 7833, 7837, 7838, 7840, 7841, 7847, 7849, 7850, 7851, 7856, 7861, 7863, 7866, 7921, 7956
Counselor Effectiveness [See Counselor Characteristics]
Counselor Personality [See Counselor Characteristics]
Counselor Role 7566, 7768, 7834, 7929, 7932, 8300, 8347, 8374, 8376, 8402, 8455
Counselor Trainees 7534, 7810, 7811, 7820, 7821, 7833, 7837, 7838, 7841, 7847, 7850, 7851, 7863, 7921, 8347, 8393
Counselors [See Also School Counselors, Vocational Counselors] 7480, 7534, 7787, 7834, 7844, 7849, 7856, 7919, 7931
Counterconditioning 7618, 7629
Countertransference 7843
Countries 6871, 7361
County Agricultural Agents [See Agricultural Extension Workers]
Courts [See Adjudication]
Courtship (Animal) [See Animal Courtship Behavior]
Crabs 6360
Cranial Nerves [See Optic Nerve]
Craving [See Appetite]
Creative Writing [See Literature]

- Illness (Physical)** [See Disorders]
- Illumination** 5996, 6017, 6021, 6050, 6052, 6228, 6232, 6241, 6273, 6296, 6402, 6406, 6451, 6710, 6803, 7300, 8097
- Illusions (Perception)** [See Also Afterimage, Perceptual Aftereffect] 6022, 6028, 6032, 6040, 6041, 6056, 6065, 6089, 6747
- Image (Body)** [See Body Image]
- Image (Retinal)** [See Retinal Image]
- Imagery** [See Also Conceptual Imagery] 5980, 6114, 6132, 6163, 6222, 6435, 6724, 6729, 6759, 6773, 7410, 7538, 7610, 8155
- Imagery (Conceptual)** [See Conceptual Imagery]
- Imagery** [See Conceptual Imagery]
- Imagination** 6015
- Imbeciles** [See Severely Mentally Retarded, Trainable Mentally Retarded]
- Impramine** 6644, 7484, 7680
- Imitation (Learning)** 6134, 6188, 6706, 6722, 6742, 6772, 6786, 6802, 6827, 6834, 6843, 6844, 6848, 7039, 7060, 7077, 7158, 7557, 7589, 7620, 7623, 7690, 7692, 7785, 8064, 8098, 8380, 8392
- Immigrants** [See Immigration]
- Immigration** 6919, 6930
- Immunologic Disorders** [See Drug Allergies]
- Impotence** 7619
- Imprinting** 6254, 6301
- Impulsiveness** 6103, 6111, 6124, 6698, 6705, 6775, 7212, 7302, 7335, 7350, 7358, 7487, 8077, 8314
- Incentives** [See Also Educational Incentives, Monetary Incentives] 6210, 6297, 6345, 7034, 7114, 8308
- Incest** 6993, 7573
- Incidental Learning** 6155, 6192, 6810, 8155, 8180
- Income Level** [See Also Lower Income Level] 6959, 7215
- Incontinence (Fecal)** [See Fecal Incontinence]
- Incontinence (Urinary)** [See Urinary Incontinence]
- Independence (Personality)** 5933, 6824, 6887, 7526, 8168, 8209
- India** 5928, 6876, 6892, 6969, 6970, 7366, 8204, 8500
- Indians (American)** [See American Indians]
- Individual Counseling** [See Individual Psychotherapy]
- Individual Differences** 6068, 6094, 6119, 6436, 7063, 7066, 7089, 7240, 7348, 8211
- Individual Psychotherapy** 7485, 7497, 7755
- Individual Therapy** [See Individual Psychotherapy]
- Individualism** [See Individuality]
- Individuality** 6929, 7593
- Individualized Instruction** 7821, 7980, 7983, 8015, 8016, 8025, 8028, 8043, 8068, 8085, 8119, 8139, 8307, 8311, 8390
- Induced Abortion** 7699
- Inductive Deductive Reasoning** [See Also Inference] 6099, 6136, 6762, 7993, 8336, 8388
- Industrial Accidents** 7755, 8503, 8542
- Industrial Foremen** 8503
- Industrial Personnel** [See Business And Industrial Personnel]
- Industrialization** 6842, 6903, 6992
- Infancy** [See Infants]
- Infant Development** [See Also Neonatal Development] 6694, 6711, 6767, 6780, 6798, 6841
- Infant Vocalization** 6690, 6821
- Infantile Psychosis** [See Childhood Psychosis]
- Infants** [See Also Neonates] 6693, 6694, 6710, 6711, 6719, 6766, 6780, 6788, 6798, 6802, 6821, 6826, 6841, 6847, 6965, 6966, 7072
- Infarctions (Myocardial)** [See Myocardial Infarctions]
- Infectious Disorders** [See Rubella]
- Inference** 6756, 6806, 6818, 6981, 7166, 7871
- Infirmaries** [See Hospitals]
- Influence (Interpersonal)** [See Interpersonal Influences]
- Influences (Social)** [See Social Influences]
- Information Exchange** 6656, 7130
- Information Processes (Human)** [See Cognitive Processes]
- Information Processing (Automated)** [See Automated Information Processing]
- Information Retrieval (Automated)** [See Automated Information Retrieval]
- Information Seeking** 6005, 6092, 6111, 6116, 6210, 6654, 6655, 6733, 7161, 7228, 7387, 8460
- Information Storage (Human)** [See Human Information Storage]
- Information Theory** 6116
- Inhibition (Proactive)** [See Proactive Inhibition]
- Inhibition (Retractive)** [See Retractive Inhibition]
- Initiative** 7032, 8015, 8250
- Injections** [See Intraperitoneal Injections]
- Injuries** [See Also Head Injuries] 7427, 7755
- Inmates (Prison)** [See Prisoners]

BRIEF SUBJECT INDEX

Inner City [See Urban Environments]
Innovativeness [See Creativity]
Insanity [See Mental Disorders, Psychosis]
Insecurity (Emotional) [See Emotional Security]
Insensitivity (Personality) [See Sensitivity (Personality)]
Inservice Teacher Education 7895, 7924, 7943, 7951, 7965, 7970
Insight 7588, 7601
Insomnia 7639, 7666
Instinctive Behavior (Animal) [See Animal Instinctive Behavior]
Institutionalization [See Also Hospital Admission, Hospital Discharge, Hospitalization, Psychiatric Hospital Admission, Psychiatric Hospital Readmission, Psychiatric Hospitalization] 5873, 6701, 6768, 7212, 7228
Institutionalized Mentally Retarded 7379, 7401, 7403, 7678, 7736, 8306
Institutions (Correctional) [See Correctional Institutions]
Institutions (Residential Care) [See Residential Care Institutions]
Instruction [See Teaching]
Instruction (Computer Assisted) [See Computer Assisted Instruction]
Instruction (Individualized) [See Individualized Instruction]
Instruction (Programed) [See Programed Instruction]
Instructional Media [See Also Educational Audiovisual Aids, Reading Materials, Teaching Machines] 7981, 8176
Instructions (Experimental) [See Experimental Instructions]
Instructors [See Teachers]
Instrumental Conditioning [See Operant Conditioning]
Instrumental Learning [See Operant Conditioning]
Instrumentation (Flight) [See Flight Instrumentation]
Insulin 6521, 6543, 7291
Insurance Agents [See Sales Personnel]
Integration (Racial) [See Racial Integration]
Intellectual Development [See Also Language Development] 6704, 6709, 6718, 6732, 7459
Intellectually Gifted [See Gifted]
Intelligence 5944, 6101, 6121, 6134, 6389, 6416, 6660, 6707, 7040, 7212, 7237, 7254, 7289, 7374, 7421, 7455, 7507, 8137, 8159, 8162, 8167, 8181, 8297, 8348, 8381, 8404, 8432, 8434
Intelligence Measures [See Also Hidden Figures Test, Illinois Test Psycholinguist Abil, Peabody Picture Vocabulary Test, Porteus Maze Test, Stanford Binet Intelligence Scale, Wechsler Adult Intelligence Scale, Wechsler Intelligence Scale (Children)] 5909, 5930, 6976, 7188, 7440, 8334, 8352, 8362, 8493
Intelligence Quotient 6725, 6738, 7440, 7874, 8040, 8315
Intelligence Scales [See Intelligence Measures]
Intensity (Stimulus) [See Stimulus Intensity]
Intentional Learning 6810, 6813
Interaction (Interpersonal) [See Interpersonal Interaction]

Interaction (Social) [See Social Interaction]
Intercourse (Sexual) [See Sexual Intercourse (Human)]
Interdisciplinary Treatment Approach 7707, 7782
Interest Patterns 7338, 8235, 8304
Interests [See Also Occupational Interests] 5983, 7093, 8147, 8320
Interference (Learning) [See Also Proactive Inhibition, Retroactive Inhibition] 5981, 6159, 6167, 6171, 6236, 6278, 6490, 7286
Intergroup Dynamics 7049, 7073, 7074, 7098
Intermittent Reinforcement [See Reinforcement Schedules]
Internal External Locus of Control 5919, 6132, 6214, 6412, 6752, 6814, 6920, 6936, 6986, 7108, 7143, 7165, 7178, 7181, 7183, 7191, 7216, 7226, 7228, 7236, 7279, 7340, 7346, 7606, 7609, 7802, 7879, 8021, 8057, 8123, 8158, 8178, 8245, 8289, 8332, 8367, 8420, 8459, 8469, 8488, 8531, 8538
Interpersonal Attraction 6706, 6943, 6950, 7058, 7069, 7089, 7105, 7122, 7127, 7131, 7136, 7169, 7170, 7728
Interpersonal Communication [See Also Bargaining, Body Language, Conversation, Eye Contact, Group Discussion, Interviewing, Interviews, Negotiation, Parent Child Communication, Psychodiagnostic Interview] 6652, 6654, 6872, 6950, 7070, 7071, 7084, 7086, 7089, 7101, 7104, 7162, 7165, 7180, 7239, 7407, 7570, 7597, 7599, 7858, 7885, 7935, 8208, 8515
Interpersonal Influences 6822, 6843, 6911, 6971, 6986, 7053, 7055, 7062, 7099, 7101, 7103, 7164, 7171, 7177, 7229, 7507, 8212, 8213, 8215, 8219
Interpersonal Interaction [See Also Assistance (Social Behavior), Bargaining, Collective Behavior, Conflict, Conversation, Cooperation, Eye Contact, Friendship, Group Discussion, Group Participation, Group Performance, Interpersonal Attraction, Interpersonal Communication, Interpersonal Influences, Interviewing, Interviews, Negotiation, Participation, Peer Relations, Persecution, Psychodiagnostic Interview, Social Dating, Violence] 5936, 6633, 6652, 6700, 6732, 6822, 6826, 6844, 6884, 6917, 7005, 7046, 7050, 7052, 7060, 7061, 7066, 7067, 7068, 7069, 7071, 7077, 7106, 7113, 7126, 7128, 7135, 7149, 7244, 7245, 7315, 7347, 7369, 7448, 7548, 7591, 7598, 7604, 7623, 7741, 7814, 7890, 7929, 8046, 8131, 8206, 8259, 8272, 8431, 8510, 8530, 8535
Interpersonal Perception [See Social Perception]
Interpretation (Psychoanalytic) [See Psychoanalytic Interpretation]
Interresponse Time 6307, 6557, 6644
Interstimulus Interval 5991, 5993, 6083, 6151, 6179, 6181, 6242, 6256, 6299, 6383, 6523, 7402
Interval Interval 6139, 6156, 6299, 6346, 6638
Interval Reinforcement [See Fixed Interval Reinforcement, Variable Interval Reinforcement]
Intervals (Stimulus) [See Stimulus Intervals]
Interviewing 7051, 7220, 7505, 7507, 7821, 7841

Interviews [See Also Psychodiagnostic Interview] 7052, 7091, 7232, 7730
Intimacy 6915, 6972, 7090, 7105, 7247
Intoxication (Alcohol) [See Alcohol Intoxication]
Intraperitoneal Injections 6445
Intrinsic Motivation 8513
Introspection 8384
Introversion 7184, 7238, 7727, 7983
Intuition 8341
Inventories [See Biographical Inventories]
Inventories (Attitude) [See Attitude Measures]
Inventories (Personality) [See Personality Measures]
Inventories (Preference) [See Preference Measures]
Invertebrates [See Crabs, Crustacea, Planarians]
Investigation [See Experimentation]
Involvement 6862, 7471, 7710, 7950, 8372
Ions [See Electrolytes]
Ireland 6866, 7786, 8170
Iron 6441
Irradiation [See Radiation]
Ischemia [See Cerebral Ischemia]
Isolation (Social) [See Social Isolation]
Israel 6752, 6882, 6916, 6962
Italy 6934, 7134
Item Analysis (Statistical) 5940

Jails [See Prisons]
Japan 6663, 6831, 8305
Jews [See Judaism]
Job Analysis 7738, 7856, 8448, 8462, 8478, 8490, 8494, 8500
Job Applicant Screening 7285, 8476, 8484
Job Applicant Testing [See Job Applicant Screening]
Job Descriptions [See Job Analysis]
Job Enrichment 8522
Job Experience Level 6862, 8133, 8491, 8507, 8509
Job Mobility [See Occupational Mobility]
Job Performance [See Also Employee Productivity] 7119, 7859, 7894, 7919, 7947, 8466, 8479, 8480, 8481, 8483, 8484, 8485, 8488, 8489, 8490, 8492, 8493, 8506, 8507, 8509, 8511, 8513, 8515, 8531
Job Performance Evaluation [See Job Performance, Personnel Evaluation]
Job Requirements [See Job Analysis]
Job Satisfaction 7214, 7745, 7899, 7908, 7942, 7944, 8513, 8516, 8517, 8522, 8523, 8525, 8526, 8531, 8534, 8536, 8538, 8539
Job Selection [See Occupational Choice]
Jobs [See Occupations]
Joint Disorders [See Arthritis, Rheumatoid Arthritis]
Joints (Anatomy) 6370, 6379
Joy [See Happiness]
Judaism 6765, 6915, 6938, 7987, 8517
Judgment 6093, 6108, 6153, 7170
Judo 8013
Jung (Carl) 8253
Jungian Psychology 7976
Junior College Students 6920, 6987, 7031, 7236, 8381
Junior Colleges [See Colleges]
Junior High School Students 5932, 7019, 7986, 8039, 8040, 8045, 8054, 8056, 8065, 8068, 8074, 8098, 8099, 8104, 8107, 8119,

BRIEF SUBJECT INDEX

- 8122, 8137, 8187, 8188, 8195, 8210, 8212, 8236, 8242, 8245, 8251, 8256, 8271, 8279, 8319, 8325, 8333, 8352, 8364, 8380, 8384, 8395, 8399, 8405, 8423, 8424, 8426, 8427, 8434
Junior High School Teachers 7924, 7937, 8212, 8227, 8242
Junior High Schools 7945
Jury [See Adjudication]
Justice 6829, 6980, 7819
Juvenile Court [See Adjudication]
Juvenile Delinquency 7349, 7756, 8233
Juvenile Delinquents [See Also Female Delinquents, Male Delinquents] 7261, 7350, 7565, 7576, 7758, 8245
Keypunch Operators [See Clerical Personnel]
Kindergarten Students 7982, 7988, 8005, 8011, 8047, 8075, 8100, 8118, 8129, 8144, 8198, 8288, 8335, 8348, 8432
Kindergartens 8089
Kinesthetic Perception 5981, 6131, 7299, 7445, 7453, 8472
Kinship Structure 6961, 7075
Knee 6370, 6379
Knowledge of Results 6001, 6002, 6199, 8417, 8487
L Dopa [See Levodopa]
Labor Union Members 8523
Laboratories (Educational) [See Educational Laboratories]
Laboratories (Experimental) [See Experimental Laboratories]
Laborers (Construct And Indust) [See Blue Collar Workers]
Laborers (Farm) [See Agricultural Workers]
Lag (Response) [See Reaction Time]
Language [See Also Adjectives, Antonyms, Bilingualism, Consonants, Conversation, Dialect, Ethnolinguistics, Foreign Languages, Form Classes (Language), Grammar, Handwriting, Handwriting Legibility, Language Development, Letters (Alphabet), Linguistics, Literacy, Monolingualism, Morphology (Language), Nonstandard English, Nouns, Numbers (Numerals), Orthography, Phonemes, Phonetics, Phonology, Phrases, Pronouns, Psycholinguistics, Public Speaking, Semantics, Sentence Structure, Sentences, Syllables, Syntax, Vocabulary, Words (Phonetic Units), Written Language] 6663, 6667, 7286, 7402, 7436, 8009, 8320
Language Arts Education [See Also Phonics, Reading Education, Spelling] 8273
Language Development 6661, 6737, 6742, 6751, 6753, 6772, 6778, 6792, 6795, 6808, 7271, 7394, 7412, 7421, 7425, 7432, 7482, 7692, 8018, 8029, 8079, 8316
Latency (Response) [See Response Latency]
Lateral Dominance 5860, 6011, 6029, 6048, 6435, 6526, 6727, 7420, 7428, 7441, 8146
Law (Government) [See Criminal Law]
Law Enforcement Personnel [See Also Police Personnel, Probation Officers] 6977, 8444, 8446, 8502, 8532
Laws [See Also Abortion Laws, Drug Laws] 7803, 7834, 8236
Lawyers [See Attorneys]
Lead (Metal) 6536, 7257
Leadership [See Also Leadership Style] 6906, 7064, 7086, 7093, 7132, 7133, 7239, 7854, 7890, 7904, 7937, 8123, 8168, 8498, 8508
Leadership Style 7056, 7235, 7562, 7600, 7822, 7898, 7899, 7902, 7905, 7919, 7933, 7944, 7974, 8238, 8497, 8501, 8506, 8511
Learning (Programed) [See Programed Instruction]
Learning Ability 6536
Learning Centers (Educational) 7877, 8004
Learning Disabilities [See Also Dyslexia] 5943, 6003, 7381, 7389, 7392, 7402, 7408, 7409, 7412, 7421, 7895, 8295, 8305, 8313, 8330, 8335, 8389, 8402
Learning Disorders [See Also Dyslexia, Learning Disabilities, Reading Disabilities] 7690
Learning Rate 6208, 6712, 6745, 8028, 8138
Learning Schedules [See Also Distributed Practice, Massed Practice] 6199, 6312
Learning [See Also Related Terms] 5956, 6771
Least Preferred Coworker Scale 8508
Lecture Method 6139, 7983, 7998, 8034, 8035, 8066, 8087, 8285
Legal Arrest 7029
Legal Processes [See Also Adjudication, Expert Testimony, Legal Arrest, Legislative Processes, Parole, Probation] 6976, 6980, 6981, 6983, 7504, 7803, 7828, 7834, 8236
Legibility (Handwriting) [See Handwriting Legibility]
Legislative Processes 5950
Leisure Time 7214, 7221, 8216, 8523
Lemurs 6488
Lesions [See Also Brain Lesions, Hypothalamus Lesions, Neural Lesions] 6498
Letters (Alphabet) 6053, 6061, 6104, 6123, 6124, 6137, 6191, 6668, 6809, 8012
Leukemias 7438
Levodopa 6552, 7649
Libido 6675
Librium [See Chlordiazepoxide]
Life Experiences 6861, 6928, 7221, 7228, 7245, 7258, 7275, 7290, 7311, 7337, 7777, 8218
Life Style [See Personality Processes]
Light [See Illumination]
Limbic System [See Also Amygdaloid Body, Hippocampus, Olfactory Bulb] 7310
Limen [See Thresholds]
Linear Regression 5963, 5969, 8447
Linguistics [See Also Adjectives, Antonyms, Consonants, Ethnolinguistics, Form Classes (Language), Grammar, Letters (Alphabet), Morphology (Language), Nouns, Orthography, Phonemes, Phonetics, Phonology, Phrases, Pronouns, Psycholinguistics, Semantics, Sentence Structure, Sentences, Syllables, Syntax, Words (Phonetic Units)] 6082, 6118, 7415, 7423, 7432, 7995
Lipid Metabolism Disorders 7463
Lipids [See Also Fatty Acids] 6458
Lipoproteins 7463
Listening [See Auditory Perception]
Listening Comprehension 6086, 6087, 6666, 6808, 8011, 8083, 8136, 8175, 8182
Literacy 6811
Literature [See Also Autobiography, Poetry, Prose] 6674, 6675, 6677, 6679, 6680, 6685, 6687, 6688, 7450
Literature Review 5989, 6410, 6426, 6589, 6651, 6656, 6712, 6873, 7020, 7334, 7342, 7538, 7622, 7654, 7693, 7725, 7818, 7870, 8124, 8157, 8456, 8556
Lithium 6619, 6637, 7647, 7669
Lithium Carbonate 7494, 7648, 7651, 7655, 7670, 7677
Lizards 6329
Local Anesthetics [See Cocaine]
Localization (Sound) [See Auditory Localization]
Locus of Control [See Internal External Locus of Control]
Logical Thinking 6692, 6699, 6807, 7386, 7871
Loneliness 7224
Long Term Memory 6135, 6162, 6176, 6769, 6785
Longevity [See Aged, Physiological Aging]
Longitudinal Studies 6709, 6841, 6845, 6900, 7033, 7068, 7311, 7416, 7469, 7519, 8386, 8539
Loudness [See Also Noise Levels (Work Areas)] 6085, 7692
Loudness Perception 6085
Loudness Threshold [See Auditory Thresholds]

- Physical Therapy** 7696
- Physical Trauma** [See Injuries]
- Physical Treatment Methods** [See Also Acupuncture, Adrenalectomy, Hemispherectomy, Hemodialysis, Induced Abortion, Male Castration, Medical Treatment (General), Neurosurgery, Ovariectomy, Plastic Surgery, Surgery, Sympathectomy] 7700, 7705
- Physically Handicapped** 7128, 7435, 7449, 7472, 7497, 7613, 7696, 7761, 7771, 7889, 8298
- Physically Ill Patients** [See Patients]
- Physicians** [See Also Family Physicians, Gynecologists, Psychiatrists] 6649, 7225, 7375, 7744, 7770
- Physiological Aging** 6701, 6702, 6723
- Physiological Arousal** 6183, 6198, 6366, 6390, 6401, 6411, 6430, 6436, 6587, 7007, 7134, 7974
- Physiological Correlates** 6018, 6231, 6356, 6388, 6426, 6431, 6995, 7273
- Physiological Psychology** [See Neuropsychology]
- Physiological Stress** 6419, 7880
- Physiotherapy** [See Physical Therapy]
- Physique** [See Also Body Weight, Obesity] 6837
- Physothigmine** 6540, 6556
- Plaget (Jean)** 6789

BRIEF SUBJECT INDEX

- Piagetian Tasks 6755, 6791, 6807, 6816
 Picketing [See Social Demonstrations]
 Picrotoxin 6584
 Pigeons 6251, 6253, 6255, 6260, 6263, 6271, 6276, 6278, 6281, 6291, 6293, 6298, 6307, 6312, 6313, 6314, 6357, 6464, 6497, 6526, 6620, 6644
 Pigments 6359
 Pigs 6234
 Pilocarpine 6556
 Pilots (Aircraft) [See Aircraft Pilots]
 Pineal Body 6515
 Pitch (Frequency) [See Also Speech Pitch] 6082, 6083, 6085, 6253, 6375, 6767
 Pitch Discrimination 5985
 Pitch Perception [See Also Pitch Discrimination] 6085, 6090
 Pituitary Disorders [See Hypopituitarism]
 Pituitary Dwarfism [See Hypopituitarism]
 Pituitary Hormones [See Also Corticotropin] 7638
 PKU (Hereditary Disorder) [See Phenylketonuria]
 Planarians 6347
 Plasma (Blood) [See Blood Plasma]
 Plastic Surgery 7686
 Platelets (Blood) [See Blood Platelets]
 Play [See Recreation]
 Play (Animal) [See Animal Play]
 Play Development (Childhood) [See Childhood Play Development]
 Play Therapy 7508
 Pleasure 7050, 7058, 7275
 Plethysmography [See Electroplethysmography]
 Poetry 6107, 6682, 8059
 Police Personnel 6879, 6900, 7345, 7465, 7591, 7597, 7598, 7599, 7846, 7871, 8444, 8446, 8483, 8485, 8514, 8519, 8531, 8532, 8537, 8539
 Policy Making (Government) [See Government Policy Making]
 Political Attitudes [See Also Political Conservatism, Political Radicalism] 6858, 6867, 6868, 6870, 6979, 7100, 7211, 7855
 Political Candidates 5908, 5925, 6985, 7100
 Political Conservatism 7211
 Political Divisions (Geographic) [See Geography]
 Political Economic Systems [See Capitalism, Communism, Socialism]
 Political Elections 6985, 6987
 Political Processes [See Political Elections, Voting Behavior]
 Political Radicalism 6859
 Politics [See Political Attitudes, Political Candidates, Political Elections, Voting Behavior]
 Pollution 8449
 Polygraphs 8439
 Pons 6529, 6539, 7431
 Popularity [See Social Approval]
 Population [See Also Overpopulation, Population (Statistics)] 7718
 Population (Statistics) 7264
 Population Characteristics [See Demographic Characteristics]
 Population Control [See Birth Control]
 Porteus Maze Test 7358
 Positive Reinforcement [See Also Praise] 6140, 6208, 6314, 6492, 7040, 7117, 7238, 7303, 7318, 7319, 7621, 8250, 8281, 8290
 Positive Transfer 6292
 Postgraduate Training [See Clinical Psychology Grad Training]
 Postnatal Period 6296
 Postpartum Depression 7287, 7520
 Posttreatment Followup 7553, 7794
 Posture 7558
 Potential (Achievement) [See Achievement Potential]
 Potentials (Evoked) [See Evoked Potentials]
 Potentiation (Drugs) [See Drug Potentiation]
 Poverty 6753, 6891, 6967, 7382, 7869
 Poverty Areas 7783
 Power 7005, 7151, 7167, 7203, 7279
 Practice [See Also Distributed Practice, Massed Practice] 5982, 5987, 5993, 6014, 6102, 6181, 6187, 6194, 6764, 7920
 Practice Effects 6090, 6380, 6439, 8122
 Praise 6161, 6174, 7106, 8005, 8173, 8227
 Prayer 6944
 Precognition 5862
 Prediction [See Also Occupational Success Prediction] 6987, 7063, 7145, 7350, 8171, 8364
 Prediction Errors [See Type I Errors]
 Predictive Validity 5925, 5943, 7035, 7479, 7898, 8358, 8370, 8398, 8435
 Predisposition 7452
 Prednisolone 6533
 Preference Measures [See Also Least Preferred Coworker Scale] 5918, 5925
 Preferences [See Also Aesthetic Preferences, Food Preferences, Occupational Preference] 5987, 6129, 6197, 6216, 6261, 6319, 6620, 6655, 6942, 7004, 7158, 7395, 7493, 7837, 7842, 7963, 8012, 8031, 8139, 8457
 Preferred Rewards 6215, 7236, 8308
 Pregnancy 6571, 6625, 6958, 6991, 7000, 7287, 7324, 7479
 Prehension [See Motor Development]
 Prejudice [See Also Religious Prejudices] 6914, 6931, 7049, 7119, 7163, 7855, 7999, 8331
 Preliminary Scholastic Aptitude Test [See Coll Ent Exam Bd Scholastic Apt Test]
 Premarital Intercourse 6938, 6991
 Premature Birth 6710, 6711
 Prenatal Development [See Also Embryo, Prenatal Developmental Stages] 6230, 6463, 6534, 6571, 6689, 8143
 Prenatal Developmental Stages [See Also Embryo] 6636
 Preschool Age Children 5909, 5923, 5930, 5944, 6101, 6140, 6158, 6175, 6178, 6196, 6695, 6696, 6700, 6703, 6706, 6707, 6714, 6715, 6716, 6722, 6724, 6727, 6728, 6733, 6737, 6739, 6744, 6750, 6754, 6755, 6756, 6757, 6758, 6765, 6769, 6772, 6773, 6774, 6776, 6777, 6778, 6779, 6781, 6783, 6786, 6794, 6795, 6797, 6799, 6801, 6802, 6804, 6805, 6806, 6808, 6809, 6810, 6813, 6825, 6827, 6828, 6830, 6834, 6835, 6838, 6839, 6849, 6851, 6853, 6949, 6952, 6953, 6954, 6997, 7072, 7101, 7158, 7237, 7257, 7267, 7312, 7318, 7364, 7421, 7436, 7438, 7508, 7611, 7625, 7635, 8010, 8018, 8022, 8029, 8079, 8083, 8128, 8162, 8198, 8259, 8287, 8289, 8349
 Preschool Education 6805, 8018, 8047, 8079, 8083, 8089
 Presenile Dementia 7442, 7455
 Presentation Methods [See Stimulus Presentation Methods]
 Presentation Modes [See Stimulus Presentation Methods]
 Pressure (Barometric) [See Atmospheric Conditions]
 Pressure (Blood) [See Blood Pressure]
 Pressure (Systolic) [See Systolic Pressure]
 Prevention [See Also Related Terms] 7297
 Priests 8516
 Primacy Effect 6133
 Primary Mental Health Prevention 7713, 7719, 7722, 7737, 8020, 8403
 Primates (Nonhuman) [See Also Baboons, Chimpanzees, Monkeys] 5896, 6334, 6348, 6700
 Printed Communications Media [See Books, Magazines, Newspapers]
 Prismatic Stimulation 6009, 6072
 Prisoners 7014, 7241, 7338, 7339, 7373, 7759, 7775
 Prisons 7762, 7768
 Privacy 6968, 7047
 Private School Education 8187, 8279, 8412
 Privileged Communication 7803
 Proactive Inhibition 6142, 6156, 6180, 6193, 6569
 Probability [See Also Statistical Probability] 5968, 5990, 6116, 6812, 7034, 7042, 7114
 Probability Learning 6155, 6172
 Probation 6980, 7556, 7565, 7766
 Probation Officers 7556, 7565, 7767
 Problem Drinking 7028, 7029, 7371, 7790, 7791
 Problem Solving [See Also Group Problem Solving] 6093, 6099, 6102, 6109, 6110, 6111, 6127, 6149, 6150, 6380, 6705, 6717, 6726, 6764, 6787, 6794, 7057, 7278, 7387, 7397, 8015, 8019, 8045, 8070
 Process Schizophrenia [See Schizophrenia]
 Productivity (Employee) [See Employee Productivity]
 Professional Communication [See Scientific Communication]
 Professional Consultation [See Also Mental Health Consultation] 6649, 6691, 7742, 8300, 8339, 8422
 Professional Contribution 5863, 6095, 6280, 6404, 7062, 7103, 8417
 Professional Criticism 5916, 5955, 5966, 5974, 5992, 6125, 6715, 7120, 7250, 7301, 7367, 8007
 Professional Criticism Reply 5960, 5975, 5984, 6750, 7152, 7155, 7344
 Professional Ethics 7504, 7803, 7828, 7831, 7848
 Professional Meetings And Symposia 6663, 6672, 7843
 Professional Newsletters [See Scientific Communication]
 Professional Referral 8382
 Professional Standards 7805, 7828, 7834, 7839, 7848, 7855, 7960
 Professors [See College Teachers]
 Profiles (Measurement) 5910, 6018, 8494
 Profoundly Mentally Retarded 7383, 7403, 7611, 8306
 Progesterone 6443, 6444, 6459, 6515, 6635, 7469
 Prognosis 7298, 7307, 7317, 7324, 7357, 7487, 7752, 7770
 Program Evaluation (Educational) [See Educational Program Evaluation]

BRIEF SUBJECT INDEX

Program Evaluation (Mental Health) [See Mental Health Program Evaluation]
 Program Planning (Educational) [See Educational Program Planning]
 Programed Instruction 7998, 8004, 8019, 8041, 8106, 8114, 8118, 8293
 Programing (Computer) [See Computer Software]
 Programing Languages (Computer) [See Computer Programing Languages]
 Programs (Government) [See Government Programs]
 Programs (Mental Health) [See Mental Health Programs]
 Project Follow Through 8051
 Project Head Start 6853, 8029, 8079, 8152
 Projective Personality Measures [See Also Bender Gestalt Test, Human Figures Drawing, Rorschach Test, Thematic Apperception Test] 5919, 5942, 7250, 7472, 7812, 8299
 Projective Techniques [See Also Bender Gestalt Test, Human Figures Drawing, Projective Personality Measures, Rorschach Test, Thematic Apperception Test] 7287, 7293, 7479, 8404
 Projective Tests [See Projective Techniques]
 Prolixin [See Fluphenazine]
 Promiscuity [See Also Prostitution] 7310
 Pronouns 6784
 Pronunciation 8134
 Propaganda 6653
 Propranolol 7655
 Prose [See Also Autobiography] 6145, 6147, 8019, 8091, 8167
 Prostate 6607
 Prostitution 6875
 Protein Metabolism 6423, 6559, 6637
 Proteins 6466, 6475, 6566
 Protest (Student) [See Student Activism]
 Protestantism 6765
 Psychedelic Drugs [See Lysergic Acid Diethylamide]
 Psychiatric Classification (Process) [See Psychodiagnosis]
 Psychiatric Classifications (Taxon) [See Psychodiagnostic Typologies]
 Psychiatric Clinics 7647
 Psychiatric Disorders [See Mental Disorders]
 Psychiatric History [See Patient History]
 Psychiatric Hospital Admission [See Also Psychiatric Hospital Readmission] 7754, 7786
 Psychiatric Hospital Programs [See Also Therapeutic Community] 7737, 7741, 7743, 7749
 Psychiatric Hospital Readmission 7289, 7309, 7752
 Psychiatric Hospital Staff 7742, 7824, 7830, 7852
 Psychiatric Hospitalization [See Also Psychiatric Hospital Admission, Psychiatric Hospital Readmission] 6874, 7671, 7702, 7740, 7746, 7753
 Psychiatric Hospitals 7706, 7824, 7852
 Psychiatric Nurses 7822
 Psychiatric Patients 5875, 6627, 6631, 6874, 6882, 7268, 7273, 7278, 7279, 7285, 7286, 7289, 7290, 7291, 7294, 7296, 7303, 7309, 7323, 7331, 7341, 7479, 7484, 7487, 7490, 7494, 7514, 7542, 7554, 7574, 7623, 7636, 7646, 7648, 7662, 7664, 7702, 7704, 7706, 7709, 7714, 7740, 7741, 7743

 Psychiatrists 7768, 7813, 7831, 7832, 7855
 Psychiatry [See Also Community Psychiatry, Forensic Psychiatry, Social Psychiatry] 7481, 7503, 7522
 Psychic Energizers [See Imipramine]
 Psychoanalysis 7243, 7508, 7725
 Psychoanalytic Interpretation 6674, 6675, 6676, 6677, 6678, 6679, 6680, 6681, 6682, 6685, 6686, 6687
 Psychoanalytic Personality Factors [See Conscious (Personality Factors), Ego, Libido, Oedipal Complex, Subconscious]
 Psychoanalytic School (Freudian) [See Freudian Psychoanalytic School]
 Psychoanalytic Therapy [See Psychoanalysis]
 Psychodiagnosis [See Also Psychodiagnostic Interview] 5910, 5922, 5935, 6974, 7267, 7292, 7294, 7302, 7317, 7318, 7321, 7327, 7331, 7332, 7351, 7354, 7357, 7380, 7389, 7409, 7444, 7455, 7658, 7753, 7796, 7855, 8302, 8399
 Psychodiagnostic Classificat (Proc) [See Psychodiagnosis]
 Psychodiagnostic Classificat (Taxon) [See Psychodiagnostic Typologies]
 Psychodiagnostic Interview 7505, 7543
 Psychodiagnostic Typologies 7251, 7313, 7411, 7818
 Psychodynamics 7252, 7270
 Psychogenesis [See Childhood Play Development, Cognitive Development, Emotional Development, Intellectual Development, Language Development, Moral Development, Perceptual Development, Personality Development, Psychosocial Development, Speech Development]
 Psycholinguistics 6663, 6667, 6672, 6753, 7271
 Psychological Correlates [See Psychodynamics]
 Psychological Endurance 7698
 Psychological Stress 6427, 6438, 7242, 7337, 7730, 7752, 8143
 Psychological Terminology 7306, 7411, 7522
 Psychologists [See Also Clinical Psychologists, School Psychologists] 7768, 7813, 7818
 Psychology [See Also Applied Psychology, Clinical Psychology, Comparative Psychology, Developmental Psychology, Educational Psychology, Gerontology, Mathematical Psychology, Medical Psychology, Neuropsychology, School Psychology, Social Psychology] 8000
 Psychometrics 5905, 5906, 6003, 6366, 6478, 7836, 8340, 8343, 8377
 Psychomotor Development [See Speech Development]
 Psychomotor Processes [See Perceptual Motor Processes]
 Psychoneurosis [See Neurosis]
 Psychopath [See Antisocial Personality]
 Psychopathology 5869, 7311, 7323
 Psychopharmacology 6567, 7481
 Psychophysical Measurement 5913, 5927, 5971, 6025, 6054, 7424
 Psychophysiologic Disorders [See Psychosomatic Disorders]
 Psychophysiology 6429, 6438
 Psychosexual Behavior [See Also Erection (Penis), Eroticism, Exhibition-

ism, Heterosexuality, Homosexuality, Impotence, Incest, Male Homosexuality, Male Orgasm, Masturbation, Orgasm, Pedophilia, Premarital Intercourse, Promiscuity, Prostitution, Sex Roles, Sexual Abstinence, Sexual Deviations, Sexual Function Disturbances, Sexual Intercourse (Human), Transsexualism, Voyeurism] 6681, 6896, 6938, 6996, 7001, 7002, 7007, 7009, 7134, 7227, 7243, 7351, 7479, 7504
 Psychosis [See Also Acute Psychotic Episode, Acute Schizophrenia, Childhood Psychosis, Childhood Schizophrenia, Chronic Schizophrenia, Delirium Tremens, Early Infantile Autism, Manic Depressive Psychosis, Paranoid Schizophrenia, Schizophrenia] 7261, 7270, 7310, 7327, 7363
 Psychosocial Development [See Also Childhood Play Development, Personality Development] 5947, 6821, 6825, 6826, 6830, 6853, 7003, 7459, 8017, 8046, 8306
 Psychosocial Mental Retardation 7384
 Psychosocial Readjustment 6948, 7401, 8053, 8200
 Psychosocial Rehabilitation [See Also Vocational Rehabilitation] 7766, 7767, 7768, 7772
 Psychosocial Resocialization 7759, 7775
 Psychosomatic Disorders [See Also Anorexia Nervosa] 7492
 Psychotherapeutic Counseling [See Also Conjoint Therapy, Family Therapy] 5949, 7245, 7510, 7517, 7529, 7532, 7539, 7552, 7606, 7727
 Psychotherapeutic Intervention Tech [See Crisis Intervention]
 Psychotherapeutic Methods [See Psychotherapeutic Techniques]
 Psychotherapeutic Outcomes 7502, 7509, 7515, 7530, 7531, 7533, 7534, 7547, 7579, 7605
 Psychotherapeutic Processes [See Also Countertransference, Psychotherapeutic Resistance, Psychotherapeutic Transference] 7485, 7489, 7491, 7496, 7500, 7502, 7504, 7506, 7509, 7511, 7513, 7514, 7515, 7516, 7521, 7527, 7528, 7529, 7532, 7533, 7543, 7546, 7557, 7569, 7578, 7596, 7602, 7698, 7709, 7725, 7784, 7787, 7805, 7811, 7825, 7840, 7841, 7843, 7844, 7847, 7859, 8338, 8391, 8393
 Psychotherapeutic Resistance 7553
 Psychotherapeutic Techniques [See Also Autogenic Training] 7276, 7485, 7495, 7498, 7518, 7520, 7534, 7535, 7536, 7538, 7540, 7542, 7548, 7550, 7552, 7553, 7554, 7691, 7772
 Psychotherapeutic Transference 7843
 Psychotherapist Attitudes 7514
 Psychotherapist Trainees [See Therapist Trainees]
 Psychotherapists 7513, 7514, 7546, 7824
 Psychotherapy [See Also Brief Psychotherapy, Child Psychotherapy, Client Centered Therapy, Conjoint Therapy, Encounter Group Therapy, Family Therapy, Geriatric Psychotherapy, Gestalt Therapy, Group Psychotherapy, Hypnotherapy, Individual Psychotherapy, Marathon Group Therapy, Play Therapy, Psychoanalysis, Psychotherapeutic Counseling, Therapeutic Community, Transactional Analysis] 7489, 7494, 7521, 7527, 7540, 7545, 7781

BRIEF SUBJECT INDEX

Psychotherapy Training 7517, 7825
 Psychotic Episode (Acute) [See Acute Psychotic Episode]
 Psychotomimetic Drugs [See Lysergic Acid Diethylamide, Mescaline]
 Puberty 6424, 7003, 7469
 Pubescence [See Sexual Development]
 Public Attitudes [See Public Opinion]
 Public Opinion 6901, 6987, 7142, 7175

 Puerto Rico 7521, 8432
 Pulmonary Emphysema 7426
 Pulse (Arterial) [See Arterial Pulse]
 Punishment 6134, 6188, 6189, 6196, 6203, 6208, 6246, 6285, 6297, 6889, 7111, 7134, 7138, 7768, 7872
 Pupil Dilation 6384, 7048, 7141, 7889
 Pursuit (Rotary) [See Rotary Pursuit]

Quails 6254
 Questionnaires 5939, 5961, 7035
 Questionnaires (Attitude) [See Attitude Measures]
 Questionnaires (Opinion) [See Attitude Measures]
 Questionnaires (Personality) [See Personality Measures]

Rabbits 6299, 6302, 6315, 6456, 6462, 6522, 6590, 6611
 Race (Anthropological) [See Also Caucasians, Negroes] 8154, 8229
 Race Attitudes [See Also Antisemitism, Ethnocentrism, Racism] 5909, 6834, 6869, 6879, 6881, 6900, 6905, 6913, 6914, 6924, 6943, 7060, 7102, 7125, 7140, 7604, 7777, 7988, 7999, 8055, 8059
 Racial Differences 5909, 6101, 6751, 6824, 6832, 6835, 6857, 6920, 7040, 7091, 7133, 7176, 7196, 7223, 7740, 8038, 8059, 8187, 8207, 8220, 8229, 8233, 8235, 8335, 8359, 8469, 8493
 Racial Discrimination 7777
 Racial Integration [See Also School Integration (Racial)] 6905
 Racial Segregation (Schools) [See School Integration (Racial)]
 Racism 7994
 Radiation 6054, 6449
 Radical Movements 6859, 6876
 Radicalism (Political) [See Political Radicalism]
 Rage [See Anger]
 Rapid Eye Movement Sleep [See REM Sleep]
 Rapport [See Interpersonal Attraction]
 Rat Learning 5893, 6246, 6282, 6284, 6423, 6516, 6533, 6536, 6554, 6599, 6625
 Rating 8285
 Rating Scales 5912, 5918, 5971, 7090, 7331, 7938, 8485, 8498
 Ratio Reinforcement [See Fixed Ratio Reinforcement]
 Ratiocination [See Logical Thinking]
 Rats 5862, 5881, 5883, 5893, 6229, 6231, 6232, 6236, 6240, 6242, 6243, 6244, 6245, 6246, 6247, 6248, 6249, 6250, 6256, 6258, 6262, 6264, 6265, 6268, 6269, 6270, 6273, 6274, 6277, 6280, 6282, 6283, 6284, 6285, 6286, 6287, 6288, 6289, 6290, 6292, 6295, 6297, 6300, 6303, 6304, 6305, 6308, 6309,

6310, 6311, 6314, 6317, 6318, 6321, 6324, 6327, 6330, 6336, 6340, 6343, 6344, 6345, 6346, 6352, 6354, 6371, 6373, 6377, 6382, 6391, 6398, 6399, 6402, 6408, 6415, 6417, 6424, 6440, 6442, 6444, 6445, 6447, 6448, 6450, 6458, 6459, 6460, 6461, 6463, 6465, 6466, 6469, 6471, 6476, 6477, 6478, 6483, 6485, 6489, 6491, 6492, 6493, 6494, 6495, 6496, 6498, 6499, 6501, 6502, 6503, 6504, 6506, 6507, 6508, 6509, 6510, 6511, 6515, 6516, 6517, 6518, 6519, 6521, 6523, 6524, 6525, 6531, 6533, 6536, 6537, 6538, 6540, 6541, 6543, 6546, 6547, 6552, 6554, 6555, 6557, 6560, 6561, 6562, 6564, 6565, 6568, 6569, 6571, 6572, 6573, 6575, 6577, 6579, 6580, 6582, 6584, 6585, 6590, 6593, 6596, 6598, 6599, 6600, 6602, 6603, 6607, 6610, 6611, 6614, 6615, 6616, 6618, 6619, 6621, 6623, 6625, 6628, 6629, 6630, 6632, 6634, 6635, 6638, 6642, 6645, 6646
 Reaction (Drugs) [See Drug Adverse Reactions]
 Reaction (Fugue) [See Fugue Reaction]
 Reaction Time 5895, 5978, 5979, 5982, 5991, 5993, 5994, 6012, 6025, 6055, 6091, 6095, 6190, 6269, 6376, 6383, 6514, 6544, 6741, 6773, 7393, 7645
 Reactions To Crisis [See Stress Reactions]
 Reactive Schizophrenia [See Schizophrenia]
 Readiness (Reading) [See Reading Readiness]
 Readiness (School) [See School Readiness]
 Reading [See Also Oral Reading, Remedial Reading, Silent Reading] 7450, 8147, 8209, 8235, 8308
 Reading Ability 6094, 7338, 7378, 7385, 7398, 7455, 8015, 8134, 8136, 8137, 8155, 8181, 8194, 8294
 Reading Achievement 8031, 8037, 8043, 8056, 8062, 8073, 8094, 8099, 8127, 8135, 8137, 8141, 8151, 8156, 8159, 8164, 8170, 8184, 8185, 8188, 8189, 8282, 8284, 8292, 8293, 8295, 8319, 8330, 8342, 8356, 8381, 8415, 8422, 8436
 Reading Comprehension 6106, 6219, 6666, 6731, 7986, 8043, 8096, 8112, 8137, 8147, 8150, 8167, 8170, 8175, 8327, 8384, 8476
 Reading Disabilities [See Also Dyslexia] 7378, 7385, 7388, 7392, 7407, 8127, 8304, 8311, 8333
 Reading Education 7984, 8011, 8022, 8043, 8096, 8099, 8112, 8117, 8118, 8127, 8128, 8135, 8141, 8181, 8185, 8282, 8293, 8295, 8311, 8342
 Reading Materials 6219, 7338, 7981, 7986, 7994, 8031, 8065, 8096, 8117, 8147, 8167, 8180, 8304, 8318, 8320
 Reading Measures 8342, 8384, 8436
 Reading Readiness 8011, 8075, 8129, 8288
 Reading Skills 6123, 7984, 8011, 8127, 8181, 8188, 8292, 8294, 8313
 Reading Speed 6106, 8090, 8096, 8167, 8294, 8327
 Readjustment (Psychosocial) [See Psychosocial Readjustment]
 Readmission (Hospital) [See Hospital Admission]
 Readmission (Psychiatric Hospital) [See Psychiatric Hospital Readmission]
 Reality 6928, 8264, 8274

Reasoning [See Also Inductive Deductive Reasoning, Inference] 6127, 6699, 6717, 6975, 8100
 Rebuttal [See Professional Criticism Reply]
 Recall (Learning) [See Also Free Recall] 6007, 6080, 6137, 6141, 6159, 6167, 6180, 6196, 6219, 6759, 6797, 6810, 7199, 7400, 8028, 8091, 8139
 Recency Effect 6133, 6151
 Receptors (Neural) [See Neural Receptors]
 Recidivism 7762, 7772, 7774
 Reciprocal Inhibition Therapy 7618
 Reciprocity 6718, 7097, 7102, 7113, 7118, 7125, 7156, 7174
 Recognition (Learning) 6103, 6137, 6144, 6146, 6154, 6162, 6163, 6165, 6182, 6191, 7381, 7398, 8139, 8185, 8190
 Reconstruction (Learning) 6066, 6722, 8128
 Reconstructive Psychotherapy [See Psychotherapy]
 Recorders (Tape) [See Tape Recorders]
 Recovery (Disorders) 7306, 7416, 7545
 Recreation [See Also Athletic Participation, Camping, Gambling, Judo, Sports, Summer Camps (Recreation), Television Viewing] 6838, 6959, 6965, 6966, 7404, 8377, 8517
 Recreation Therapy [See Art Therapy, Music Therapy]
 Recreational Day Camps [See Summer Camps (Recreation)]
 Red Nucleus [See Mesencephalon]
 Reductionism 6657
 Reenlistment (Military) [See Military Enlistment]
 Referral (Professional) [See Professional Referral]
 Reflex (Conditioned) [See Conditioned Responses]
 Reflex (Unconditioned) [See Unconditioned Responses]
 Reflexes [See Also Acoustic Reflex, Eyeblink Reflex, Flexion Reflex, Startle Reflex] 6480, 6508
 Refraction Errors [See Myopia]
 Regression (Defense Mechanism) 6674
 Regression Analysis [See Analysis of Variance]
 Rehabilitation [See Also Drug Rehabilitation, Psychosocial Rehabilitation, Vocational Rehabilitation] 7480, 7707, 7755, 7759, 7771, 7834
 Rehabilitation (Drug) [See Drug Rehabilitation]
 Rehabilitation (Psychosocial) [See Psychosocial Rehabilitation]
 Rehabilitation (Vocational) [See Vocational Rehabilitation]
 Rehabilitation Centers [See Also Sheltered Workshops] 7826
 Reinforcement [See Also Differential Reinforcement, Fixed Interval Reinforcement, Fixed Ratio Reinforcement, Negative Reinforcement, Positive Reinforcement, Praise, Preferred Rewards, Punishment, Reinforcement Amounts, Reinforcement Schedules, Rewards, Secondary Reinforcement, Self Reinforcement, Social Reinforcement, Variable Interval Reinforcement, Verbal Reinforcement] 6134, 6166, 6175, 6216, 6274, 6288, 6302, 6472, 6615, 6772, 7052, 7636, 8033, 8064, 8158, 8232

BRIEF SUBJECT INDEX

Reinforcement (Vicarious) [See Vicarious Experiences]
Reinforcement Amounts 6189, 6214, 6269, 6271, 6272, 6273, 6283, 6287, 6290, 6295, 6492, 6498, 6615, 7168, 8506
Reinforcement Schedules [See Also Fixed Interval Reinforcement, Fixed Ratio Reinforcement, Variable Interval Reinforcement] 6169, 6174, 6199, 6214, 6216, 6231, 6245, 6255, 6260, 6263, 6264, 6268, 6269, 6270, 6282, 6284, 6285, 6286, 6290, 6291, 6294, 6298, 6300, 6303, 6304, 6307, 6309, 6310, 6312, 6313, 6317, 6364, 6496, 6582, 6599, 6640, 7043, 7393, 7608, 8012, 8030, 8049, 8090, 8102, 8132, 8414
Relations (Peer) [See Peer Relations]
Relaxation 6007, 7623, 7808
Relaxation Therapy [See Systematic Desensitization Therapy]
Reliability (Statistical) [See Statistical Reliability]
Reliability (Test) [See Test Reliability]
Religion [See Also Related Terms] 6922
Religious Affiliation [See Also Judaism, Protestantism, Roman Catholicism] 6892, 6909, 6923
Religious Beliefs [See Also God Concepts, Judaism, Protestantism, Religious Affiliation, Roman Catholicism] 6688, 6865, 6867, 6909, 6924, 6927, 6938, 7030, 7032, 7166, 7167, 7247, 7360, 7426, 7726
Religious Education 5872, 6865, 6929
Religious Personnel [See Also Ministers (Religion), Nuns, Priests] 6865, 8517
Religious Practices [See Also Meditation, Prayer] 6923, 6927, 6938
Religious Prejudices 6924
REM Sleep 6221, 6393, 6398, 6425, 6427, 6483, 6539, 6605, 6636, 7651
Remedial Reading 8292, 8294, 8308, 8320, 8333
Remembering [See Retention]
Remission (Disorders) [See Symptom Remission]
Repairmen [See Technical Service Personnel]
Repetition (Compulsive) [See Compulsive Repetition]
Reply (To Professional Criticism) [See Professional Criticism Reply]
Repression Sensitization 6147, 7185
Reptiles [See Lizards, Snakes, Turtles]
Research [See Experimentation]
Research Design [See Experimental Design]
Research Methods [See Methodology]
Resentment [See Hostility]
Reserpine 6546
Residence Halls [See Dormitories]
Residential Care Attendants [See Attendants (Institutions)]
Residential Care Institutions [See Also Halfway Houses, Hospitals, Nursing Homes, Psychiatric Hospitals] 7736, 7738, 7745, 7748, 7987, 8095
Resistance (Psychotherapeutic) [See Psychotherapeutic Resistance]
Resistance (Skin) [See Skin Resistance]
Resocialization (Psychosocial) [See Psychosocial Resocialization]
Resonance [See Vibration]
Respiration 6415, 6428, 6439, 6468, 6561, 6576, 7666
Respiration Stimulating Drugs [See Caffeine]

Respiratory Tract Disorders [See Asthma, Pneumonia, Emphysema]
Respondent Conditioning [See Classical Conditioning]
Response Amplitude 6300, 6397
Response Bias 5880, 6271, 6436
Response Duration 6713
Response Frequency 6138, 6268
Response Lag [See Reaction Time]
Response Latency 6397, 6606, 6774
Response Parameters [See Also Interresponse Time, Reaction Time, Response Amplitude, Response Duration, Response Frequency, Response Latency, Response Set, Response Variability] 6068, 6138, 6788
Response Set 6433, 7220, 8024
Response Speed [See Reaction Time]
Response Time [See Reaction Time]
Response Variability 5953, 5994, 7046
Responses [See Also Conditioned Emotional Responses, Conditioned Responses, Conditioned Suppression, Emotional Responses, Orienting Responses, Unconditioned Responses] 5962
Responsibility 7107, 7115, 7143, 7154, 7510, 7526, 7888
Retaliation [See Reciprocity]
Retarded (Mentally) [See Mentally Retarded]
Retention [See Also Recall (Learning), Recognition (Learning), Reconstruction (Learning)] 5981, 6139, 6142, 6176, 6183, 6194, 6243, 6259, 6524, 6563, 6641, 6740, 6759, 7179, 7441, 8061, 8086, 8087, 8149, 8155, 8181, 8307
Retention Measures [See Also Free Recall, Recall (Learning), Recognition (Learning), Reconstruction (Learning)] 6151
Reticular Formation 6471, 6632
Retina 6064, 6358, 6363, 6387, 6402
Retinal Image 6034, 6056, 6403, 7186
Retirement 7735, 8053
Retroactive Inhibition 6569
Reversal Shift Learning 6292, 6296, 6316, 6492, 6728, 6734, 6809
Review (of Literature) [See Literature Review]
Rewards [See Also Preferred Rewards] 6188, 6196, 6203, 6706, 7246, 8138
Rheumatism [See Arthritis]
Rheumatoid Arthritis 7684
Ribonucleic Acid 6606
Rigidity (Muscles) [See Muscle Contractions]
Rigidity (Personality) 7391, 8410
Risk Taking [See Also Gambling] 5968, 6092, 6105, 6116, 6812, 6855, 6925, 7034, 7095, 7110, 7346, 7762, 7898, 8557
Ritalin [See Methylphenidate]
Rites (Nonreligious) 7003
Rites (Religion) [See Religious Practices]
Rites of Passage [See Birth Rites, Marriage Rites]
Rituals (Nonreligious) [See Rites (Nonreligious)]
Rituals (Religion) [See Religious Practices]
RNA (Ribonucleic Acid) [See Ribonucleic Acid]
Robbery [See Theft]
Rodents [See Gerbils, Guinea Pigs, Hamsters, Mice, Rats, Squirrels]
Rokeach Dogmatism Scale 7810
Role (Counselor) [See Counselor Role]

Role Conflicts 7287, 7946, 8517, 8521
Role Expectations 7902, 8221, 8223, 8274, 8521

BRIEF SUBJECT INDEX

School Administration [See Educational Administration]
School Administrators [See Also School Principals, School Superintendents] 7886, 7888, 7890, 7899, 7902, 7909, 7925, 7926, 7934, 7939, 7954, 7960, 7963, 7966, 7968, 7972, 7976, 8217, 8339, 8347
School Age Children 5924, 5942, 5998, 5999, 6003, 6019, 6027, 6100, 6101, 6110, 6111, 6123, 6124, 6129, 6132, 6134, 6141, 6158, 6174, 6183, 6188, 6191, 6196, 6203, 6206, 6208, 6215, 6392, 6665, 6666, 6669, 6690, 6692, 6696, 6697, 6698, 6699, 6703, 6705, 6706, 6708, 6709, 6713, 6714, 6715, 6716, 6717, 6718, 6720, 6721, 6724, 6725, 6726, 6727, 6729, 6730, 6731, 6735, 6736, 6740, 6743, 6745, 6746, 6747, 6749, 6750, 6751, 6753, 6757, 6759, 6761, 6762, 6763, 6764, 6765, 6769, 6773, 6774, 6775, 6776, 6777, 6781, 6782, 6783, 6785, 6787, 6791, 6793, 6794, 6795, 6797, 6801, 6804, 6806, 6807, 6808, 6810, 6811, 6812, 6814, 6815, 6816, 6817, 6818, 6819, 6820, 6822, 6827, 6832, 6833, 6834, 6837, 6842, 6843, 6844, 6846, 6848, 6851, 6852, 6854, 6855, 6856, 6857, 6858, 6880, 6888, 6904, 6925, 6951, 6955, 7036, 7040, 7060, 7077, 7092, 7101, 7111, 7157, 7181, 7198, 7233, 7237, 7246, 7256, 7274, 7283, 7293, 7312, 7318, 7319, 7381, 7385, 7386, 7387, 7392, 7394, 7395, 7397, 7398, 7400, 7404, 7406, 7408, 7414, 7421, 7425, 7436, 7438, 7444, 7447, 7448, 7452, 7453, 7549, 7611, 7613, 7614, 7620, 7635, 7637, 7684, 7692, 7700, 7721, 7733, 8276, 8292, 8301, 8303, 8304, 8316, 8324, 8349, 8439, 8453, 8552
School Attendance 8005, 8187, 8207, 8224, 8283, 8401
School Counselors 7517, 7523, 7803, 7804, 7821, 7884, 7925, 7929, 7941, 7954, 7956, 8338, 8344, 8347, 8374, 8376, 8402, 8421
School Dropouts 8069, 8088, 8171, 8207, 8359
School Enrollment [See Also School Attendance, School Truancy] 8186, 8218
School Environment 7867, 7873, 7885, 7892, 7913, 8082, 8084, 8094, 8117, 8168, 8221, 8310
School Facilities [See Dormitories, Educational Laboratories, Learning Centers (Educational)]
School Federal Aid [See Educational Financial Assistance]
School Financial Assistance [See Educational Financial Assistance]
School Integration (Racial) 6943, 7897, 7912, 7942, 7950, 8220
School Learning 8060, 8061, 8063, 8077, 8146, 8157, 8163, 8242, 8372
School Organization [See Educational Administration]
School Phobia 7571
School Principals 7885, 7894, 7917, 7930, 7932, 7933, 7935, 7950, 7966, 8005
School Psychologists 7809, 7835, 7932, 7947, 7970, 8382, 8421, 8422
School Psychology 7966
School Readiness 5944, 8047
School Superintendents 7905
School Truancy 8350
Schools [See Also Colleges, High Schools, Junior High Schools, Kindergartens, Nongraded Schools, Technical Schools] 7936, 7997
Science (Social) [See Social Sciences]

Science Education 6748, 7986, 7991, 8068, 8115, 8174, 8239
Sciences [See Also Anthropology, Applied Psychology, Biochemistry, Clinical Psychology, Community Psychiatry, Comparative Psychology, Developmental Psychology, Educational Psychology, Endocrinology, Epidemiology, Forensic Psychiatry, Geography, Gerontology, Mathematical Psychology, Medical Psychology, Neuroanatomy, Neurochemistry, Neurology, Neuropathology, Neuropsychology, Neuropsychology, Psychiatry, Psychology, Psychopathology, School Psychology, Social Psychiatry, Social Psychology, Social Sciences, Sociology, Surgery] 6657, 7848
Scientific Communication [See Also Professional Meetings And Symposia, Psychological Terminology] 6648, 6654, 6657, 6873, 7857
Scientific Methods [See Experimental Methods]
Scientists [See Also Related Terms] 7566, 8511
Sclera [See Eye (Anatomy)]
Sclerosis (Nervous System) 7653
Scopolamine 6530, 6540, 6599, 6612
Scopolamine Hydrobromide [See Scopolamine]
Scores (Test) [See Test Scores]
Scoring (Testing) 5910, 5917, 5920, 5929, 5934, 5937, 7208, 8348, 8427
Scotland 6043
Screening (Job Applicants) [See Job Applicant Screening]
Screening Tests [See Selection Tests]
Sea Gulls 6235
Seasonal Variations 6864
Secobarbital 6578, 6633
Seconal [See Secobarbital]
Secondary Education 7980, 7994, 8408
Secondary Reinforcement 6215, 6309, 8098, 8308
Secretarial Skills [See Clerical Secretarial Skills]
Sectioning (Lesion) [See Lesions]
Security (Emotional) [See Emotional Security]
Sedatives [See Also Amobarbital, Atropine, Chlorpromazine, Haloperidol, Heroin, Pentobarbital, Reserpine, Scopolamine, Secobarbital] 6553
Segregation (Racial) [See Racial Integration]
Seizures [See Convulsions]
Selection (Personnel) [See Personnel Selection]
Selection Tests 8335
Selective Attention 6058, 6403, 6804, 7179
Selective Breeding 6357, 6592
Self Actualization 5921, 6862, 6928, 7064, 7190, 7193, 7200, 7207, 7248, 7524, 7586, 7590, 7758, 7847, 7866, 7901, 7922, 7928, 8053, 8158, 8178, 8191, 8380, 8538
Self Assessment [See Self Evaluation]
Self Concept [See Also Self Esteem] 5945, 6129, 6220, 6696, 6752, 6856, 6858, 6863, 6888, 6920, 6936, 6947, 6990, 6999, 7026, 7187, 7191, 7227, 7229, 7232, 7233, 7245, 7249, 7282, 7329, 7408, 7449, 7468, 7472, 7475, 7496, 7497, 7524, 7525, 7582, 7590, 7775, 7801, 7802, 7829, 7863, 7953, 7957, 7977, 8013, 8032, 8044, 8051, 8059, 8062, 8068, 8069, 8078, 8093, 8095, 8098,

8103, 8120, 8123, 8144, 8145, 8164, 8178, 8188, 8198, 8210, 8218, 8231, 8240, 8277, 8287, 8289, 8292, 8310, 8311, 8323, 8324, 8332, 8338, 8345, 8350, 8364, 8387, 8425, 8428, 8431, 8459, 8469, 8536
Self Confidence [See Self Esteem]
Self Control 5948, 6412, 6840, 7212, 7624, 7627, 7629
Self Disclosure 6950, 7045, 7051, 7059, 7090, 7105, 7131, 7194, 7242, 7247, 7491, 7500, 7543, 7579, 7583, 8202, 8399
Self Esteem 5926, 5932, 5947, 6835, 6888, 6905, 6928, 7081, 7110, 7120, 7185, 7187, 7226, 7239, 7280, 7498, 7600, 7606, 7785, 7995, 8052, 8101, 8221, 8234, 8289, 8403, 8531
Self Evaluation 5938, 6198, 6203, 6223, 7041, 7249, 7280, 7866, 7897, 7957, 7962, 8161, 8345
Self Image [See Self Concept]
Self Perception 5949, 6840, 6856, 6948, 6960, 7026, 7038, 7116, 7136, 7147, 7163, 7167, 7176, 7177, 7190, 7224, 7227, 7246, 7340, 7514, 7524, 7526, 7554, 7582, 7587, 7593, 7599, 7850, 7888, 7890, 7946, 7962, 8073, 8232, 8355, 8467, 8486
Self Realization [See Self Actualization]
Self Reinforcement 6209, 6215, 7498, 8198
Self Respect [See Self Esteem]
Self Stimulation 5893, 6468, 6478, 6485, 6557, 6600
Selfishness 6848
Semantic Differential 5902, 7137, 7965
Semantics 6107, 6141, 6665, 6670, 6673, 6785
Senescence [See Aged]
Senile Dementia 7297
Senior Citizens [See Aged]
Sensation [See Perception]
Sense Organ Disorders [See Amblyopia, Anosmia, Eye Disorders, Myopia, Nystagmus]
Sense Organs [See Cornea, Ear (Anatomy), Eye (Anatomy), Retina, Taste Buds]
Sensitivity (Drugs) [See Drug Sensitivity]
Sensitivity (Personality) 6833, 7600
Sensitivity Training 7578, 7580, 7581, 7582, 7583, 7585, 7589, 7591, 7595, 7597, 7598, 7599, 7600, 7603, 7604, 7605, 7606, 7814, 7847, 7973, 8345, 8503
Sensitization Repression [See Repression Sensitization]
Sensory Adaptation [See Also Dark Adaptation, Orienting Responses] 6009, 6072, 6075
Sensory Deprivation 6017, 6059, 6378, 6508, 7453
Sensory Feedback [See Also Auditory Feedback, Delayed Auditory Feedback, Visual Feedback] 6437, 7700
Sensory Handicaps (Attit Toward) 7468, 7616
Sensory Motor Processes [See Perceptual Motor Processes]
Sensory Neurons [See Also Auditory Neurons] 6384, 6387, 6395, 6454
Sentence Comprehension 6080, 6114, 6759, 6801, 8349
Sentence Structure 6094, 6114, 6784, 6795, 6801, 6802, 6808, 8106, 8476
Sentences 6785, 7447
Sephardim [See Judaism]
Septum (Brain) Lesions [See Brain Lesions]

BRIEF SUBJECT INDEX

Sequential Learning 6800, 8012
Serial Learning 6128, 6184
Serotonin 6391, 6421, 6450, 6466, 6537, 6547, 6562, 6568, 6621, 6624, 7484, 7654
Serotonin Antagonists [See Also Lysergic Acid Diethylamide] 6450
Serpasil [See Reserpine]
Serum (Blood) [See Blood Serum]
Servicemen [See Military Personnel]
Set (Response) [See Response Set]
Severely Mentally Retarded 7383, 7399, 7403, 8306
Sex Differences (Animal) [See Animal Sex Differences]
Sex Differences (Human) [See Human Sex Differences]
Sex Drive 6677, 7004, 7009, 7654
Sex Hormones [See Also Androgens, Estradiol, Estrogens, Progesterone, Testosterone] 6453
Sex Identity [See Sex Roles]
Sex Linked Developmental Differences 6746
Sex Roles 5922, 5937, 6830, 6836, 6842, 6846, 6853, 6856, 6858, 6881, 6883, 6888, 6910, 6933, 6940, 6953, 6961, 6964, 6969, 6990, 6992, 6997, 6998, 6999, 7003, 7005, 7006, 7008, 7087, 7121, 7123, 7145, 7182, 7227, 7234, 7250, 7342, 7377, 7839, 7994, 8225, 8254, 8392, 8453, 8456
Sexual Abstinence 7009
Sexual Arousal [See Psychosexual Behavior]
Sexual Attitudes 6881, 6896, 6989, 6991, 7007, 7009
Sexual Behavior [See Psychosexual Behavior]
Sexual Delinquency [See Promiscuity]
Sexual Development 6424, 6607, 6635, 6681

Teaching (Programed) [See Programed Instruction]
Teaching Internship [See Student Teaching]
Teaching Machines 7988
Teaching Methods [See Also Audiovisual Instruction, Computer Assisted Instruction, Directed Discussion Method, Discovery Teaching Method, Group Instruction, Individualized Instruction, Lecture Method, Open Classroom Method, Peer Tutoring, Programed Instruction, Team Teaching Method, Tutoring, Videotape Instruction] 6699, 7810, 7811, 7812, 7816, 7821, 7861, 7879, 7914, 7920, 7957, 7964, 7967, 7977, 7979, 7981, 7982, 7983, 7984, 7990, 7991, 7993, 8000, 8007, 8008, 8009, 8011, 8014, 8016, 8019, 8022, 8024, 8028, 8029, 8033, 8040, 8044, 8046, 8050, 8051, 8056, 8060, 8061, 8063, 8066, 8070, 8072, 8076, 8077, 8080, 8081, 8086, 8087, 8089, 8091, 8093, 8098, 8100, 8115, 8126, 8127, 8131, 8183, 8190, 8209, 8239, 8284, 8290, 8291, 8294, 8470
Team Teaching Method 7937, 8060
Technical Schools 7918
Technical Service Personnel 6918, 8490
Technology 8448, 8520
Teenagers [See Adolescents]
Telecommunications Media [See Also Educational Television, Telephone Systems, Television, Television Advertising] 6649
Telencephalon [See Amygdaloid Body, Auditory Cortex, Caudate Nucleus, Cerebral Cortex, Frontal Lobe, Hippocampus, Limbic System, Motor Cortex, Occipital Lobe, Parietal Lobe, Somatosensory Cortex, Temporal Lobe, Visual Cortex]
Telephone Systems 6649, 7727, 7992
Television [See Also Educational Television, Television Advertising] 6649, 8353
Television Advertising 8552
Television Viewing 6658, 6683, 6848, 7036, 8105, 8129
Temperature (Body) [See Body Temperature]
Temperature Effects [See Also Cold Effects, Heat Effects] 6496, 8157
Temperature Perception 6010, 6308, 6359
Temporal Lobe [See Also Auditory Cortex] 7474
Temptation 6843
Tenure (Occupational) [See Occupational Tenure]
Terminally Ill Patients 7438, 7566

Terminology (Psychological) [See Psychological Terminology]
Territoriality 6460, 6968
Test (Achievement) [See Achievement Measures]
Test (Aptitude) [See Aptitude Measures]
Test (Intelligence) [See Intelligence Measures]
Test Administration 5895, 5901, 5909, 5914, 5917, 7208, 7220, 8348, 8353, 8414, 8436
Test Anxiety 6920, 7621, 7629, 8354, 8420, 8436
Test Bias (Cultural) [See Cultural Test Bias]
Test Construction [See Also Content Analysis (Test), Cultural Test Bias, Test Items, Test Reliability, Test Standardization, Test Validity] 5921, 5931, 5934, 5939, 5945, 5949, 5952, 7909, 7912, 7941, 8409
Test Items 5934, 5953, 7278, 8166, 8407, 8418, 8424
Test Normalization [See Test Standardization]
Test Norms 5917, 5937, 8404, 8416
Test Reliability 5899, 5917, 5918, 5922, 5928, 5929, 7601, 7941, 8386, 8395, 8433
Test Scores 5953, 7326, 8407, 8417, 8435, 8436, 8461
Test Standardization 7375
Test Validity 5916, 5917, 5919, 5920, 5922, 5924, 5926, 5929, 5930, 5932, 5934, 5935, 5941, 5942, 5944, 5946, 5948, 5951, 6198, 7205, 7303, 7331, 7443, 7601, 7912, 7938, 7941, 8352, 8375, 8385, 8395, 8406, 8493
Testes 6607
Testimony (Expert) [See Expert Testimony]
Testing [See Also Content Analysis (Test), Cultural Test Bias, Rating, Scaling (Testing), Scoring (Testing), Test Administration, Test Items, Test Reliability, Test Standardization, Test Validity] 8314, 8336
Testing (Hypothesis) [See Hypothesis Testing]
Testing (Job Applicant) [See Job Applicant Screening]
Testing Methods [See Also Forced Choice (Testing Method), Multiple Choice (Testing Method)] 5898, 5918, 5929, 8155, 8166, 8353, 8388, 8418, 8427
Testosterone 6413, 6460, 6583, 6592, 7260, 7638
Tests [See Measurement]
Tests (Personality) [See Personality Measures]
Tests (Statistical) [See Statistical Tests]
Tetrahydrocannabinol 6585, 6597
Thailand 7000
Thalamic Nuclei 6632
Thalamus [See Also Geniculate Bodies (Thalamus), Thalamic Nuclei] 6479
Theatre [See Drama]
Theft 6896
Thematic Apperception Test 5914, 7213
Theology [See Religion]
Theophylline 6621
Theories of Education 7878, 7979, 8125
Theories [See Also Related Terms] 5804, 6673, 6823, 7345, 7423
Theory of Evolution 6386
Therapeutic Abortion [See Induced Abortion]

BRIEF SUBJECT INDEX

Therapeutic Community 7697
 Therapeutic Techniques (Psychother)
 [See Psychotherapeutic Techniques]
 Therapist Attitudes [See Therapist Characteristics]
 Therapist Characteristics 7502, 7506, 7513, 7528, 7533, 7543, 7546, 7562, 7574, 7787, 7805
 Therapist Effectiveness [See Therapist Characteristics]
 Therapist Experience [See Therapist Characteristics]
 Therapist Patient Interaction [See Psychotherapeutic Processes]
 Therapist Personality [See Therapist Characteristics]
 Therapist Trainees 7825
 Therapists [See Also Related Terms] 6967, 7504
 Therapy [See Treatment]
 Therapy (Drug) [See Drug Therapy]
 Therapy (Encounter Group) [See Encounter Group Therapy]
 Therapy (Individual) [See Individual Psychotherapy]
 Therapy (Music) [See Music Therapy]
 Thermoregulation (Body) 6504
 Theta Rhythm 5883, 6373, 6590
 Thinking [See Also Abstraction, Divergent Thinking, Inductive Deductive Reasoning, Inference, Logical Thinking, Reasoning] 5988, 6697, 6746, 6796, 6816, 7990, 8049
 Thioridazine 6594, 7662
 Thiothixene 7640
 Thorazine [See Chlorpromazine]
 Thought Disturbances [See Also Amnesia, Fugue Reaction, Memory Disorders, Obsessions] 7328
 Threat 6203, 6207, 6213, 7118, 7202, 7220
 Threat Postures 6327
 Threshold Determination 5888, 5997, 6370
 Thresholds [See Also Auditory Thresholds, Critical Flicker Fusion Threshold, Dark Adaptation, Pain Thresholds, Sensory Adaptation, Vibrotactile Thresholds, Visual Thresholds] 6359, 6365
 Thyroid Hormones [See Thyroxine, Triiodothyronine]
 Thyroxine 6308
 Time [See Also Interresponse Time] 6120, 6754, 7232
 Time (Interresponse) [See Interresponse Time]
 Time Estimation 6409, 6723
 Time Perception [See Also Time Estimation] 6723, 7248, 7350, 7729, 8458
 Tiredness [See Fatigue]
 Tissues (Body) [See Also Nictitating Membrane, Skin (Anatomy)] 6466
 Tobacco Smoking 7016, 7034, 7608
 Tofranil [See Imipramine]
 Toilet Training 7607, 7611
 Token Reinforcement [See Secondary Reinforcement]
 Tolerance 6979
 Tolerance (Drug) [See Drug Tolerance]
 Tolerance For Ambiguity 5941
 Tone (Frequency) [See Pitch (Frequency)]
 Tongue [See Also Taste Buds] 5997, 6000
 Top Level Managers 8520
 Tortoises [See Turtles]
 Touch [See Tactual Perception]

Toxic Disorders [See Alcohol Intoxication, Mercury Poisoning]
 Toxic Encephalopathies [See Alcohol Intoxication]
 Toxicity 6275, 6318, 6603
 Trace (Memory) [See Memory Trace]
 Tracking [See Also Rotary Pursuit, Visual Tracking] 6639, 6714
 Traditionalism [See Political Conservatism]
 Traffic Accidents (Motor) [See Motor Traffic Accidents]
 Trainable Mentally Retarded 7379, 7390, 7395, 7769, 8307
 Training [See Education]
 Training (Autogenic) [See Autogenic Training]
 Training (Clinical Methods) [See Clinical Methods Training]
 Training (Clinical Psychology Grad) [See Clinical Psychology Grad Training]
 Training (Community Mental Health) [See Community Mental Health Training]
 Training (Graduate Psychology) [See Graduate Psychology Education]
 Training (Personnel) [See Personnel Training]
 Training (Psychotherapy) [See Psychotherapy Training]
 Tranquilizing Drugs [See Also Amitriptyline, Chlordiazepoxide, Chlorpromazine, Diazepam, Fluphenazine, Haloperidol, Meprobamate, Minor Tranquilizers, Neuroleptic Drugs, Perphenazine, Phenothiazine Derivatives, Reserpine, Thioridazine, Thiothixene, Trifluoperazine] 6570, 6577, 6605, 6623, 7665
 Transactional Analysis 7512, 8479
 Transfer (Learning) [See Also Positive Transfer] 6136, 6186, 6191, 6244, 6251, 6302, 6487, 6527, 6591, 6717, 6740, 7405, 7692, 8149, 8221
 Transfer Students 8275, 8283, 8357, 8412
 Transferences 7277
 Transference (Psychotherapeutic) [See Psychotherapeutic Transference]
 Transportation [See Also Air Transportation, Automobiles, Ground Transportation, Public Transportation] 6959
 Transportation Accidents [See Motor Traffic Accidents]
 Transposition (Cognition) 6774
 Transsexualism 6899, 7333, 7334
 Tranlycypromine 6567
 Trauma (Emotional) [See Emotional Trauma]
 Trauma (Physical) [See Injuries]
 Treatment Effectiveness Evaluation 7486, 7524, 7544, 7574, 7619, 7640, 7643, 7702, 7707, 7741, 7757, 7760, 7764, 7793
 Treatment Facilities [See Clinics, Community Mental Health Centers, Halfway Houses, Hospitals, Nursing Homes, Psychiatric Clinics, Psychiatric Hospitals]
 Treatment Methods (Physical) [See Physical Treatment Methods]
 Treatment [See Also Related Terms] 7253, 7302, 7429, 7694, 7798
 Tribes 6910, 6939, 7030, 7518
 Trifluoperazine 6618
 Triiodothyronine 6554
 Truancy 7343
 Trust (Social Behavior) 5947, 7098, 7201, 8499
 Tryptamine 6537

Tumors [See Neoplasms]
 Turnover [See Employee Turnover]
 Turtles 5888
 Tutoring [See Also Peer Tutoring] 8004, 8052, 8064, 8293
 Tutors [See Teachers]
 Twins [See Also Heterozygotic Twins, Monozygotic Twins] 6839, 6841
 Type I Errors 7263
 Typing [See Clerical Secretarial Skills]
 Typists [See Clerical Personnel]
 Typologies (Psychodiagnostic) [See Psychodiagnostic Typologies]
 Ulcers (Gastrointestinal) [See Gastrointestinal Ulcers]
 Unconditioned Reflex [See Unconditioned Responses]
 Unconditioned Responses 6456, 7270
 Unconditioned Stimulus 6288, 6302, 6315
 Underachievement (Academic) [See Academic Underachievement]
 Undergraduates [See College Students]
 Underprivileged [See Disadvantaged]
 Understanding [See Comprehension]
 Underweight [See Anorexia Nervosa]
 Unemployment 7192, 8445
 Union of Soviet Socialist Republics 7536
 United States 5873, 6831, 6915, 6916, 6919, 6921, 6937, 6985, 7003, 7092, 7134, 7334, 7786, 7792, 8329, 8371, 8457
 Universities [See Colleges]
 Upper Class 6745, 7017, 7547
 Upward Bound 8334
 Urban Environments [See Also Ghettoes] 6132, 6664, 6736, 6884, 6897, 6925, 6985, 7018, 7233, 7357, 7706, 7869, 7881, 7911, 7961, 7972, 7996, 7997, 8060, 8088, 8107, 8151, 8236, 8309
 Urban Ghettoes [See Ghettoes]
 Urbanization 6903, 8276
 Uric Acid 6416
 Urinary Function Disorders [See Urinary Incontinence]
 Urinary Incontinence 7429, 7680
 Urine 6234, 6460, 7277, 7638, 7662
 Urogenital Disorders [See Menstrual Disorders, Urinary Incontinence]
 Urogenital System [See Female Genitalia, Ovaries, Penis, Prostate, Testes]
 Validity (Statistical) [See Statistical Validity]
 Validity (Test) [See Test Validity]
 Valium [See Diazepam]
 Values [See Also Ethnic Values, Personal Values, Social Values] 5907, 6684, 6790, 6872, 6894, 6908, 6942, 7092, 7093, 7233, 7568, 7886, 7977, 8095, 8121, 8279
 Variability (Response) [See Response Variability]
 Variability (Stimulus) [See Stimulus Variability]
 Variability Measurement [See Also Analysis of Variance] 5976
 Variable Interval Reinforcement 6178, 6276, 6291
 Variables (Statistical) [See Statistical Variables]
 Variance [See Variability Measurement]
 Variations (Seasonal) [See Seasonal Variations]

BRIEF SUBJECT INDEX

Vasoconstrictor Drugs [See Amphetamine, Bufotenine, Methamphetamine, Norepinephrine, Serotonin, Tryptamine]
Velocity 6012, 6041, 6049, 6066
Verbal Ability 6094, 6660, 6732, 7708, 8151, 8159, 8322, 8381, 8432
Verbal Communication [See Also Adjectives, Antonyms, Articulation (Speech), Bilingualism, Compressed Speech, Consonants, Conversation, Dialect, Ethnolinguistics, Foreign Languages, Form Classes (Language), Grammar, Handwriting, Handwriting Legibility, Language, Language Development, Letters (Alphabet), Linguistics, Literacy, Monolingualism, Morphology (Language), Nonstandard English, Nouns, Numbers (Numerals), Orthography, Phonemes, Phonetics, Phonology, Phrases, Pronouns, Pronunciation, Psycholinguistics, Public Speaking, Semantics, Sentence Structure, Sentences, Speech Characteristics, Speech Pauses, Speech Pitch, Speech Processing (Mechanical), Speech Rate, Speech Rhythm, Syllables, Syntax, Synthetic Speech, Verbal Fluency, Vocabulary, Words (Phonetic Units), Written Language] 5980, 6017, 6158, 6660, 6670, 6708, 6772, 6784, 6802, 6808, 7048, 7064, 7091, 7109, 7133, 7173, 7516, 7533, 7564, 7570, 7688, 7729, 7787, 7811, 7844, 7914, 7915, 7920, 7935, 7951, 7964, 7992, 8009, 8151, 8259, 8266, 8394
Verbal Conditioning [See Verbal Learning]
Verbal Fluency 6662, 7414, 7419, 7422
Verbal Learning [See Also Paired Associate Learning, Serial Learning] 6159, 6161, 6173, 6194, 6594, 6661, 7040, 7041, 7052, 7168, 7482, 8086, 8106, 8180, 8190
Verbal Reinforcement [See Also Praise] 6140, 6215, 6768, 7105, 8222, 8227, 8367, 8414
Verbalization [See Verbal Communication]
Vertebrates [See Also Baboons, Birds, Cats, Chickens, Chimpanzees, Cichlids, Dogs, Ducks, Fishes, Frogs, Gerbils, Goldfish, Guinea Pigs, Hamsters, Lemurs, Lizards, Mammals, Mice, Monkeys, Pigeons, Pigs, Primates (Nonhuman), Quails, Rabbits, Rats, Sea Gulls, Sheep, Snakes, Squirrels, Turtles] 6225
Vestibular Stimulation [See Somesthetic Stimulation]
Veterans (Military) [See Military Veterans]
Vibration 6352
Vibrotactile Thresholds 7418
Vicarious Experiences 6185, 6827, 7269
Vicarious Reinforcement [See Vicarious Experiences]
Victimization 6890, 6893, 6913, 6982, 7061, 7097, 7377
Videotape Instruction 7906, 7989
Videotape Recorders 8337
Videotapes 6070, 7557, 7564, 7729, 7785, 7863, 8122, 8380
Vigilance 6218, 6366, 7645
Violence 6859, 6890, 6893, 6933, 7151, 7873
Viral Disorders [See Rubella]
Vision [See Also Binocular Vision, Brightness Perception, Color Perception, Critical Flicker Fusion Threshold, Dark Adaptation, Monocular Vision, Stereo-

scopic Vision, Visual Discrimination, Visual Field, Visual Perception, Visual Thresholds] 6331
Visions (Mysticism) [See Mysticism]
Visual Cortex 6025, 6395, 6399, 6486
Visual Discrimination 6028, 6033, 6049, 6058, 6059, 6069, 6070, 6073, 6074, 6124, 6191, 6225, 6251, 6273, 6316, 6481, 6514, 6520, 6727, 6799, 7398, 8185, 8487
Visual Displays 6160, 7838, 8466
Visual Evoked Potentials 6033, 6034, 6054, 6367, 6368, 6376, 6380, 6392, 6394, 6397, 6399, 6402, 6403, 6694, 6703
Visual Feedback 7564
Visual Field 6029, 6048, 6058, 6395, 6451, 6520
Visual Hallucinations 7330
Visual Masking 6023, 6039, 6046, 6051, 6063
Visual Perception [See Also Binocular Vision, Brightness Perception, Color Perception, Critical Flicker Fusion Threshold, Dark Adaptation, Monocular Vision, Stereoscopic Vision, Visual Discrimination, Visual Field, Visual Thresholds] 5981, 5989, 5995, 6003, 6011, 6012, 6022, 6025, 6027, 6029, 6032, 6034, 6039, 6047, 6048, 6050, 6052, 6053, 6056, 6061, 6063, 6064, 6068, 6072, 6074, 6077, 6118, 6170, 6192, 6218, 6435, 6457, 6520, 6526, 6622, 6689, 6714, 6739, 6798, 7101, 7381, 7388, 7414, 7421, 7464, 7880, 8047, 8097, 8121, 8189, 8313
Visual Stimulation [See Also Illumination, Prismatic Stimulation, Stereoscopic Presentation, Tachistoscopic Presentation, Visual Feedback] 5980, 5991, 6012, 6035, 6054, 6164, 6170, 6197, 6230, 6238, 6250, 6301, 6347, 6364, 6376, 6457, 6689, 6693, 6713, 6715, 6750, 6788, 7150, 7460, 8190
Visual Thresholds [See Also Critical Flicker Fusion Threshold, Dark Adaptation] 5888, 5996, 6033, 6069, 6074, 6241, 6363, 6402, 6451
Visual Tracking 6578
Visually Handicapped [See Also Blind, Partially Sighted] 7440, 7449, 8312, 8352
Vitamin C [See Ascorbic Acid]
Vitamins [See Also Ascorbic Acid] 6318
Vocabulary [See Also Antonyms] 6662, 6671, 6725, 8096, 8185, 8320
Vocalization [See Also Animal Distress Calls, Animal Vocalizations, Infant Vocalization, Voice] 6149, 6150
Vocalization (Infant) [See Infant Vocalization]
Vocalizations (Animal) [See Animal Vocalizations]
Vocational Adjustment [See Occupational Adjustment]
Vocational Aspirations [See Occupational Aspirations]
Vocational Choice [See Occupational Choice]
Vocational Counseling [See Occupational Guidance]
Vocational Counselors 7770, 7925
Vocational Education 7965, 8026, 8299, 8317, 8323, 8381, 8425
Vocational Guidance [See Occupational Guidance]
Vocational Interests [See Occupational Interests]
Vocational Mobility [See Occupational Mobility]

Vocational Preference [See Occupational Preference]
Vocational Rehabilitation 7383, 7761, 7764, 7769, 7770, 7826
Vocational Schools [See Technical Schools]
Vocations [See Occupations]
Voice [See Also Infant Vocalization] 6079, 6659
Volunteer Military Personnel [See Also ROTC Students] 8477
Volunteer Personnel [See Also ROTC Students, Volunteer Military Personnel] 7722, 7817, 7864, 8095
Vomit Inducing Drugs [See Emetic Drugs]
Voting Behavior 5950
Voyeurism 7370

Wages [See Salaries]
Walking 8545
Warning Signal [See Signal Detection (Perception)]
Water Intake 6264, 6295, 6303, 6310, 6585
Wechsler Adult Intelligence Scale 5901
Wechsler Intelligence Scale Children 5943, 8352, 8414
Weight (Body) [See Body Weight]
Weight Perception 6204, 7254
Welfare [See Welfare Services (Government)]
Welfare Services (Government) 6955, 7860
Welsh Figure Preference Test 8379
West German Federal Republic 6667
White Collar Workers [See Clerical Personnel, Management Personnel, Middle Level Managers, Sales Personnel, Top Level Managers]
White Noise 6084, 6090, 7385
White Rats [See Rats]
Whites [See Caucasians]
Widowers 7192
Widows 7192, 7245
Withdrawal (Drug) [See Drug Withdrawal]
Withdrawal Effects (Drug) [See Drug Withdrawal Effects]
Wives [See Also Housewives] 6960, 6972
Womens Liberation Movement 6990
Word Associations 6115, 6146, 6154, 6665, 6757, 6761, 7137
Word Blindness (Aphasia) [See Aphasia]
Word Blindness (Dyslexia) [See Dyslexia]
Word Deafness [See Aphasia]
Word Frequency 6157
Word Meaning 6193, 6665, 6731, 6754, 7040, 7296
Words (Form Classes) [See Form Classes (Language)]
Words (Phonetic Units) 5978, 6048, 6053, 6061, 6104, 6176, 6668, 7305, 7451, 8134
Words (Vocabulary) [See Vocabulary]
Work (Attitudes Toward) 6832, 7471, 8430, 8463, 8534
Work Environments [See Working Conditions]
Work Study Programs [See Educational Programs]
Workers (Agricultural Extension) [See Agricultural Extension Workers]

BRIEF SUBJECT INDEX

Working Conditions [See Also Job Enrichment, Noise Levels (Work Areas)]
6998, 8451, 8482, 8518, 8534
Workshops (Sheltered) [See Sheltered Workshops]
Worms [See Planarians]
Worship [See Religious Practices]
Writing (Creative) [See Literature]

Writing (Handwriting) [See Handwriting]
Written Language [See Also Handwriting, Handwriting Legibility, Letters (Alphabet), Literacy, Numbers (Numerals)]
6668, 6897, 7729, 8176

Yoga 8013

Young Adults 6013, 6130, 6179, 6409, 6691, 6703, 6712, 6734, 6741, 6759, 6785, 6787, 6810, 6815, 6836, 6845, 6903, 6924, 6932, 6997, 7157, 7191, 7206, 7209, 7457, 7556, 8481
Youth (Adolescents) [See Adolescents]
Youth (Adults) [See Young Adults]
Youth (Children) [See Children]

AUTHOR INDEX

The Author Index is intended to be a name index only and not a person index. "Adams, P." will be listed separately from "Adams, Paul" even though the names may refer to the same person; however, two listings for "Adams, P." may refer to two different authors. All authors are listed, not just primary authors.

P P P P PASAR

is an innovative service designed to benefit the individual users of psychology-related information. It provides a comprehensive literature search capability at a level of complexity achievable only through automated retrieval techniques. The intellectual burden for conducting an effective search is shared by the requester and APA information specialists who formulate specific retrieval strategies, augmenting vocabulary and other search parameters supplied by the requester. Experience has provided APA information specialists with the skills to efficiently interact with the automated data base which contains records published in PSYCHOLOGICAL ABSTRACTS from 1967 through the present.

Charges for processing PASAR requests are based on the amount of computer time required to perform a search. Typically these charges range from \$40 to \$60 and will not exceed \$100 unless the requester is contacted first. The total charge for a search is based on its complexity and is in most cases unrelated to the number of references retrieved. For example, a complex search strategy involving many variables or limiting factors may require more computer time and may result in fewer references retrieved than a broad search with few limiting factors.

PASAR Search Request Guidelines

The PASAR Request Form has been designed to assist you in constructing a comprehensive statement of your requirements. However, it should not restrict your input. Provide whatever other information you feel will augment the information specialist's understanding of your requirements. These guidelines should help to clarify items on the Request Form.

ITEM 1. Narrative statement of search topic. Provide a detailed description of the subject matter you wish to be retrieved. Please avoid submitting multiple, discrete requests on a single PASAR Request Form, since such cannot be processed for a single fee. However, multiple aspects of a primary subject may be requested. The distinction is illustrated in the following examples:

Acceptable: "the effects of socioeconomic status, education level, or birth order on career motivation in women."

"Career motivation" is the primary element of this request, while the other elements serve merely to qualify or narrow the scope of this rather broad subject area.

Unacceptable: "the measurement of employee attitudes concerning wages and benefits. Also desire references dealing with the factors that influence management decision-making with respect to personnel policies and procedures."

Although these two topics are closely related to the design and administration of personnel policies and procedures, two separate search strategies would have to be executed to retrieve the specific information requested, and a separate charge for each would have to be made.

ITEM 2. Descriptor(s) relevant to dependent variable(s). Provide a list of words or phrases that indicate the subject matter of prime interest. Descriptors for the "acceptable" example (see Item #1) might include: career motivation, career preference, and career aspirations.

ITEM 3. Descriptor(s) relevant to independent variable(s). Provide a list of words or phrases that will qualify or narrow the scope of the dependent variable. Descriptors for the "acceptable" example (see Item #1) might include: socioeconomic status, social class, educational level, birth order, and women.

ITEM 4. Search qualifications. Once the subject matter of the search has been defined, you may wish to refine it with specific requirements such as population or time frame. These qualifications are often essential to the actual information need; however, they can unnecessarily limit the search, causing retrieval of few of the relevant records. Therefore, consider your requirements carefully.

ITEM 5. Sorting requirements. Please indicate whether you would prefer to have references sorted alphabetically by author or chronologically by year.

ITEM 6. Intended use of search results. Provide a description of how the references resulting from your search will be used (e.g., definition of a research project, preparation of an article, proposal preparation, dissertation, etc.).

Ordering information: When ordering a PASAR search, please read the above guidelines carefully before completing the request form. A purchase order must accompany all institutional requests for a PASAR search. For individuals requesting a PASAR search, the signature of the person responsible for payment must appear on the PASAR request form.

PASAR REQUEST FORM

Psychological Abstracts Information Service

American Psychological Association

Did you know . . .

PsycINFO data base. The PsycINFO data base contains summaries of the world's literature in psychology and related disciplines announced in the *Psychological Abstracts* journal from 1967 to the present. Currently over 200,000 records are contained in the data base which represent original contributions to the field of psychology published in journals, books, technical reports, and monographs.

PATELL (**P**sychological **A**bstracts **T**ape **E**ditions **L**ease or **L**icense). Provides tapes on a lease or license basis to institutions offering search services in the behavioral sciences. Back files to 1967 may be obtained for retrospective searches; the current year is provided monthly and contains all abstracts published in the journal as well as their associated index terms and phrases. PATELL subscriber institutions are located in Europe, South Africa, Canada, and the United States. One of these institutional subscribers is the National Library of Canada.

The National Library of Canada provides a computerized literature search service for sociologists, psychologists, economists, lawyers, educators, historians, linguists, librarians, and others working in the fields of the social and behavioral sciences, and the humanities. **CAN/SDI** (Canadian Selective Dissemination of Information), first developed in 1969 by the National Science Library of Canada to serve scientists, has been highly successful and now produces some 2,000 bibliographies each week for over 4,000 researchers in government, industry, universities, and other institutions.

The **CAN/SDI** system selects current information from journals, books, reports, conferences and proceedings. This is accomplished by a fully-computerized process in which an individual's, or group's, interest profile is matched against the *Psychological Abstracts* data base on magnetic tape. Subscribers receive printouts of citations to publications that are relevant to their own specific interest profile. Trained specialists assist subscribers in the preparation of their interest profiles. At regular intervals, instruction seminars are conducted in Ottawa and elsewhere in Canada, in either English or French.

The National Library's own literature resources support **CAN/SDI** in the Social Sciences. The Library's union catalogues of books and serials service, together with Canada's nationwide inter-library loan network, ensure speedy access anywhere in Canada to material cited in **CAN/SDI** printouts.

Search services available from the National Library:

- ☐ **Current awareness:** Subscribers receive printouts regularly alerting them to new literature in their interest fields.
- ☐ **On-line retrospective searches:** Search specialists assist subscribers to engage in direct dialogue with the computer by means of a CRT

terminal, enabling them to construct and modify search strategy and immediately receive relevant citations on the CRT display screen and, if they wish, in printed form. Searches are run against the PA cumulated backfile, 1967 to current month, and subscribers receive the print-out a few days afterwards.

For more information about the National Library of Canada's computerized Search Services using *PA* and other data bases, contact:
SDI Division

PSYCHOLOGICAL ABSTRACTS 1976 CHANGES

Content Classification. As the result of an extensive study of the psychological literature, a new classification system for 1976 has been developed which groups the literature in a manner more useful to the reader. This classification outline, showing major and minor subject areas, has become the new Table of Contents. The January 1976 issue of *PA* describes these new classifications and their contents in the *Guide to PsycINFO*.

Dissertation Abstracts International. In 1976, *PA* will resume coverage of *Dissertation Abstracts International (DAI)*. Since coverage was suspended in mid 1973, there will be a period of catching up to insure that all material will be included in the 1975-1977 Cumulative Index and that no gaps will appear in the retrospective data base. The relevant dissertations for the last half of 1973, all of 1974 and 75 will be cited in the 1976 issues of *PA*. In 1977, all relevant dissertations from 1976 and 77 will be covered. The 1978 issues will include *DAI* as one of the regularly scanned journals on a current basis.

GUIDE TO PsycINFO

The *Guide* describes innovations in *Psychological Abstracts (PA)* as well as derivative products and services designed to facilitate selective access to the world's scientific literature in psychology and related disciplines. Copies of the *Guide* are available upon request from:

PsycINFO
American Psychological Association
1200 17th Street, N.W.
Washington, D.C. 20036

Psychological Abstracts (PA) provides nonevaluative summaries of the world's literature in psychology and related disciplines. Over 850 journals, technical reports, monographs and other scientific documents provide material for coverage in *PA*. About 20% of the records published in *PA* are bibliographic citations or annotations which are used to cover books, articles peripherally relevant to psychology, or articles that can be represented adequately in approximately 30-50 words.

Issue. The monthly issues contain abstracts listed under 16 major classification categories, with some categories having subsections, as shown in the Table of Contents. Under each classification heading, the abstracts are arranged alphabetically by first author. Abstracts are numbered consecutively in the two volumes produced each year.

Indexes. An author and brief subject index appear in the issues. An expanded and integrated Volume Index is published every six months. Three-year cumulative indexes are also available.

PsycINFO. *PA* records published since 1967 are now on machine readable tapes which provide the basis for automated search and retrieval services known as Psychological Abstracts Information Services (PsycINFO). For more information on these products, uses, and costs write to PsycINFO, American Psychological Association, 1200 Seventeenth St., N.W. Washington, D.C. 20036.

Correspondence on copyright matters should be directed to the permissions office, on back issue sales to the order department, and on subscriptions and address changes to Anne Redman, Subscription Manager. All correspondence should be addressed to the American Psychological Association, 1200 Seventeenth St., N.W., Washington, D.C. 20036.

Address changes must reach the Subscription Office, APA, 30 days prior to the actual change of address. Copies undelivered because of address change will not be replaced; subscribers should notify the post office that they will guarantee second-class forwarding postage. Other claims for undelivered copies must be made within 4 months of publication. Address your claims to Subscription Manager, APA.

Subscriptions are available on a calendar-year basis only (January through December). Published monthly in two volumes (January through June, and July through December), each volume contains approximately 15,000 abstract records. Volume Indexes are published twice a year under separate cover. Subscription price including Indexes per year is \$220 domestic, \$230 foreign. To subscribe, write to Subscription Manager, APA.

KEY TO THE TEXT

The examples of different types of *Psychological Abstracts* records presented here are number coded to provide definition of their elements.

JOURNAL ARTICLE ABSTRACT

¹1271. ²Conger, Anthony L. & Cole, John D. (Duke U) ⁴Who's crazy in Manhattan: A reexamination of "Treatment of psychological disorders among urban children." ³*Journal of Consulting & Clinical Psychology*, 1975(Apr), Vol 43(2), 179-182. — ⁶Reanalyzed data reported by T. S. Langner et al (see PA, Vol. 52:8150) on the prevalence of psychological disturbances in children from welfare and cross-section homes. Results indicate that the data show no meaningful differences in means or skew and a paradoxical greater heterogeneity among welfare children. Some of the difference in variance is clearly attributable to the differential reliability of final scores, and perhaps the remaining difference is due to between-rater differences. Unless other factors were operating, 2 possible conclusions are tenable: Either welfare children manifest both more health and more disturbance than cross-section children or there are no differences in disorder between the populations. A 3rd conclusion is also offered: The populations do actually differ, but the manner in which the disturbance was viewed, rated, and compared necessarily obscured any differences. ⁸ (15 ref.) — ¹⁰*Journal Abstract*.

- 1—Record number.
- 2—Author(s) or editor(s). As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.
- 3—Affiliation of first-named author/editor only.
- 4—Article title, including subtitles: If the original article is in a foreign language, the translated title is given in brackets and the language of the original article is indicated in parentheses.
- 5—Primary publication title and bibliographic data.
- 6—Text of abstract.
- 7—Reference to a previous entry in *Psychological Abstracts*. If an abstract number is unavailable at time of publication, the issue number is given. Consult the Author Index of the PA issue noted in order to determine the record number for the article.
- 8—Summaries included in the primary publication are listed when in language(s) other than that of the article.
- 9—Number of references is included when there are 15 or more listed.
- 10—Abstract source.

BOOK CITATION

¹1703. ²Sugar, Max (Ed). (Louisiana State U, Medical School, New Orleans) ³*The adolescent in group and family therapy*. New York, NY: Brunner/Mazel, 1975. ⁸xvii, ¹⁰286 p. ¹¹\$13.50. ¹²

- 1—Record number.
- 2—Author(s) or editor(s). As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.
- 3—Designation of editor.
- 4—Affiliation of first-named author/editor only.
- 5—Book title. If the book is in a foreign language, the original title is given followed by a translated title and the language of the book is indicated in parentheses.
- 6—Place of publication.
- 7—Publisher.
- 8—Year of publication.
- 9—Prepagination.
- 10—Total pagination.
- 11—Price.
- 12—Annotation occasionally follows.

BOOK CHAPTER CITATION

¹1641. ²Berkovitz, Irving H. & Sugar, Max. (U California, Los Angeles) ³Indications and contraindications for adolescent group psychotherapy. In M. Sugar (Ed), *The adolescent in group and family therapy*. New York, NY: Brunner/Mazel, 1975. ⁸xvii, 286 p. ¹¹\$13.50.

- 1—Record number.
- 2—Author(s) of cited chapter. As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.
- 3—Affiliation of first-named author only.
- 4—Chapter title.
- 5—Referral to the whole book and its bibliographic data.

CONTENT CLASSIFICATION: PA has subsections for some of the 17 major classification categories. These are displayed in the Table of Contents and are designed to group all abstracts relevant to a narrower topic than the major categories under a single heading. Abstracts that are relevant to a major category but not to any of the subsections are listed first and followed by abstracts that are relevant both to a major category and also to the subsections. It is expected that this will help readers locate material related to their interests more quickly.

ABBREVIATIONS: In addition to commonly understood abbreviations* (including all units of measurement, educational degrees, standard statistical abbreviations, and standard Latin and reference terms), standard abbreviations used in *Psychological Abstracts* records are

CA	= chronological age
CNS	= central nervous system
CR	= conditioned response
CS	= conditioned stimulus
DRL	= differential reinforcement of low rates (of responding)
E	= experimenter
ECS	= electroconvulsive shock
EKG	= electrocardiogram (graph)
EMG	= electromyogram (graph)
EPPS	= Edwards Personal Preference Schedule
Exp	= experiment
FI	= fixed interval (reinforcement)
FR	= fixed ratio (reinforcement)
GPA	= grade point average
GSR	= galvanic skin response
ip	= intraperitoneal (ly) (injections)
iv	= intravenous (ly) (injections)
MA	= mental age
MAO	= monoamine oxidase
MMPI	= Minnesota Multiphasic Personality Inventory
NREM	= nonrapid eye movement
REM	= rapid eye movement
ROTC	= Reserve Officer's Training Corps
RT	= reaction time
S	= subject
SVIB	= Strong Vocational Interest Blank
TAT	= Thematic Apperception Test
UCR	= unconditioned response
UCS	= unconditioned stimulus
US	= United States of America
USSR	= Union of Soviet Socialist Republics

PSYCHOLOGICAL ABSTRACTS

Volume 55

May 1976

Number 5

GENERAL PSYCHOLOGY

8560. Coles, Robert. (Harvard U. Health Services) **The mind's fate: Ways of seeing psychiatry and psychoanalysis.** Boston, MA: Little, Brown & Co, 1975. xvi, 282 p. \$10.—Presents a collection of articles by a child psychiatrist-social scientist. The work of Sigmund and Anna Freud and other theorists is discussed; relations between psychiatry and literature are explored; the risks and rewards of psychohistory are examined; and child development is discussed as it is affected by the political, economic, and social activities of various levels of government.

8561. de Mey, Marc. (Rijksuniversiteit Gent, Katholieke Hogeschool Tilburg, Netherlands) **[Unity in the growth of knowledge: Specializations and their development.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Sep), Vol 30(7), 539-571.—Discusses the organization of scientific data. It is asserted that knowledge grows exponentially and depends on the development of novel outstanding specializations. Several stages in the growth and decline of a discipline are suggested: a pioneer phase, the consolidation of previously obtained findings, the development of internal criticism, and senility. An organization dealing with a specific temporary problem goes through the phases of emphasis on content, social relations, institutionalization, literary production, and methodological approaches. (51 ref)—A. J. Ter Keurst.

8562. deMause, Lloyd (Ed). **The new psychohistory.** New York, NY: Psychohistory Press, 1975. 313 p.—Presents a collection of articles which attempt to define psychohistory through illustrative examples. The articles follow 3 main divisions: history of childhood, psychobiography, and group psychohistory.

8563. Lockowandt, Oskar. (Paedagogische Hochschule, Bielefeld, W Germany) **Present status of the investigation of handwriting psychology as a diagnostic method.** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 4-5.

8564. Windes, James D. (Northern Arizona U) **Intentionality, behavior, and identity theory.** *Behaviorism*, 1975(Fal), Vol 3(2), 156-161. Intentionality is regarded as a behavioral attribute and is analyzed in terms of discriminative behavior. It is noted that mental states can be regarded as intentional—as having reference to other things—to the extent that they are likely to result in discriminative behavior appropriate to the presence of other things.—S. M. Levin.

Parapsychology

8565. Nelson, Marie C. **Psi in the family.** *Clinical Social Work Journal*, 1975(Win), Vol 3(4), 279-285.—Case material illustrates the primitive transfer of information, or the occurrence of psi phenomenon, within families. Based on the material presented, an argument is made for treating families as a unit rather than focusing on a symptomatic family member.—S. R. Stein.

History & Philosophies & Theories

8566. Agonito, Rosemary. **Hayek revisited: Mind as the process of classification.** *Behaviorism*, 1975(Fal), Vol 3(2), 162-171.—Describes the theoretical psychology of F. Hayek and discusses its implications. The activity of mind is classification, which is the differentiating activity of the organism whereby experienced events are interrelated. Classification is determined by a functional system of neural connections established on the basis of past experience.—S. M. Levin.

8567. Bancroft, Mary. **Jung and his circle.** *Psychological Perspectives*, 1975(Fal), Vol 6(2), 114-127.—Presents the personal reminiscences of an American woman who met Jung in Zürich in the 1930s, was psychoanalyzed by him, and remained a life-long friend. Jung's comments on other public figures (A. W. Dulles, H. B. Gisevius, Hitler) are included in the anecdotes.

8568. Carlton, Peter L. (Rutgers State U, Medical School, Piscataway) **On neurochemistry and behavior.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1793-1795.—Briefly outlines some of the historical antecedents of biological psychiatry and behavioral pharmacology. The criticism that biological psychiatry is too biological and insufficiently social is refuted, using schizophrenia as an example. Three major outcomes of the discovery of chlorpromazine are identified, and the resultant knowledge of chemical and behavioral processes is examined. The contemporary relevancy of these 2 interrelated disciplines is also emphasized.—L. Gorsey.

8569. Catania, A. Charles. (U Maryland, Baltimore) **The myth of self-reinforcement.** *Behaviorism*, 1975(Fal), Vol 3(2), 192-199.—Analyzes the concept of self-reinforcement and concludes that because of internal logical contradictions, self-awareness is a more accurate term. The essential component of situations typically cited as instances of self-reinforcement is not the involvement of self-administered reinforcement but rather the establishment of self-discrimination or self-awareness; the organism must discriminate some aspect of its own behavior which preceded the reinforcement. Consider the student who supposedly rewards himself for completing an assignment by going to the movies. The essential aspect

of the situation is not that the student is engaging in self-reinforcement. Instead, he must discriminate the adequacy with which the assignment has been completed. (26 ref)—S. M. Levin.

8570. Cox, Alice M. (Indiana State U) **The origins and development of school psychology in the canton of Geneva, Switzerland.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3457-3458.

8571. Douglas, Robert J. & Marcellus, Daniel. (U Washington, Seattle) **The ascent of man: Deductions on a multivariate analysis of the brain.** *Brain, Behavior & Evolution*, 1975, Vol 11(3-4), 179-213.—Investigation of taxonomic and phylogenetic relationships among brain measurements for 63 species produced findings which are in good agreement with traditional ideas, including conclusions that tree shrews were ancestral to prosimians and that simians are derived from a tarsoid ancestor. By present measures the human brain is more like that of an American woolly or spider monkey than like that of either the chimpanzee or gorilla. (16 ref)

8572. Fabre, Nicole. [Marie-Clotilde four years later.] (Fren) *Etudes Psychopathologiques*, 1975(Sep), No 21, 185-189.—Reviews the contribution made by R. Desoille in publishing the famous case of Marie-Clotilde.—F. Auld.

8573. Giorgi, Amedeo. (Duquesne U) **Convergences and divergences between phenomenological psychology and behaviorism: A beginning dialogue.** *Behaviorism*, 1975(Fal), Vol 3(2), 200-212.—Convergences between phenomenological psychology (PP) and behaviorism include opposition to dualism between the physical world and mental representations, and between a real visible man and an "inner" man with conscious states of which he alone is aware. Additionally, both views favor cautious use of theories, especially those which utilize hypothetico-deductive methodology, and a careful, descriptive, rather than inferential approach to behavior. Behaviorism and PP also share opposition to physiological reductionism. The 2 viewpoints diverge regarding their understanding of science. PP is more sensitive to the difference between natural and human phenomena and contends that the latter cannot be adequately dealt with by means of the scientific approach applicable with the former. Rather, a broader and more naively descriptive approach must be adopted. A further difference is that PP accepts intentionality in man's viewpoint of the world while behaviorism accounts for man strictly in terms of external relations. Finally, the phenomenologist is more likely to eschew the language of control in describing man and, instead, emphasize a careful description of the meanings man imposes on his world. —S. M. Levin.

8574. Hannum, Hunter G. **Mann's Joseph novels: A journey toward individuation.** *Psychological Perspectives*, 1975(Fal), Vol 6(2), 163-175.—Examines the similarities between Jung's "path of individuation" and the journey through the stages of separation, initiation, and return followed by the hero of T. Mann's tetralogy. The work is seen as a rich mingling of myth and psychology and as sharing other themes with Jungian thought.

8575. Hinckley, Joyce A. (U Massachusetts) **A theoretical alternative to the present sanity-insanity dichotomy: Supersanity, from a multidisciplinary per-**

spective. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6448.

8576. Holland, John L. & Gottfredson, Gary D. (Johns Hopkins U) **Using a typology of persons and environments to explain careers: Some extensions and clarifications.** *Center for Social Organization of Schools Report, Johns Hopkins U*, 1975(Oct), No 204, 43 p.—Demonstrates how J. L. Holland's theory of careers can be used to explain several vocational questions concerning (a) personal and environmental characteristics which lead to vocational choice and career achievement, (b) characteristics which lead to stability of the kind and level of work a person performs, (c) characteristics which lead to change or instability, and (d) the fact that some people make choices that are congruent with their vocational assessments and that others do not. (8 p ref)

8577. Huk, Jerome E. (U Colorado) **Pre-empirical considerations for a behavioral science.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3466.

8578. Kirsch, Hildegard. **Crossing the ocean: Memoirs of Jung.** *Psychological Perspectives*, 1975(Fal), Vol 6(2), 128-134.—Discusses "Jung the human being" and his profound influence on the writer's life and on the lives and thoughts of others. His honesty, his dedication to the self, and his ability to make contact equally with peasants and philosophers, were among his outstanding traits. The ceremonies celebrating his 80th birthday are described.

8579. Knudsen, Harald. (Deutsche Akademie für Psychoanalyse, Berlin, W Germany) **[Ego-psychological aggression theory from the viewpoint of the philosophy of history.]** (Germ) *Dynamische Psychiatrie*, 1975, Vol 8(5), 273-289.—Considers E. Bloch's philosophical views regarding the formulation of metatheories in science and attempts to discover what these views imply for psychoanalysis. The systematic retrogression in examining drive formation on the basis of historical categories (when dealing with ego identity and relating this formation to a primary group) may free patients from distorted drive formation and turn them towards health and creativity. This may be applied to either individual or group therapy.—H. Bruml.

8580. Kreinheder, Albert. (Private practice, West Los Angeles, CA) **Alchemy and the subtle body.** *Psychological Perspectives*, 1975(Fal), Vol 6(2), 135-143.—Describes the psyche, psychological procedures, and certain phases of psychoanalysis (especially Jungian concepts) in terms of the principles, beliefs, and practices of alchemy.

8581. Krupp, Gary J. (U Southern California) **R. D. Laing in historical and philosophical perspective.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3502.

8582. Lagache, Daniel. **[Psychoanalysis as an exact science.]** (Fren) *Psychologie Française*, 1974(Dec), Vol 19(4), 217-246.—Speculates that to consider psychoanalysis as an exact science is to yield to the myth of objectivity. The conducting of psychoanalysis is compared to the steps of the scientific method. Psychoanalysis may be an exact science at least in part. The appearance of inexactitude derives principally from the enormous amount of material to be dealt with and the overestimation of its unreality. The satisfaction an analyst finds in exactitude is a protection against

unproductive theorizing and guarantees more efficiency in therapy. This satisfaction is achieved by the process of sublimation in action. (21 ref.)—*K. J. Hartman*

8583. Lombardo, Thomas J. (U Minnesota) J. J. Gibson's ecological approach to visual perception: its historical context and development. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3534-3535.

8584. Malone, John C. (U Tennessee, Knoxville) William James and B. F. Skinner Behaviorism, reinforcement, and interest. *Behaviorism*, 1975(Fal), Vol 3(2), 140-151.—Discusses similarities and differences between James and Skinner and criticizes Skinner for failing to provide an adequate description of complex behaviors. Similarities include opposition to a dualistic approach in which mind and body are seen as qualitatively different, and to the notion that mental phenomena are causal entities. In addition, there is agreement that mental events are actions and not copies of external reality. Skinner is criticized for providing an oversimplified account of complex phenomena and translating such a description to operant terms. James is seen as being more painstaking in his description and more cautious in applying general principles. In particular, James's account of the concept of interest is seen as being more cognizant of the subtleties and complexities involved, whereas Skinner's translation of the concept to operant reinforcement is faulted as too narrow. (29 ref.)—*S. M. Levin*

8585. McDowell, J. J. (State U New York, Stony Brook) Behavior modification's existential point of departure. *Behaviorism*, 1975(Fal), Vol 3(2), 214-220.

Argues in favor of the hypothesis that behavior modification developed out of an existential world-view. If this were true, then such a view is an appropriate basis for the clinical practice of behavioral modification. The essential components of the existential view—emphasis on sheer existence; phenomenology, or focus on the lived world of immediate experience, being-in-the-world, and relational truth, or emphasis on subjective rather than objective truth—are shown to be compatible with and characteristic of behavior modification. The concept of existence corresponds to behavior in the behavior modification system. The centrality of phenomenology in the existential system corresponds to the behaviorist's concern with antecedent stimuli, stimulus consequences, and the manifest phenomena of behavior rather than with inferred psychodynamic processes. Being-in-the-world and relational truth are also seen as being consistent with basic principles of behavior modification. The former corresponds to the behaviorist's emphasis on a reciprocal interaction between behavior and the environment, while the latter is correlated with the behavior modifier's focus on the client's actual experience of the world. (24 ref.)—*S. M. Levin*

8586. McPeak, William R. (Syracuse U, School of Social Work) Family interactions as etiological factors in mental disorders: An analysis of the American Journal of Insanity, 1844-1848. *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1327-1329.—A review of the first 4 volumes of the *American Journal of Insanity* indicated that the primary etiological factor noted by authors during that period was disturbed brain functioning, although emotional factors were often

mentioned as additional explanations for mental illness. The influence of familial factors and interactions on the development of mental illness was not mentioned. It is concluded that psychiatry at this time did not yet recognize the importance of the biological and environmental factors which today are central to psychiatric theory.

Journal abstract

8587. Mellick, David C. (Ola, State U) The metaphysics of behavior. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5251.

8588. Moore, Jay. (U California, San Diego) On the principle of operationism in a science of behavior. *Behaviorism*, 1975(Fal), Vol 3(2), 120-138.—Contrasts the conventional interpretation of operationism with the radical behavioristic interpretation. According to the former, the meaning of a linguistic symbol is reducible to a set of public observations designed to establish agreement regarding the symbol's referent. The radical behavioristic interpretation states that operationism consists of assessing the extent to which external stimulus conditions and the person's response influence the psychologist's verbal description of a behavioral event. The conventional interpretation is seen as having been subverted to support mentalistic analyses of behavior in which inner events attain causal status. While this interpretation allowed mental phenomena to be described in physicalistic terms, the underlying concept of man remained that of an organism who operates in 2 dimensions and whose behavior is nothing more than a manifestation of internal, autonomous events. The behavioristic position is that private stimuli, while presenting the problem of limited accessibility, are not qualitatively different from other stimuli and can be regarded as part of the stimulus complex that occasions overt behavior. (21 ref.)—*S. M. Levin*

8589. Pavio, Allan. (U Western Ontario, London, Canada) Neomentatism. *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 263-291.—Discusses the resurgence of interest in the concept of mentalism which began in North American psychology during the 1960's. Neomentatism is defined as the objective study of the structure, functions, and development of mental representations. It differs from old introspective mentalism in that it relies on objective, behavioral methods. It differs from behaviorism, old and new, in its emphasis on the study of mental representations. It differs from other varieties of contemporary cognitive psychology in its relative emphasis on operational approaches as opposed to rationalism, and on the use of metaphors drawn from psychology rather than the digital computer. Recent evidence supports the theoretical and heuristic value of the neomentalmistic approach and challenges the sufficiency of behavioristic and cognitive alternatives. (French summary) (3/p ref.)—*Journal abstract*

8590. Parry, Thomas A. (Graduate Theological Union, Berkeley, CA) The triumph of Eros: The prospects for community after Freud. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5315.

8591. Powell, Robert C. (State U New York, Upstate Medical Ctr, Syracuse) Mrs. Ethel Phelps Stokes Hoyt (1877-1952) and the Joint Committee on Religion and Medicine (1923-1936): A brief sketch. *Journal of*

Pastoral Care, 1975(Jun), Vol 29(2), 99-105.—Sketches the life of Mrs. Hoyt, an early worker in clinical pastoral education, who supported the formation of the Council for the Clinical Training of Theological students, and the Federal Council of Churches' Commission on Religion and Health. (53 ref)—*B. Smith*.

8592. **Salcey, Dennis.** (U Texas, Graduate School of Social Work, Arlington) **A proposal to merge humanist and behaviorist perspectives.** *Social Casework*, 1975(Oct), Vol 56(8), 468-479.—Proposes a synthesis of humanist and behaviorist perspectives, starting with the theory that man is the creator of meaning and incorporating behaviorist methods within this view. (49 ref)—*M. W. Linn*.

8593. **Simonton, Dean K.** (U Arkansas, Fayetteville) **Invention and discovery among the sciences: A PR-technique factor analysis.** *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 275-281.—Explored how discoveries and inventions in 9 scientific disciplines cluster over time in Western culture. The transhistorical sample consisted of 12,761 major scientific contributions tabulated into 44 time-units (full, half, and quarter centuries) extending from 800 BC to 1900 AD. A factor analysis was executed on the correlations among the 9 measures after partialing out 3rd-order polynomial time trends. Three orthogonal factors appeared: concrete (chemistry, physics, and biology), abstract (astronomy and mathematics), and applied (technology, geography, and geology) clusters. Medicine loaded moderately on the concrete and abstract clusters. Three types of explanations are discussed—personological, interpersonal, and sociocultural—with suggestions for how they might be tested. (29 ref)—*Journal abstract*.

8594. **Van Geert, Paul.** **The structure of scientific activity: A small investigation of a concept.** *Communication & Cognition*, 1975, Vol 8(1), 23-43.—Considers concepts needed to describe the nature of scientific activity; and presents a questionnaire based on these concepts, which provide a basis for determining conflicting opinions about the structure of scientific activity.—*R. L. Cook*.

8595. **Vargas, Ernest A.** (West Virginia U) **Rights: A behavioristic analysis.** *Behaviorism*, 1975(Fal), Vol 3(2), 178-190.—In a behavioristic analysis, a rights statement is an assertion about the use of one's self, others, or things to obtain reinforcement or avoid punishment. The individual making the assertion mediates the reinforcement or punishment. In other words, consent is obtained from the person to proceed with some action concerning him. Rights statements can be functionally analyzed in the same manner as other behavior, with the aim being to denote the controlling variables which give the statements meaning. The focus is on the reason people make rights statements rather than on their validity. The traditional ethical framework regards rights as being based on the notion that man is free to make choices, while the radical behaviorist regards every action of the individual as the result of his history and his current situation. A significant problem is that criticism coming from ethical communities emphasizing free choice, if readily acceded to, could inhibit the growth of a powerful and useful behavioral technology.—*S. M. Levin*.

8596. **Wexler, David B.** (U Arizona, Coll of Law) **The surfacing of behavioral jurisprudence.** *Behaviorism*, 1975(Fal), Vol 3(2), 172-176.—The recent emergence of behavioral jurisprudence has resulted from the influence of behaviorism on legal scholarship. Legally-trained individuals are recognizing the usefulness of contingency analysis in dealing with legal problems. Defining legal concepts in behavioral terms is seen as preferable to the cognitive and inherently vague terms traditionally employed.—*S. M. Levin*.

8597. **Widlocher, D.** (U Paris VI, France) **[The identity of psychology and psychoanalysis in the work of Daniel Lagache.]** (Fren) *Psychologie Française*, 1974(Dec), Vol 19(4), 247-254.—Reviews achievements of Daniel Lagache (1903-1972) as a psychologist, psychoanalyst, and psychiatrist. Lagache has attempted to find a point of convergence of the 3 orientations. His search has led him from phenomenology, through psychologism, to reverie. Lagache sought to reduce the tension existing between the orientation of the sciences of nature and of the nature of man and thus between experimental and clinical methods.—*K. J. Hartman*.

Research Methods & Apparatus & Computer Applications

8598. **Blackburn, I. M. et al.** (MRC Brain Metabolism Unit, U Edinburgh, England) **Infrared time lapse photography: A technique for analysing night movement in affective patients.** *Journal of Psychiatric Research*, 1975(Aug), Vol 12(2), 69-72.—Describes the use of infrared time lapse photography to record the number and types of movements during the night in 5 depressed and 2 manic patients and in 7 controls. All Ss were given 120 mg sodium amytal at 10 PM. Manic patients had the greatest number of movements and depressives the fewest ($p < .05$). Depressives and normals did not differ in the total number of movements, but normals rotated more often than depressives ($p < .01$). The age difference between controls and patients was significant ($p < .01$). All patients showed irregular bursts of movement, but controls were not consistent in this sleep pattern. Patients showed more fragmentary activity than controls, whose turning movements were more organized. No systematic attempt was made to assess the effect of drugs or sleep on the amount and type of night activity. The use of infrared time lapse photography provides an objective and easily scorable technique for night activity and should prove useful in future studies of dyskinesias.—*J. Sorokac*.

8599. **Brightman, Donald E.** (Hofstra U) **Experiment-er bias effect as a function of task ambiguity and expectancy controls.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4623.

8600. **Břoušek, Ján.** (Výskumný ústav detskej psychológie a patopsychológie, Bratislava, Czechoslovakia) **[The development of apparatus techniques in experimental psychology.]** (Slok) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(3), 277-282.—Notes that new developments in experimental psychology, electronics, automation, and miniaturization require the use of specific instruments and equipment for programming, neuropsychological measurements, registration, and data process-

ing in order to keep up with research and diagnosis.—*Journal summary.*

8601. **Brůžek, Ján.** (Výskumný ústav psychologie a patopsychologie, Bratislava, Czechoslovakia) [An apparatus to indicate a correctly pronounced "R" sound.] (Slovak) *Psychologická Patopsychologická Práca*, 1975, Vol 10(1), 79-84.—Describes a device based on the principle of a double frequency filtration of 24 Hz, the characteristic of the correct articulation of the "r" sound (in Czech). This is modulated to higher voice frequencies and through further amplification and filtering it is translated into lighting a bulb whenever the correct sound is pronounced. This apparatus is used in remedial speech lessons with children who do not differentiate sufficiently for correct pronunciation or who have a lowered hearing discrimination.—*H. Bruml.*

8602. **de Zeeuw, G. & Soudijn, K. A.** (U Amsterdam, Netherlands) [The justification of investigative strategies.] (Dutch) *Nederlandsche Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Sep), Vol 30(7), 621-647.

Questions the validity of several research strategies often used in the social sciences, e.g., statistical approaches, which are felt to lack predictability. A substitute approach, in the form of a Darwinian concept of viability, is suggested and described (64 ref).—*A. J. Ter Keurst.*

A device for the study of verbal stimuli in experimental complex situations.** *International Journal of Psycholinguistics*, 1975, No 4, 71-81. Presents 5 suggestions for designing controlled experiments in psycholinguistics, and describes a modified tachistoscopic apparatus for presenting visual stimuli. Evaluative data from experiments with the device are briefly reported, and theoretical implications of experimental psycholinguistics are discussed. (French & Russian summaries) (15 ref)

8608. **Totthmitt, Frank J. & Hammond, Ian J.** (Max Planck Inst für biologische Chemie, Göttingen, W Germany) **Single cell recordings from the visual cortex of a computer.** *Psychological Research*, 1975, Vol 38(1), 65-80. The visual Y-system which is believed to mediate scanning and focusing control of the eye movements was simulated in part by a computer model consisting of a receptive matrix, neural nets, and a series of gates. These were fed into a topographical record of the place, velocity, and direction of the stimulus material on the receptive matrix. These informational components happen to be the necessary requirements to enable the monitor of the eye muscles, presumably the superior colliculus, to generate motor commands for the ocular scanning and focusing activities.—*R. Gunter.*

8609. **Van Slieden, P. J.** (Rijksuniversiteit Groningen, Netherlands) [Toward a methodology of empirical thinking in the social sciences.] (Dutch) *Nederlandsche Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Sep), Vol 30(7), 601-619. Discusses the relationship between the regulative and the predictive cycles of scientific thinking in the social sciences. Regulative thinking is characterized by research into the practical and empirical aspects of social living. Predictive thinking is characterized by the development of laws and theories. The barriers that prevent regulative thinking from becoming predictive are discussed. The attempt to make social science a set of conceptual and methodological tools for understanding reality has blurred the differences between the two types of thinking, when their complementary relationship is understood, the professional community may develop into a scientific one (46 ref).—*A. J. Ter Keurst.*

The construction of the device and its usefulness when simultaneous electrophysiological recordings are desired is illustrated with a cat. (24 ref)

PSYCHOMETRICS

8611. **Airasian, Peter W.; Madaus, George F. & Woods, Elinor M.** (Boston Coll) **Scaling attitude items: A comparison of scalogram analysis and ordering theory.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 809-819. Compared an ordering-theoretic method of identifying item hierarchies with scalogram analysis in the evaluation of an 8-item attitude measure which assessed progressive and traditional views of education. Data were collected in a survey of a random sample of 178 parents of public school children. The scalogram analysis revealed that the items did not form a unidimensional and cumulative hierarchy. The ordering-theoretic analysis identified a branched, nonlinear hierarchy which had higher reproducibility and scalability than the linear hierarchy identified by the

scalogram analysis. Results support the use of ordering theory in defining item hierarchies in attitudinal measures. (23 ref)—*Journal abstract*.

8612. Allan, Lorraine G. (McMaster U, Hamilton, Canada) **Temporal order psychometric functions based on confidence-rating data.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 369-372.—Psychophysical tasks involving confidence judgments allow the simultaneous generation of a family of psychometric functions. S. Sternberg et al (1975) have demonstrated the power of the multiple-function approach in evaluating models concerned with specifying the source of errors in judgments of simultaneity and temporal order. In the present experiment with 6 paid Ss data from a temporal order task requiring confidence ratings were examined, and a number of models for successiveness and order judgments were evaluated.—*Journal abstract*.

8614. Bernardin, H. John; LaShells, Mary B.; Smith, Patricia C. & Alvares, Kenneth M. (Bowling Green State U) **Behavioral expectation scales: Effects of developmental procedures and formats.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 75-79.—Compared differences in developmental procedures and formats for behavioral expectation scales for effects on interrater reliability, leniency error, rating variability across dimensions, and discriminability. Two different sets of scales were developed using critical incidents that were placed on one dimension category either 50-60% of the time or 80% or greater of the time. In one procedure, Ss first placed each incident into a dimension category and then rated the desirability of each incident in the context of that category on a scale from 1 to 7. In another procedure, Ss placed incidents into categories and another group of Ss rated their desirability. Ratings were made on either continuous or noncontinuous 7-point scales, scales with or without definition-clarification statements, and were scored by either a summary rating procedure or a method which required the rescaling of new incidents. Results from a series of studies involving 258 raters and 81 ratees indicate that there are optimal developmental procedures and formats for behavioral expectation scales.—*Journal abstract*.

8615. Brennan, Robert L. (State U New York, Stony Brook) **The calculation of reliability from a split-plot factorial design.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 779-788.—Examines how the reliability of school (or classroom) means should be estimated when persons are nested within schools (or classrooms). The use of variance components in the estimation of reliability from a randomized block (RB) design is reviewed. This rationale is then extended to the estimation of reliability (or generalizability) coefficients in a split-plot factorial (SPF) design with persons nested within schools. Through the use of variance components from the SPF design, estimates of reliability for schools and for persons within schools are derived, and the reliability for persons within schools from an SPF design is compared with the reliability for persons from an RB design. The reliability for schools from an SPF design is

then compared with the reliability for school means from an RB design.—*Journal abstract*.

8616. Chandra, Subhas. (U South Pacific, School of Education, Suva, Fiji) **Some patterns of response on the Queensland test.** *Australian Psychologist*, 1975(Jul), Vol 10(2), 185-192.—The Queensland Test of General Cognitive Ability (QT), developed for cross-cultural research, was studied in Fiji. No racial differences were found between the performances of Indians and Fijians, supporting the claim that the test is culture fair. Urban Ss scored higher than rural Ss. On the Pattern Matching subtest, administered to 150 Indian and Fijian children aged 8-13 yrs, Fijian females scored lower than Indian females. This was attributed to cultural differences. (15 ref)—J. C. Figurelli.

8617. Crockett, Bruce K.; Rardin, Max W. & Pasewark, Richard A. (U Wyoming) **Relationship between WPPSI and Stanford-Binet IQs and subsequent WISC IQs in Headstart children.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 922.—18 males and 24 females were tested on 2 IQ tests in the concluding weeks of a Head Start program in 1968-1969 and were retested on the WISC in 1972. In comparison to the Wechsler Preschool and Primary Scale of Intelligence, the Stanford-Binet seems better able to predict WISC scores.

8622. Jones, Phillip D. & Kaufman, Gary G. (Internal Revenue Service, Cincinnati, OH) **The differential formation of response sets by specific determiners.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 821-833.—Attempted to determine if both position- and alternative-length specific determiners cause a differential formation of response sets on tests in high and low scoring groups. A 46-item vocabulary test with 10 alternate forms varied by type and frequency of specific determiners was administered to 1,000 undergraduates. Results indicate that as the frequency of specific determiners increased, they formed increasingly

strong but differential guessing response sets in high and low scoring groups; however, the magnitude of the effect was much stronger for position-specific determiners. Results are interpreted in terms of differing frequencies of appearance in existing tests and the actual nature of the responses examinee makes to multiple-choice items. (16 ref)—*Journal abstract*.

8623. Lundberg, Ulf & Devine, Bernard. (U Stockholm, Sweden) **Negative similarities.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 797-807. Exp I, with 150 psychology students, exactly replicated G. Ekman's (see PA, Vol 30:4077) study, where the Ss had been requested to estimate positive similarity between pairs of emotional terms. Exp II, with a 2nd group of 150 Ss, was carried out in the same way except that the Ss were also requested to give negative estimations when they considered that a pair of words described feelings which were opposite to each other. Using factor analysis it was found that the negative estimations obtained in Exp I were represented as zero ratings in Exp I. Exp II also yielded some additional information which was considered to be psychologically meaningful. A reanalysis of Ekman's data gave almost exactly the same result as Exp I in the present study. 8633. Conger, Anthony J. & Conger, Judith C. (Ctr for Educational Research & Evaluation, Research Triangle Park, NC) **Reliable dimensions for WISC profiles.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 847-863. Measures of multivariate reliability are calculated for profiles of WISC subscales on 3 age groups (7, 10, and 13 yrs old). Profile dimensions based on reliability considerations are also established and matched across age groups and with factor analytic dimensions. While all possible differences among individual subscales are quite unreliable (about .51), a reduced set of 5 uncorrelated dimensions can be found with a more satisfactory reliability (about .87). In unrotated form, the maximally reliable dimension is essentially total IQ, and the 2nd maximally reliable dimension closely resembles a verbal-performance contrast. 4 of the 5 rotated dimensions give a good match across age groups and with verbal comprehension, relevancy, perceptual organization, and maze-specific factors. Guidelines for the interpretation and use of WISC subscale profiles are provided for both clinical and research uses. (16 ref)—*Journal abstract*.

8638. Elton, Charles F. & Rose, Harriett A. (U Kentucky) **A vocational interest test minus sex bias.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 207-214.—Vocational Preference Inventory (VPI) responses from 110 males and 180 females were subjected to a Rasch item analysis, 1 of a class of latent trait models. After elimination of 22 items which did not fit the model, a sex-free form of the VPI was obtained. Group interest scale scores are presented for each of the J. L. Holland scales, and data are produced which indicate that no violence was done to the Holland coding system.—*Journal abstract*.
8639. Evans, Roy; Ferguson, Nell; Davies, Pat & Williams, Phillip. **Reliability of the Draw-A-Man Test.** *Educational Research*, 1975(Nov), Vol 18(1), 32-36.—Examined 3 reliability characteristics of D. Harris's revision of F. L. Goodenough's Draw-A-Man Test when used with 5-yr-old school entrants. The test was individually administered to 90 Ss on 2 occasions, with an average time-separation of 2 wks. Three persons administered and scored the drawings, and the reliability coefficients associated with temporal stability (same tester), temporal stability (different testers), and marker error were examined. Results indicate that when experienced testers are used, the reliability of the scale is of the same magnitude as that reported in previous studies involving older children. It is also suggested that with school entrants, the influence of different trained testers on the final rank order of scores is *probably* quite small. Results also show that with drawings of 5-yr-olds there is less likelihood of the scorer developing a consistent subjective marking standard than is the case with drawings of older children. The test is considered more useful for the comparison of groups than for individual school entrants.—*Journal abstract*.

8642. Goebel, Ronald A. & Satz, Paul. (U Florida) **Profile analysis and the abbreviated Wechsler Adult Intelligence Scale: A multivariate approach.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 780-785. The abbreviated WAIS by P. Satz and S. Mogel, while yielding high correlations with the standard WAIS scales, has been criticized for introducing sufficient subtest unreliability to prohibit profile interpretations. Using multivariate profile analytic techniques (R. B. Cattell's r , and hierarchical grouping analysis) and sampling from both brain-injured and psychiatric populations (n s = 118 and 173, respectively), these forms were compared in terms of overall pattern similarity and actuarial classification agreement. For both populations, results provide strong evidence that the Satz-Mogel abbreviated WAIS may be substituted for the standard WAIS for both general IQ assessment and global profile analysis. It is argued that the multivariate techniques of the present study provide statistically more reliable inferential base for WAIS profile analysis than does the comparison of individual subtests. (15 ref)—*Journal abstract*.
8643. Jensema, Carl. (Gallaudet Coll, Office of Demographic Studies) **Reliability of the 16 PF Form B for hearing impaired college students.** *Journal of Rehabilitation of the Deaf*, (Jan), Vol 8(3), 14-18.—Reports that the 16 PF Form B, designed for low-literate adults with normal hearing, demonstrates poor reliability with hearing-impaired college freshmen, and this must be taken into account when interpreting this test with such populations.—*A. Barclay*.
8644. Klapprott, Jürgen. (U Erlangen-Nürnberg, Social Science Research Ctr, W Germany) **[Short report on a Machiavellianism scale.]** (Germ) *Diagnostica*, 1975, Vol 21(4), 143-147.—Reports preliminary data obtained with a new German scale, constructed on the basis of R. Christie's 1970 definition. 94 rationally formulated Machiavellianism items and 29 filler items were administered to 230 students and factor analyzed. A final scale of 42 items is presented. Each item had a high loading on the 1st factor, and high content saturation, and was independently judged to fit the definition. 28 of the 29 filler items had near-zero content saturations. For 2 samples, alpha reliabilities of 0.89 and 0.93 were obtained with the final scale. The sex differences reported were insignificant, but significant differences were found between sociology and economics students, and between these 2 groups of students and students of education.—*M. Morf*.
8645. Lachar, David; Klinge, Valerie & Grisell, James L. (Lafayette Clinic, Detroit, MI) **Relative accuracy of automated MMPI narratives generated from adult norm and adolescent norm profiles.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 20-24.—Studied the effect of patient and interpretive narrative characteristics on the judged accuracy of pairs of automated narratives generated by 2 types of norms using MMPI protocols of 100 adolescent psychiatric patients. 25 raters (clinicians and advanced psychiatry residents) were naive as to which narrative was generated by which set of norms and received computer printouts in which all nonnarrative portions (scale scores, critical items, clinical profile) were omitted. Narratives generated from adolescent norm profiles were rated as significantly more accurate than narratives generated from adult norm profiles. Only 1 variable (narrative length) was related to judged accuracy within a norm group, though 2 variables (age and sex) affected the relative accuracy of narrative pairs. Narratives generated from adolescent norms were rated as significantly more accurate for younger patients and for females than were those generated from adult norms.—*Journal abstract*.
8646. Langfeldt, Hans-Peter & Fingerhut, Walter. (Pädagogischen Hochschule Rheinland, Seminar für Psychologie, Bonn, W Germany) **[Development of a teacher-attitude questionnaire (LEF-3).]** (Germ) *Zeitschrift für Entwicklungspsychologie und Pädagogische Psychologie*, 1975, Vol 7(1), 16-23. Describes construction of a questionnaire, consisting of the following 3 scales obtained by factor analysis which proved consistent in tests with 2 samples of elementary school teachers: Scale 1 measures conservative and authoritarian atti-

tudes concerning classroom behavior; Scale 2 measures emotionally unstable and unplanned classroom behavior; Scale 3 measures general cultural interests. Objective scoring procedures are reported. Initial investigations revealed satisfactorily high coefficients of reliability. Similarities to other inventories are interpreted as evidence of content validity. Construct validity is inferred from intercorrelations between the LEF-3 and measures of extraversion, neuroticism and rigidity, age, and sex of teachers. (15 ref)—*English summary.*

8647. Lindstrom, Lorel & Kahn, Marvin W. (U Arizona) **Discriminative effectiveness for two psychiatric screening instruments for a gerontological population.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 151-152. Evaluated the ability of 2 screening instruments for geriatric psychiatric patients: one by A. Simon et al and the other by R. D. Savage and P. G. Britton. The overall correctness in discriminating was 66% for the Simon et al scale and 74% for the Savage and Britton scale, although the former misidentified normals as impaired, and the latter misidentified impaired Ss as normal.

8657. Russell, Elbert W. (VA Hosp, Miami, FL) **A multiple scoring method for the assessment of complex memory functions.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 800-809. Describes a new memory scoring method. Using the Wechsler Memory Scale as its base, it takes into consideration recent developments by scoring lateralized verbal and figural memory and long- and short-term memory. Six independent memory scales were developed: verbal short term, verbal long term, verbal % retained, figural short term, figural long term, and figural % retained. Studies of 105 Ss (30 normal, 75 brain damaged) demonstrated that these scales are reliable and valid. They were quite sensitive to brain damage in general and are affected by lateralized damage. Norms were related to the Halstead-Reitan Impairment Index, so that memory impairment scores are directly comparable to scores for subtests in that battery. (24 ref)—*Journal abstract.*

8658. Shearer, Eric. (School Psychological Service, Cheshire County Council, England) **A restandardization of the Burt-Vernon and Schonell Graded Word Reading Tests.** *Educational Research*, 1975(Nov), Vol 18(1), 67-73.—Reports results of a large-scale restandardization of the 2 tests to produce reliable norms and to standardize administration and scoring procedures. The data were recorded in such a way as to enable the production of revised orders of words to reflect contemporary usage and to relate reading attainment, as assessed by the tests, to sex, school organization, and socioeconomic status.

8659. Strnadová, Marie. (FN-Motol, Ofalmopedický, Prague, Czechoslovakia) **[A tactile block test for blind children.]** (Czec) *Psychologia a Patopsychologia Dieťa*, 1975, Vol 10(2), 151-164. Norms based on the performance of blind children (29 girls and 28 boys) 6-13 yrs old were established for a tactile block test using the experience of Wechsler, Kohs, and Gesell. The test includes 4 smooth blocks and 9 with tactually different surfaces, and a set of 9 models with different surfaces. Norms were also developed on 50 children with residual vision. It is suggested that these tests may help to assess mental levels of minimal brain dysfunction in the blind.—*Journal summary.*

8664. Wakefield, James A.; Bradley, Peggy E.; Doughtie, Eugene B. & Kraft, Irvin A. (U Houston) Influence of overlapping and nonoverlapping items on the theoretical interrelationships of MMPI scales. *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 851-857.—Scored 100 adults' MMPI protocols for (a) items appearing only on 1 scale (nonoverlapping) and (b) items appearing on more than 1 scale (overlapping). The correspondence of these 2 sets of scales to a theoretical structure composed of neuroticism, psychoticism, and extraversion dimensions was considered using a method presented by J. A. Wakefield and E. B. Doughtie (see PA, Vol 51:8049). The correspondence of the scales composed of nonoverlapping items with the theoretical structure was insignificant. The correspondence of the scales composed of overlapping items conformed extremely closely to the theoretical structure. Results indicate that neuroticism, psychoticism, and extraversion factors found in the MMPI are due to items that appear on more than 1 scale. It is argued that the factors attributable to the overlapping items validly represent the similarity of the criteria against which the scales were validated. (17 ref)—*Journal abstract*.

8672. Feather, N. T. (Flinders U South Australia, Bedford Park) Factor structure of the conservatism scale. *Australian Psychologist*, 1975(Jul), Vol 10(2), 179-184. Reports the results of a factor analytic inquiry into the structure of the Conservatism Scale, which consists of 50 items related to concepts such as the death penalty, apartheid, disarmament, hippies, and the theory of evolution. Data came from a 1972 survey of 515 children and adults (14 yrs old and older) who completed the scale. Of the 1st 4 unrotated factors, General Conservatism accounted for 35% of the variance, Colored Immigration for 13%, Divorce for 11%, and Mixed Groups for 7%. Varimax rotation yielded 11 factors, including Religious Fundamentalism, Artistic Bohemianism, Attitude to Youth, and Sexual Freedom. Results support a general factor of conservatism underlying social attitudes, plus some complex bipolar factors. They also support a multiple factor solution involving different group factors depending on one's view of factor analytic procedures.—*J. C. Figurelli*.

8676. Huck, Schuyler W. & Sutton, Cary O. (U Tennessee) Some comments concerning the use of monotonic transformations to remove the interaction in two-factor ANOVA's. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 789-791.—In his discussion of 2-factor experiments, B. J. Winer (1971) points out that it may be desirable to remove the interaction (and thus obtain additivity of effects) through a monotonic data transformation. The present authors extend A. Lubin's (see PA, Vol 36:5AE07L) discussion of ordinal and disordinal interactions by introducing the concept of "dual-ordinal." This concept is important since a transformation cannot bring about additivity of effects unless the interaction dual-ordinal in nature. For the applied researcher, a simple rule-of-thumb is set forth which allows one to determine, through visual inspection

of a single interaction graph, whether or not an interaction is dual-ordinal.—*Journal abstract.*

8677. Klein, Donald F.; Rom, Donald C. & Feldman, Sydney. (Long Island Jewish-Hillside Medical Ctr, Hillside, NY) Analysis and display of psychopharmacological data. *Journal of Psychiatric Research*, 1978(Apr), Vol 12(2), 125-147.—Six major points are presented: (a) The assumptions underlying analysis of covariance (ANOCOVA) are reviewed and their relationship to psychopharmacological data distributions stated. An alternative method of analysis that makes fewer assumptions, such as partition of contingency tables, is considered desirable. (b) J. Cohen's (see PA, Vol 48:8090) K (κ) provides a suitable basis for an alternative method. (c) An a priori method of searching for drug-typical changes is described. This method of defining drug-typical and placebo-typical pre- to postsymptom change patterns by maximizing K is demonstrated. (d) The necessary formulas for calculating K may be interpreted, under certain common circumstances, as the proportion of drug-treated patients who actually benefit from drug treatment rather than placebo treatment. (e) Examples comparing ANOCOVA with maximization of K and an alternative partitioning method are presented and similarities and differences in results pointed out. (f) The value of this method for easy comprehensible display of drug effects is emphasized. (23 ref) *Journal summary.*

8679. Koslowsky, Meni & Bailit, Howard. (U Connecticut, Health Ctr) A measure of reliability using qualitative data. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 843-846. Notes that, in many research activities, the data are unordered or qualitative. In such circumstances, interrater reliability is usually measured by calculating a percentage of agreement score between judges. The present paper expands on an equation first introduced by L. A. Goodman and W. H. Kruskal (1954) for obtaining a reliability measure of 1 item. This formula determines inter-rater reliability for a series of items across many Ss. The statistic that results is easily interpreted and in many ways is analogous to the conventional reliability for quantitative data. *Journal abstract.*

number up to 1,000 and even larger. Results compare favorably with those from other excellent methods.

Journal abstract.

8682. O'Brien, Ralph G. (U Virginia) Comment on "Some problems in the nonorthogonal analysis of variance." *Psychological Bulletin*, 1976(Jan), Vol 83(1), 72-74.—M. I. Appelbaum and E. M. Cramer (see PA, Vol 52:8956) described ignoring tests of main effects as "irrelevant" when 1 eliminating test is significant in a 2-way nonorthogonal analysis of variance. It is stated by the present author that such tests are not irrelevant, however, because there are situations when A eliminating B is significant and A ignoring B is nonsignificant making it reasonable to include B in the model, even though the eliminating test for B is nonsignificant. An example is given, and the necessary modifications to the Appelbaum and Cramer procedure are proposed. In addition, another ignoring-eliminating significance pattern is shown to be impossible.—*Journal abstract.*

(b) In all its consequences, it may be too complicated to be used by a human S, a simpler strategy might be more adequate. (c) Some of the conditions of the model, like independence of cues for probability revision and for utility assessment, are hardly ever tested and probably difficult to meet at all. (d) It is questioned whether deterministic models are not too strict to predict human behavior, such that they should be replaced by probabilistic ones. The emphasis of this paper, however is not to doubt the applicability of the model in principle but rather to highlight problems where more research is needed. (29 ref)—*Journal abstract.*

(Pennsylvania State U, Hershey Medical Ctr, Hershey) **Independent functioning of the two cerebral hemispheres for recognizing bilaterally presented tachistoscopic visual-half-field stimuli.** *Cortex*, 1975(Jun), Vol 11(2), 132-143.—Bilateral tachistoscopic presentation of verbal stimuli produces a significantly larger right visual half-field (VHF) superiority than does unilateral presentation, when fixation is controlled by a center digit. This experiment with 83 students and university employees tested whether the increased asymmetry was due to (a) Ss attending the right VHF and ignoring the left VHF or (b) interference between the hemispheres due to competition for the left hemisphere language areas. Words, shapes, and pictures of faces were presented bilaterally to each VHF, with fixation controlled by a center digit. In 3 conditions, the same type of stimuli was presented in each VHF. In 2 conditions, words were presented to 1 VHF and nonverbal stimuli to the opposite VHF. It was found that the stimulus pairings did not affect VHF asymmetry for any stimulus. Words showed a large right VHF superiority in all conditions. Shapes showed a significantly smaller right VHF superiority in all conditions. It is concluded that attentional factors were not important since shapes could be recognized accurately from the left VHF without lowering verbal recognition from the right VHF. Thus the low recognition accuracy from the left VHF was specific for verbal stimuli rather than attentional. The interference hypothesis was not supported since all the right VHF stimuli were associated with low recognition of words from the left VHF.—*Journal summary.*

(Pedagogical U Saarland, Saarbrücken, W Germany) **[The influence of external factors on the concentration and resistance to stress of preschoolers.]** (Germ) *Psychologie in Erziehung und Unterricht*, 1973, Vol 20(4), 235-243.—Tested the non-verbal intelligence of 130 6 yr old kindergartners, using the Columbia Mental Maturity Scale. Ss were divided into parallel groups of different sizes. On the test, all relevant concrete objects (e.g., birds, houses, trees) had to be crossed out and a dot had to be placed next to each irrelevant object. When free to stop at any time, the 1st student ceased work after 8 min. All Ss were able to work for 20 min when prodded. When working in groups of 2 and without pressure, 90% of Ss persisted for 20 min; when working in groups of 7, 70% worked the full 20 min. Standard deviation and mean of achievement were higher in a noise condition but not in a dark condition, but the percentage of errors increased. There were now significantly more errors when abstract instead of concrete objects had to be crossed out. (English abstract) —W O Horn

relationship between activation and performance by comparing the performance of 25 male 21-34 yr old Ss in a choice-reaction task at 5 different work loads on a bicycle ergometer. Heart rate was used as an index of activation. Results support the hypothesis, with performance being more efficient at a medium activation level than at high and low levels. (20 ref)—*Journal abstract*.

8713. Taub, John M. & Berger, Ralph J. (U Virginia, Medical School, Charlottesville) **The effects of changing the phase and duration of sleep.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 30-41.—Studied the relative effects of extended sleep, reduced sleep, and shifts of habitual sleep time on subsequent performance and mood (assessed by the Activation-Deactivation Adjective Check List and a multifactorial adjective checklist by M. Lorr et al). 10 healthy male university students who regularly slept 9.5-10.5 hrs were the Ss. Measurements were obtained from a 45-min auditory vigilance task, a 5-min E-paced addition task, and a mood measure 30 min after awakening, at midday, and in the evening following 5 EEG-monitored nights of sleep. The experimental treatments comprised a 9.5-10.5 hr habitual sleep condition and 4 conditions in which the regular sleep period was lengthened, reduced, delayed, and advanced by 3 hrs. Following each 3-hr altered condition of sleep there was an equivalent decline in vigilance performance and in subjective arousal as measured by the mood scales. Results support the hypothesis that acute disruption of the 24-hr sleep-wakefulness cycle produces degradations in human performance largely independent of total sleep time. (70 ref)—*Journal abstract*.

8719. **Apkarian-Stielau, Patricia & Loomis, Jack M.** (Pacific Medical Ctr, Smith-Kettlewell Inst of Visual Sciences, San Francisco, CA) **A comparison of tactile and blurred visual form perception.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 362-368.—Conducted 2 experiments with a total of 9 young adults to assess the similarity of tactile form perception and visual form perception under conditions of extreme visual blurring. In Exp I resolution and relative localization tasks were performed under both tactile and blurred visual presentation. Results were the same for the 2 modalities. In Exp II all 26 block letters were presented to each S in 2 distinct methods of presentation, using both tactile and blurred visual displays. In one method, the full-field letter was flashed for 1.0 sec; in the other, a vertical slit scanned the letter from left to right. For all method comparisons, a strong similarity was found between the patterns of correct responses as a function of letter. Also, there was a similarity between the 2 modalities in terms of which letters improved in recognizability in the change from the full-field to the slit mode of presentation. However, the overall superiority of the slit method found for tactile recognition was not obtained visually. Results indicate that recognition with blurred vision is similar to recognition using the intact cutaneous sense, although some differences remain. (23 ref)—*Journal abstract*.

8720. **Bosshardt, H.-G.** (Ruhr-U Bochum, Psychologisches Inst, W Germany) **The influence of visual and auditory images on visual and auditory word identification.** *Psychological Research*, 1975, Vol 38(1), 1-22.—Presents a theory regarding the production of imagery and describes empirical tests conducted to examine its implications. The sensory quality of imagery and its independence from the outer stimulus situation are taken as the prominent and defining characteristics of images. The main hypothesis of the study was that imagery of a certain modality produces attenuation of the lower-level processing units belonging to that modality. This was tested by measuring the influence of visual and auditory images on the identification of words presented visually or acoustically to 18 Ss, with a low signal-to-noise ratio. The hypothesis of modality-specific attenuation was extended by also assuming modality-specific delay of identification. The different susceptibility of the acoustical and the visual identification tasks to the experimental conditions is accounted for by the different decay rates of the visual and auditory registers.—*R. Gunter*.

8721. **Colquhoun, W. Peter.** (MRC Applied Psychology Unit, U Sussex, Brighton, England) **Evaluation of auditory, visual, and dual-mode displays for prolonged sonar monitoring in repeated sessions.** *Human Factors*, 1975(Oct), Vol 17(5), 425-437. Using a task which closely simulated the actual output from a sonar device, the performance of 12 Ss was observed for 115 hrs in repeated prolonged monitoring sessions under auditory, visual, and dual mode display conditions. Despite an underlying basic superiority of signal discriminability on the visual display and the occurrence of long-term practice effects, detection rate was consistently and

substantially higher under the auditory condition, and higher again with the dual-mode display. Results are consistent with the notion that auditory displays have greater attention-gaining capacity in a "vigilance" situation. In an "alerted" situation, where the possible occurrence of a signal was indicated by a warning stimulus in the alternative sensory (auditory or visual) mode, 10 Ss were observed for 57 hrs. Performance was clearly superior with the visual display. Cross-modal correlations of performance indicated the presence of a common factor of signal detectability within Ss. It is concluded that where efficiency both in the initial detection of targets and their subsequent identification and tracking are equally important, the best solution is to retain both auditory and visual displays and to ensure that these are monitored concurrently. (16 ref)—*Journal abstract*.

8722. **Garvill, Jörgen & Molander, Bo.** (U Umea, Sweden) **A note on information processing in cross-modal matching.** *Umea Psychological Reports*, 1975, No 95, 10 p.—Conducted a study with 40 undergraduates to test the hypothesis that differences in accuracy between modality conditions found in earlier experiments were due to differences in rate of information pick-up between the visual and tactual modalities. The modality conditions were visual standard or tactual standard and visual comparison or tactual comparison. Ss made paired comparisons of 3-dimensional "nonsense" objects and were allowed to inspect the stimuli for as long as they wanted. The time was measured for the standard object and the comparison object. It was found that the visual modality had a higher rate of information pick-up than the tactual modality. However, the differences in accuracy between the modality conditions were not eliminated despite the differences in presentation time. Other possible explanations of the differences in accuracy are discussed.—*Journal abstract*.

8723. **Garling, Tommy; Book, Anders & Lindberg, Erik.** (U Umea, Sweden) **Orientation performance in two-segment and three-segment route tasks during blindfolded and sighted walking.** *Umea Psychological Reports*, 1975, No 94, 14 p.—Investigated whether inaccuracy of performance in 2- and 3-segment route (SR) tasks could be accounted for by inaccuracy of perception. 16 undergraduates with and without blindfolds walked along a prescribed path having 90° angles of turns, at 11 points on the path Ss were asked to estimate the distance walked from the preceding point (WD task) and the lengths and angles of turn of earlier sections of the route (2- and 3-SR tasks). Blindfolded Ss systematically underestimated WD, which may have accounted for distance errors in the 2- and 3-SR tasks. Sighted Ss had similar distance errors in the 2- and 3-SR tasks but estimated WD more accurately. When compared to results for verbally presented tasks, results suggest that inaccuracy of distance perception contributed to inaccuracy of performance in the 2- and 3-SR tasks for sighted Ss.—*Journal abstract*.

8726. **Hedge, A. & Marsh, N. W.** (U Sheffield, England) **The effect of irrelevant spatial correspondence on two-choice response-time.** *Acta Psychologica*, 1975(Dec), Vol 39(6), 427-439.—J. R. Simon et al (1969, 1970, 1973) demonstrated a general effect in 2-choice reaction time tasks involving laterally disposed responses, and a succession of stimuli presented unpredictably at either of 2 laterally disposed positions, the stimulus positions being irrelevant in deciding the response. Reaction times are faster for trials in which the spatial loci of stimulus and response correspond than for trials in which they counter-correspond. The present experiment with 40 male students investigated the dependence of this effect upon spatial orientation and upon the logical character of the task. The effect was found not only for laterally disposed pairs of stimulus positions and responses but also for vertical dispositions. The effect was critically dependent upon the logical character of the task, such that it could readily be produced in a reversed form. Results can be well described by considering the logical characters of the recordings of the relevant and irrelevant attributes of stimulus and response. The special status formerly attributed to the processing of spatial information is questioned.—*Journal abstract*.

Two predictions

were confirmed for 12 right-handed college students with normal vision: (a) that there would be no laterality effect for articulatory (jaw) tracking because previous auditory tracking findings were speech related, and (b) that there would be as significant laterality effect (cursor right field-left hemisphere) for right hand tracking because of the development of a specialized sensorimotor integration mechanism for eye-right-hand coordination in the left hemisphere. Alternative explanations for the right-hand tracking results and for the nonsignificant trend toward a laterality effect for left hand tracking are discussed.—*Journal summary*.

8736. **Pittenger, John B. & Shaw, Robert E.** (U Rhode Island) **Aging faces as viscal-elastic events: Implications for a theory of nonrigid shape perception.** *Journal of Experimental Psychology: Human Perception & Performance*, 1975(Nov), Vol 104(1)(4), 374-382.—Proposes a theory for the perception of events using the concepts of transformational and structural invariants. This approach involves the application of a method of spatial coordinate transformations to characterize the remodeling of faces by growth. By construing growing faces to be viscal-elastic events, the perception of the relative age level of faces is made amenable to the proposed event perception analysis. Shear and strain transformations are compared as alternative formulations of growth-produced changes in the shape of human profiles. 3 experiments were conducted with a total of 110 Ss. These studies indicate that profiles transformed by strain elicit more reliable rank-order age judgments than those transformed by shear, although shear had a small significant effect. It is also shown that Ss are highly sensitive to small changes in strain and that perceived identity of a shape is preserved under the strain transformation. The explanatory adequacy of the event perception theory of age information is compared to that of more traditional feature analytic theories.—*Journal abstract*.

8748. Bross, Michael & Zubeck, John P. (Concordia U, Montreal, Canada) Effect of auditory deprivation on visual resolving power. *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 340-347.—Conducted 2 experiments in which changes in the critical flicker fusion (CFF) were determined during and after auditory deprivation (silence). In Exp I, 36 male undergraduates were exposed to 1 wk of auditory deprivation, measurements of the CFF being taken at daily intervals and at Days 1, 2, 3, and 7 after the termination of the experimental condition. Results show that the experimental group exhibited a significant progressive improvement in visual resolving power as a function of auditory deprivation and, following its termination, a gradual decline towards the pre-experimental baseline. On the other hand, 2 control conditions, a group of confined Ss, and a non-confined group showed no systematic changes in the CFF. In Exp II with 6 new Ss, the period of auditory deprivation was extended to 14 days. Results again reveal a progressive improvement on the CFF during the 1st wk of silence followed by an asymptotic performance during the 2nd wk.—*Journal abstract*.

8750. Claxton, Guy L. (U London, Inst of Education, England) Sources of information in word perception. *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 292-301.—Disyllabic words were presented tachistoscopically to a total of 16 undergraduates in 2 experiments, and report of the words was required. In Exp I, word frequency was varied but the frequencies of the constituent syllables were held constant. In Exp II, syllable frequency varied while word frequency remained constant. The prime determinant of perceptual accuracy was word frequency, but an analysis of partial errors showed that some discriminability effects at both the word and the syllable level were present. There was a slight advantage for the 1st syllable over the 2nd within a word. There was no overall improvement with practice, but errors on high frequency words became fewer and on low frequency words correspondingly more frequent. Results suggest that word perception involves extraction and resynthesis of information about components of several different sizes within a word. (French summary) —*Journal abstract*.

(Illinois Coll of Optometry) **Behavioral effects of children's nearpoint lenses.** *Journal of the American Optometric Association*, 1975(Oct), Vol 46(10), 1031-1037.—Reviews the literature on behavioral effects of nearpoint lenses, particularly in children, and notes that research has now demonstrated such effects upon particular types of performance on a short-term basis under experimental conditions with minimal adaptation. Long-term effects remain to be investigated. The studies have suggested a critical lens power for optimal effects, with such a lens power predictable for individuals on the basis of the Monocular Estimate Method dynamic retinoscopy technique. Comparisons of various clinical techniques remain to be studied. It is suggested that the underlying behavioral processes which are modified by lenses, to affect performance changes, may relate to accommodation and magnification. Further research is needed regarding the actual mechanisms of the effects. (58 ref) *Journal summary.*

8760. Growney, Ronald; Weisstein, Naomi & Cox, Sue I. (U Connecticut) **Measurement of metacontrast.** *Journal of the Optical Society of America*, 1975(Nov), Vol 65(11), 1379-1381. Results of a metacontrast experiment, in which the luminance of a comparison stimulus was varied, were quite different from those obtained by T. Flaherty and H. H. Matteson (1971), but highly similar to the masking functions obtained by other methods. It is concluded that variation of comparison-stimulus luminance may be as easy a method to use as variation of test-stimulus luminance and does not involve theoretical difficulties of interpretation.

8761. Hearty, Paul J. & Mewhort, D. J. (Queen's U, Kingston, Canada) **Spatial localization in sequential letter displays.** *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 348-359. Conducted 2 experi-

ments with a total of 26 undergraduates to investigate the ability to locate letters presented successively along a horizontal row. The letters were displayed for 5 msec. and the inter-letter interval varied between 0 and 200 msec. In Exp I, localization decreased as the inter-letter interval was increased to 50 msec. With further increments in inter-letter interval, performance improved. However, there was a correlation between the positions of the letters in space and in time. Exp II indicated that the recovery in spatial localization with inter-letter intervals greater than 50 msec is spurious (i.e., it does not occur if the correlation is minimized). (French summary) —*Journal abstract.*

8767. Lowe, Douglas G. (Trent U, Peterborough, Canada) **Processing of information about location in brief visual displays.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 309-316. Within the context of the selective masking effect, as advanced by P. M. Merikle et al (1971), a series of 5 experiments employing a total of 46 undergraduates investigated the utility of bar-marker probes as a poststimulus sampling procedure for partial report of brief visual displays. It was demonstrated that bar markers are inadequate as partial-report cues because Ss cannot properly locate the positions of the probes. An improved bar-marker procedure was developed which removed this problem of cue localization. Furthermore, it was shown that Ss, when given the opportunity, were able to report much more from brief visual displays than the bar-marker

procedure typically permits. It is suggested that Ss' ability to employ bar-marker probes is governed by quite different factors than their capacity to report the contents of brief visual displays.—*Journal abstract.*

8771. Pomerantz, James R. & Schweitzer, Steven D. (Johns Hopkins U) **Grouping by proximity: Selective attention measures.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 355-361.—Conducted 2 experiments with a total of 22 young adults to examine the role of element proximity in perceptual grouping in tasks requiring speeded discrimination of 2-element visual patterns. Grouping of 2 elements was defined as the failure of attention to be focused on 1 element selectively in filtering tasks where only that element was relevant to the discrimination. Failure of selective attention was measured by the interference caused by variation of the irrelevant element. Grouping diminished monotonically as the spacing between 2 elements was increased. Grouping could be reduced or eliminated by the introduction of a 3rd element into the stimulus field, presumably because this addition triggered a reorganization of the perceptual field into a new grouping structure. Grouping appeared to facilitate performance on condensation tasks requiring distributed attention, to the degree that the condensation tasks were easier than the filtering tasks at close proximities. Paradoxically, for some tasks, moving an irrelevant element away from a relevant one impaired performance, suggesting that paying attention to irrelevant information could be beneficial. It is suggested that grouping be conceptualized not as an automatic process under preattentive control but as an optional process under strategic control.—*Journal abstract.*

8780. Tartaglione, Antonio; Goff, David P. & Benton, Arthur L. (U Iowa, Neurosensory Ctr) **Reaction time to square-wave gratings as a function of spatial frequency, complexity and contrast.** *Brain Research*, 1975, Vol 100(1), 111-120.—Measured visuomotor reaction time (RT) of 13 normal right-handed undergraduates to briefly presented square-wave bar patterns. The pattern varied with respect to magnitude and number of spatial frequencies (1 cycle/degree of visual angle, 3 cycles/degree, and both combined) with each spatial frequency stimulus presented at 3 levels of contrast. Space-average luminance was held constant. RT increased with the higher spatial frequency and was intermediate in value for the combination stimulus at each level of contrast. RT increased with decreasing contrast levels for each spatial frequency stimulus. There was no interaction between the 2 parameters. Findings indicate that a behavioral response measure can be employed to study the multiple channel hypothesis of human vision. (15 ref) *Journal abstract.*

8788. Deutsch, Diana & Roll, Philip L. (U California, San Diego) **Separate "what" and "where" decision mechanisms in processing a dichotic tonal sequence.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 23-29. 44 right-handed undergraduates were presented with a dichotic tonal sequence which consisted of 3 800-Hz tones followed by 2 400-Hz tones on one channel and simultaneously 3 400-Hz tones followed by 2 800-Hz tones on the other. All tones were 250 msec in duration and separated by 250-msec pauses. On any given stimulus presentation, most Ss reported the sequence of pitches delivered to one ear and ignored the other. They further tended significantly to report the sequence delivered to the right ear rather than to the left. However, each tone appeared to be localized in the ear receiving the higher frequency, regardless of which ear

was followed for pitch and regardless of whether the higher or lower frequency was in fact perceived. (27 ref) —*Journal abstract*.

(Leningrad Zhdanov State U, USSR) **[Human capacity for absolute judgment of short sound durations.]** (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 321-327. Studied the identification of auditory images by human Ss. Results corroborated the theory of the persistence of auditory sensation. Ss could not estimate the duration of a sound lasting only 130-170 msec.—*L. V. Majovski*.

8791. Hallsten, Lennart. (U Stockholm, Inst of Applied Psychology, Sweden) **Interval estimates by means of a magnitude production technique for loudness and area.** *Report from the Institute of Applied Psychology, U Stockholm*, 1975, No 59, 13 p. 10 paid students gave point and interval estimates of perceived loudness and circle area, respectively, by means of magnitude productions. Each stimulus called for 3 different estimates: one corresponding to the lowest value conceivable as appropriate to the subjective magnitude of the stimulus, another representing the highest possible value, and the 3rd corresponding to "the most reasonable" value. The order in which the S was requested to give these estimates was varied. It was found that the ratios between the lowest and the highest estimates increased with the stimuli and that the overall ratio level was higher for area than for loudness. The interval estimates had an equivocal relationship to ratings of perceived difficulty. In many instances the Ss gave productions which were inconsistent with the order information in the multiple estimates, probably due to a contrast effect and/or too high a mental load. Multiple responses are concluded to offer further possibilities for evaluating scaling behavior, in terms of validity and consistency, in psychophysical experiments.—*Journal abstract*.

8794. Miyawaki, Kuniko et al. (U Tokyo, Japan) **An effect of linguistic experience: The discrimination of [r] and [l] by native speakers of Japanese and English.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 331-340.—Tested 21 Japanese and 39 American adults on discrimination of a set of synthetic speech-like stimuli. The 13 stimuli in this set varied in the initial stationary frequency of the 3rd formant (F3) and its subsequent transition into the vowel over a range sufficient to produce the perception of [ra] and [la] for American Ss and to produce [ra] (which is not in phonemic contrast to [la]) for Japanese Ss. Discrimina-

tion tests of a comparable set of stimuli consisting of the isolated F3 components provided a "nonspeech" control. For Americans, the discrimination of the speech stimuli was nearly categorical (e.g., comparison pairs identified as different phonemes were discriminated with high accuracy, while pairs identified as the same phoneme were discriminated relatively poorly). In comparison, discrimination of speech stimuli by Japanese Ss was only slightly better than chance for all comparison pairs. Highly accurate performance on nonspeech stimuli, however, was virtually identical for Japanese and American Ss. Results suggest that the effect of linguistic experience is specific to perception in the speech mode. (18 ref)—*Journal abstract*.

8797. Stevens, Kenneth N. & Blumstein, Sheila E. (Massachusetts Inst of Technology) **Quantal aspects of consonant production and perception: A study of retroflex stop consonants.** *Journal of Phonetics*, 1975(Oct), Vol 3(4), 215-233.—Explored the acoustic properties and perceptual characteristics of retroflex stop consonants to determine (a) if there is an area of acoustic stability which defines the articulatory dimension "retroflexion" and (b) if the range of acoustic characteristics spanning dental to retroflex to velar consonants can be described in terms of discrete properties that are perceived categorically. Acoustic properties were determined and interpreted in terms of acoustic theory. The effectiveness of acoustic attributes as cues for identification of retroflex stop consonants was tested by generating consonant-vowel syllables on a terminal analog speech synthesizer. The bursts and formant transitions of the syllables were systematically altered to encompass a range of sounds that included dental, retroflex, and velar consonants. The stimuli were presented for identification to 8 Hindi-speaking Ss. Three discrete acoustic ranges of stimuli were identified; these are considered in relation to quantal theory, auditory property detectors, and theoretical notions of markedness. (28 ref) *Journal abstract*.

8798. Umeda, Noriko; Harris, Marion & Forrest, Karen. (Bell Lab, Murray Hill, NJ) **The placement of auditory boundaries in fluent speech.** *Journal of Phonetics*, 1975(Oct), Vol 3(4), 191-196.—Notes that boundaries in running speech carry information to the listener about the syntactic and semantic structure of the message. However, not all boundary signals are equally obvious acoustically, and every speaker has his own way of manipulating acoustic parameters to form boundary signals. Listeners often respond to a very obscure acoustic feature as a boundary signal. Among the eventual goal of defining the boundary acoustically and establishing its relevance to the higher level structure of the message, the present study examined the present of auditory boundaries. The reliability among 4 listeners, the agreement among 4 speakers (1 professional and 3

amateur) as judged by the listeners, and the placement of boundaries with respect to the syntactic structure of the sentence are reported.—*Journal abstract*.

(Parsons State Hosp & Training Ctr, Research Ctr, KS) **The "preference procedure" as an instrument for speech reception assessment and training.** *Acta Symbolica*, 1974, Vol 5(4), 83-100.—Suggests a new procedure for assessing and training receptive speech skills. Its reported advantage over more traditional procedures are analyzed, and methodological issues in the study of receptive skills are discussed. Possible applications of this procedure in test construction and administration and in research on receptive skills are discussed.—*Journal abstract*.

8800. Wingfield, Arthur & Wheale, John L. (Brandeis U) **Word rate and intelligibility of alternated speech.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 317-320.—A continuous speech message alternated between the left and right ears retains generally good intelligibility, except at certain critical rates of alternation of about 3-4 switching cycles/sec. In the present experiment, 16 undergraduates heard speech alternated between the 2 ears at 8 different switching frequencies and at 4 different speech rates. Results support an earlier contention that the critical intelligibility parameter in alternated speech is average speech content per ear segment, rather than absolute time per ear. Implications are discussed both in terms of critical speech segments in auditory analysis and in neural processing of binaural auditory information. (30 ref)—*Journal abstract*.

Cognitive Processes

8801. Aaronson, Doris & Scarborough, Hollis S. (New York U) **Performance theories for sentence coding: Some quantitative evidence.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 56-70.—A study with 48 undergraduates showed that patterns of word-by-word reading times differ for Ss who must later recall a sentence and Ss who must simply comprehend it. The data suggest that these 2 retrieval tasks induce different perceptual coding strategies. The recall Ss had slower reading times and smaller practice effects than the comprehension Ss. Their reading times reflected the syntactic structure of the sentence, with prolonged pauses at phrase boundaries and bowed reading time curves within phrases. Data for comprehension Ss, on the other hand, reflect the semantic content. Prolonged reading times occurred at important content words, reading times decreased as contextual redundancy increased, and more coding time was used at the ends of causal than noncausal sentences. It is concluded that the performance data are determined by both the linguistic structure of the stimulus and the cognitive demands of the task. (21 ref) *Journal abstract*.

8802. Aaronson, Doris. (New York U) **Performance theories for sentence coding: Some qualitative observations.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 71-85.—Further evidence for the reading strategies used by Ss in sentence recall and comprehension is presented. Ss read sentences and recalled them, or read them and comprehended them. The reading times were recorded for each word in the sentence. The results show that the reading times for recall Ss were more sensitive to the syntactic structure of the sentence than the reading times for comprehension Ss. The results also show that the reading times for comprehension Ss were more sensitive to the semantic content of the sentence than the reading times for recall Ss. The results suggest that the reading times for recall Ss are determined by the syntactic structure of the sentence, while the reading times for comprehension Ss are determined by the semantic content of the sentence.

sion demands, and emphasis on these different properties induces different coding strategies. The task demands systematically affect the S's coding procedure or algorithm and also the resultant linguistic representation of the stimulus. In particular, the memory and comprehension demands influence the direction of coding, the structural units involved, and the time course of coding over the sentence. These task demands also influence the linguistic level, the amount, and the classes of stimulus information that are preserved by the S. (1½ p ref)

(MRC Applied Psychology Unit, Cambridge, England) Cognitive efficiency of divers working in cold water. *Human Factors*, 1975(Oct), Vol 17(5), 446-454.—Studied the cognitive efficiency of 14 divers during a 1-hr exposure to water of 40°F and 78°F. Reasoning ability was tested using a sentence comprehension task presented at the beginning and end of each test session. Vigilance was tested by requiring Ss to detect the onset of a faint peripheral light during the performance of a 2-man pipe assembly task. Memory was tested by requiring Ss to learn a number of "facts" during the dive, with retention tested by recall and recognition on land, after a 40-min delay. Despite a mean drop in rectal temperature of 1.3°F, neither reasoning nor vigilance was impaired. Memory performance did deteriorate, though it is suggested that this may reflect a peripheral context-dependent memory effect. It is concluded that a well-motivated S may be cognitively unimpaired despite a marked drop in deep body temperature.—*Journal abstract.*

8807. Bamber, Donald; Herder, Joseph & Tidd, Kate. (VA Hosp. Research Service, St Cloud, MN) Reaction times in a task analogous to "same"-"different" judgment. *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 321-327. 5 young adults responded "yes" if 2 16(8)-length strings of letters contained a common letter in a common position, otherwise they responded "no." Thus, the task was to judge whether all or not all of the letters in 1 string differed from the letter occupying the corresponding position in the other string. Conversely, in "same"-"different" judgment, the task is to judge whether all or not all of the letters in 1 string match the corresponding letter in the other string. Thus, common-

letter judgment and "same"-"different" judgments are symmetrically related, with "no" analogous to "same" and "yes" analogous to "different." The response "same" is often faster than the response "different." However, in the common-letter task, "no" was slower than "yes." More specifically, both the "yes" and "no" reaction times were consistent with a serial self-terminating search. This is precisely what would be expected from D. Bamber's (see PA, Vol 44:1693) 2-process model. (29 ref)—*Journal abstract.*

8821. **Hamill, Bruce W.** (Johns Hopkins U) **A linguistic correlate of sentential rhythmic patterns.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 71-79.—Examined 2 hypotheses concerning the notion that the rhythmic schema of an utterance contains information which delimits its syntactic form: (a) a pattern difficulty hypothesis that temporal patterns differ in their ease of processing and (b) a word distribution hypothesis that high-information (content) words occupy longer duration positions in temporal patterns than do low-information (function) words. Patterns consisted of combinations of 100- and 500-msec 1,000-Hz tones. In Exp I 10 male undergraduates constructed utterances of monosyllabic words to fit patterns. The word distribution hypothesis held more strongly for easy patterns than for difficult patterns, although the word distribution effect was strong across the entire set. In Exp II 10 new male undergraduates selected the best fitting multiple-choice alternative for each pattern. The word distribution hypothesis held very strongly across all patterns, having no interaction with pattern difficulty. The possibility that words were assigned to tones on the basis of vowel length was not substantiated. Results support an information processing model of speech production.—*Journal abstract.*

Durations of speech and silence in a secondary verbal task were examined, using 20 Form 6 girls. Results that the the processing load even of practiced speech is sufficient to limit the parallel processing of a cognitive task forcing serial processing during the silent gaps in speech.—*Journal abstract.*

8824. **Jackson, Mark D. & McClelland, James L.** (U California, San Diego) **Sensory and cognitive determinants of reading speed.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 565-574.—Six fast readers and 6 average readers (undergraduate and graduate students) were tested on 4 tasks. Neither peripheral letter identification nor susceptibility of foveal letter identification to patterned masking differed be-

tween the 2 groups. However, fast readers picked up more information per fixation on structured textual material, as indexed by a forced-choice test. The average fast reader had a greater span of apprehension for unrelated elements. It appears that faster readers are able to encode more of the contents of each fixation, whether or not higher order linguistic structure is present. Results are inconsistent with the view that reading speed is dependent solely on the reader's ability to infer or fill in missing information. (22 ref)—*Journal abstract.*

8831. **Levi, Isaac.** (Columbia U) **Newcomb's many problems.** *Theory & Decision*, 1975(May), Vol 6(2), 161-175.—Cites W. Newcomb's paradox which rests on 2 arguments, one appealing to the principle of maximizing expected utility and one appealing to dominance in order to generate conflicting recommendations in certain kinds of choice situations. In the present paper, it is argued that applications of the principle of maximizing expected utility and of the dominance principle are fallacious and that the specification of the decision problem is too indeterminate to render a verdict between

the 2 options considered. It is shown that if R. Nozick's (1969) case for invoking the dominance principle is taken seriously, it leads to contradictions.—*Journal abstract.*

8832. **Ley, Ronald & Tesiny, Edward.** (State U New York, Albany) **Associative reaction time, meaningfulness, and pronunciability ratings of 382 words and paralogues.** *Bulletin of the Psychonomic Society*, 1975(Dec), Vol 6(6), 645-648.—Assessed 75 consonant-vowel-consonant-vowel-consonant (CVCVC) words and paralogues for associative reaction time, meaningfulness (a', rated association frequency), and pronunciability. Ss were 104 undergraduates. Uncorrected split-half reliability coefficients of correlation were, respectively, .97, .89, and .90. Intercorrelations were consistent with those of a list of 319 CVCVCs previously assessed for associative reaction time, meaningfulness (a'), and pronunciability. 63 of the 75 CVCVCs were added to the list of 319. Intercorrelations among the assessment variables for the combined list of 382 CVCVCs were highly consistent with the intercorrelations based on the list of 319. This larger alphabetically ordered single list of 382 CVCVC words and paralogues containing all 3 assessment values will facilitate selection of units for purposes of research.—*Journal abstract.*

8833. **Liu, In-Mao & Shieh, Pei-Ching.** (National Taiwan U, Taipei) **[An experimental test of strategy-selection theory in attribute identification.]** (Japn) *Acta Psychologica Taiwanica*, 1975, Vol 17, 63-68.—Conducted 2 experiments in which a total of 24 college students were given the attribute-identification task of unidimensional and conjunctive concepts under a condition in which a list of attributes instead of an array of stimulus patterns was available. Ss tested their strategies by selecting 1 attribute (unidimensional concepts) or 2 attributes (conjunctive concepts) at a time. Since a correct strategy was chosen by the E in advance, an appropriate feedback could be given depending on Ss' selecting a correct, a wrong, or an irrelevant strategy as specified by the strategy-selection theory. In comparison with a control condition in which an array of stimulus patterns was shown, Ss took a greater number of trials to reach the criterion. It is concluded that Ss seemed to process information quite efficiently by comparing the stimuli selected on the successive trials to arrive at the correct strategy in the usual condition of attribute identification. This means that the selection probabilities of a correct, a wrong, or an irrelevant strategy may change suddenly in the course of the task.—*Journal abstract.*

8835. **Marschak, Jacob et al.** (U California, Los Angeles) **Personal probabilities of probabilities.** *Theory & Decision*, 1975(May), Vol 6(2), 121-153.—By definition, the subjective probability distribution of a random event is revealed by the S's choice between bets—a view expressed by F. Ramsey, B. De Finetti, L. J. Savage, and traceable to E. Borel and, it can be argued, to T. Bayes. Since hypotheses are not observable events, no bet can be made, and paid off, on an hypothesis. The subjective probability distribution of hypotheses (or of a parameter,

as in the current Bayesian statistical literature) is therefore a figure of speech, an "as if," justifiable in the limit. Given a long sequence of previous observations, the subjective posterior probabilities of events still to be observed are derived by using a mathematical expression that would approximate the subjective probability distribution of hypotheses, if these could be bet on. This position was taken by most, but not all, respondents to a Round Robin initiated by the author after M. H. DeGroot's talk on Stopping Rules presented at the Interdisciplinary Colloquium on Mathematics in Behavioral Sciences. Other participants are K. Borch, H. Chernoff, R. Dorfman, W. Edwards, T. S. 8840. **Potts, George R. & Scholz, Karl W.** (Dartmouth Coll) **The internal representation of a three-term series problem.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 439-452.—Traditionally, researchers interested in examining the psychological processes involved in solving a 3-term series problem have presented the 2 premises (e.g., Tom is worse than Dick, Dick is worse than Sam) and the question ("Who is best?" or "Who is worst?") simultaneously. Overall solution time was measured. The present 3 experiments with a total of 104 undergraduates were designed to obtain separate estimates of the time required to encode the premises and the time required to generate an answer from the resulting internal representation. Ss were given the premises to study prior to being asked the question. Both premise study time and question reaction time were measured. Under these circumstances it appears that marked and unmarked adjectives were stored in the same form and that Ss integrated the 2 premises into a unified

representation rather than simply storing the functional relations underlying each of the 2 premises. (25 ref) —*Journal abstract.*

8841. Rips, Lance J. (U Chicago) **Inductive judgments about natural categories.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 665-681.—Examined the effects of semantic structure on simple inductive judgments about category members in 3 experiments with a total of 404 undergraduates. For a particular category (e.g., *mammals*), Ss were told that one of the species (e.g., *horses*) had a given property (an unknown disease) and were asked to estimate the proportion of instances in the other species that possessed the property. Results indicate that category structure—in particular, the typicality of the species—influenced Ss' judgments. Results are interpreted by models based on the assumption that when little is known about the underlying distribution of a property, Ss assume that the distribution mirrors that of better-known properties. For this reason, if Ss learn that an unknown property is possessed by a typical species (i.e., one that shares many of its properties with other category members), they are more likely to generalize than if the same fact had been learned about an atypical species. 8847. Shapira, Zur. (U Rochester) **Measuring subjective probabilities by the magnitude production method.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 314-320.—Used the magnitude

production method to determine how subjective probability estimates are formulated. 40 paid male undergraduates assessed the subjective probabilities of different uncertain events by providing 2 responses: a verbal numerical estimate and a corresponding exerted force on a handgrip. The Ss' responses were related by an ogival function. This function differed significantly from a power function that is frequently found in magnitude production studies and that was also obtained for the control group in the present study. Further implications of the ways people estimate subjective probabilities and the possible utilization of psychophysical methods for the study of subjective probability are discussed.—*Journal abstract.*

8848. Shaver, Phillip; Pierson, Lee & Lang, Stephen. (New York U) **Converging evidence for the functional significance of imagery in problem solving.** *Cognition: International Journal of Cognitive Psychology*, 1974-75, Vol 3(4), 359-375.—Two kinds of explanations have been offered for the process by which 3-term series problems are solved, one in terms of linguistic principles and the other in terms of visual-spatial imagery. Two experiments ($N = 80$ university students) are reported in which 3 different classes of operations were examined: (a) Manipulation of stimulus attributes (characteristics of problems), (b) manipulation of variables that selectively encourage or inhibit the use of imagery (facilitating instructions and the suppression of visualization by reading), and (c) measurement of relevant individual differences (spatial-reasoning ability). Results indicate that imagery plays a functional but not a necessary role in the solution of 3-term series problems. It is suggested that imaginal representation is functional because it reduces the load on memory. An adequacy explanation of problem solving will have to address certain general issues, such as the diversity of forms of cognitive representation and differences within and between individuals in the choice of problem-solving strategies (French summary) (31 ref)—*Journal abstract.*

8856. **Wagner, Ingeborg & Cimolli, Elmar.** (Ruhr U Bochum, Psychologisches Inst, W Germany) [Hypothesis testing by impulsive and reflective children: Problem-solving strategies as shown by eye movements.] (Germ) *Zeitschrift für Entwicklungspsychologie und Pädagogische Psychologie*, 1975, Vol 7(1), 1-15.—Filmed eye movements as Ss responded to the Matching Familiar Figures Test, to explore the process of hypothesis testing in 40 cognitively impulsive and 40 reflective 8-10 yr olds. The test requires Ss to identify a standard out of a display with 5 variants. Results revealed that visual search behavior of reflective and impulsive Ss differed even in the 1st 4 sec, with reflectives more conformity-oriented. They systematically compared variants either with the standard or with the other variants. They checked all variants and finally concentrated on the correct one, which they rechecked with the standard several times before responding. Impulsives failed to employ standard systematic search strategies, preferring variants which were in a middle or a right-hand part of the display. Findings are discussed in the context of cognitive control of visual search behavior. (27 ref) —*English summary.*

8857. **Zagorski, Michael A.** (Memorial U, Newfoundland, Canada) **Risky decision: Attention effects or masking effects?** *Acta Psychologica*, 1975(Dec), Vol 39(6), 487-494.—The bid procedure of J. Marshak (1950) shows that more money is required to induce an S to exchange gamble *a* for gamble *e* and then *e* for *b* if *e* differs from *a* only in the winning amount and differs from *b* only in the probability of winning, rather than if *e* differs from *a* only in the probability of winning. This is contrary to most theories of risky decision-making which imply that the amount of money necessary to effect a 2-step exchange between *a* and *b* should be independent of the intermediary gamble. One might attempt to explain the effect by saying that the S attends to the dimension which is different between gambles. But the explanation is untenable if one assumes that states of attention are defined as weightings of the dimensions. An alternative explanation is put forward which basically assumes that winning amounts mask differences in probability of winning, more than vice versa. An experiment was conducted with 18 Ss from a university pool. The formalization of the theory is given in terms of Fechnerian integration over imperfect differentials. (15 ref)—*Journal abstract.*

8859. **Aarons, Louis.** (Illinois Dept of Mental Health & Developmental Disabilities, Chicago) **Sleep-assisted instruction.** *Psychological Bulletin*, 1976(Jan), Vol 83(1), 1-40.—The question of learning from materials presented during sleep has been answered positively by Soviet studies and negatively by Western studies. However,

procedural differences among studies have been confounded with the absence of an established criterion for sleep. The present paper reviews 11 studies in sleep learning for the potential practical value of sleep-assisted instruction (SAI). A strategy of optimizing compatibility between learning and sleep variables to support SAI is proposed within the context of both wake and sleep research on attention, perception, and memory. Age, sex, health, wake learning capacity, and suggestibility are important moderating variables in SAI. The individual's motivation and set, meaningful-relevant learning material, activation of low-voltage EEG sleep patterns and coordinated wake learning with extended training are tentatively deduced as necessary conditions in applied SAI. 8862. **Baddeley, Alan D.; Thomson, Neil & Buchanan, Mary.** (MRC Applied Psychology Unit, Cambridge, England) **Word length and the structure of short-term memory.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 575-589.—Conducted 8 experiments with a total of 76 Ss (undergraduates, graduate students, and members of an applied psychology subject panel) to test the hypothesis that immediate memory span is not constant, but varies with the length of the words to be recalled. Results show that (a) memory span is inversely related to word length across a wide range of materials; (b) when number of syllables and number of phonemes are held constant, words of short temporal duration are better recalled than words of long duration; (c) span could be predicted on the basis of the number of words which the S can read in approximately 2 sec; and (d) when articulation is suppressed by requiring the S to articulate an irrelevant sound, the word length effect disappears with visual presentation, but remains when presentation is auditory. Results are interpreted in terms of a phonemically-based store of limited temporal capacity, which may function as an output buffer for speech production and as a supplement to a more central working memory system. 8863. **Baggett, Patricia.** (U Colorado) **Memory for explicit and implicit information in picture stories.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 538-548.—The nature of the memory representation of 2 types of information in picture stories was examined: surface information, arising directly from pictures which occur in the stories, and conceptual information, easily inferable when integrating the pictures into a connected story, but arising potentially also from pictures not in the stories. 3 experiments were conducted with a total of 75 undergraduates. Differences in accessibility to these representations were inferred from reaction time differences. Results indicate that while viewing, the observer made inferences necessary to

form a coherent story, that he rejected improbable pictures, that for at least 3 days he could separate pictures whose meaning fit the story but which he had not seen from pictures he actually saw, and that he answered written questions about the story's meaning from a conceptual rather than a surface memory representation.—*Journal abstract.*

8864. Bahrck, Harry P. & Gharrity, Katherine. Interaction among pictorial components in the recall of picture captions. *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 103-111.—In a study with 108 undergraduates, single-word captions were presented with each of 30 composite pictures consisting of background and human figure components. The purpose was to infer interactions among the encoding processes which link the picture components to the captions. This was done by testing the components of the pictures as retrieval cues for the captions. Captions were selected so that they became equally strongly associated with the 2 components or so that the association to one of the components was stronger than the other. Both figure and background components were effective retrieval cues for captions, but the entire picture was less effective as a retrieval cue than would be expected on the basis of independent contributions of the components. This was especially true for captions which were more strongly associated with either the figure or the background component. The more weakly encoded component was an effective retrieval cue only in those instances in which the stronger component was also effective. Data are accounted for by a mediation interpretation.—*Journal abstract.*

Nothing but rehearsing some items more or recalling them sooner? *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 549-563.—Conducted 4 experiments with a total of 132 undergraduates to investigate the hypothesis that free-recall curves reflecting the effects of serial position, presentation time, and delay of recall are attributable to Ss' pattern of rehearsal. In Exp I unrestricted overt rehearsal during list learning revealed that a list item's rehearsal time and item retention interval (the interval between an item's last rehearsal and the signal to begin recall) produced a multiple correlation of .86 with probability of recall. In Exp II Ss' spontaneous pattern of rehearsal was disrupted with instructions to either rehearse items equally, or to selectively rehearse beginning, middle, or terminal items. Although free-recall curves were grossly altered, the multiple correlation remained high (.89). Exps III and IV showed that better-than-predicted recall of beginning items in certain conditions in the 1st 2 experiments was largely attributable to Ss' overt rehearsal underestimating concurrent covert rehearsal of beginning items. (Gateways Hosp., Andrew Norman Research Ctr, Los Angeles, CA) **The role of awareness in human differential autonomic classical conditioning: The necessary-gate hypothesis.** *Psychophysiology*, 1976(Jan), Vol 13(1), 50-53.—Proposes a "necessary-gate" hypothesis regarding the relationship between awareness of the CS-UCS relationship and autonomic classical conditioning. The hypothesis holds that awareness is a necessary but not sufficient condition, and a gate but not analog condition, for human differential autonomic classical conditioning. Evidence in support of the hypothesis is reviewed, and directions for future research and theory development are suggested. (20 ref)—*Journal abstract*.

8878. Dillon, Richard F. & Bittner, Leslie A. (Carleton U, Ottawa, Canada) **Analysis of retrieval cues and release from proactive inhibition.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 616-622.—144 undergraduates, divided into 6 groups, received 4 Brown-Peterson trials with recall triads from a common encoding category (e.g. cities). Items on the 1st 3 trials were from a common subset (e.g., eastern Canadian cities). On Trial 4, the subset was either shifted or not. No subset cue, or a subset cue at presentation or at recall, was provided to different groups on Trial 4. A subset shift resulted in improved recall, and a subset cue enhanced performance whether there was a shift or not. Results indicate that the cue influenced response generation, not response selection, and that there is no evidence that subset information was encoded when items were presented.—*Journal abstract*.

8879. Dillon, Richard F. & Thomas, Heather. (Carleton U, Ottawa, Canada) **The role of response confusion in proactive interference.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 603-615.—In 2 experiments, with a total of 120 undergraduates, using the Brown-Peterson memory paradigm, various instructions to guess had small effects on recall, but sizable effects on the incidence of prior list intrusions. Subjective confidence ratings indicated that prior list intrusions were generally known to be incorrect. In Exp III, 24 Ss, who were required to recall items from the present and immediately preceding trial on each of 16 trials, recalled present trial items at the same level as Ss under normal conditions. Correlation analyses, intrusion analyses, and confidence rating analyses indicated no relation between recall of present and previous trial items. Results indicate that proactive interference is primarily the result of inability to generate correct items, rather than confusion between present and previous items. (24 ref)—*Journal abstract*.

8880. Donnell, Michael L. & du Charme, Wesley M. (Rice U) **The effect of Bayesian feedback on learning in an odds estimation task.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 305-313. —Provided 24 paid male undergraduates with 60 feedback trials in an odds revision task using normal

distribution data generators. Learning and transfer were tested by comparing pre- and posttraining odds estimates for data generators differing in diagnosticity (higher and lower) and kind (binomial) from those used in training. Ss showed rapid learning and a moderate amount of transfer. What Ss seemed to do after training was to increase their initially too small odds by some factor related to the perceived diagnosticity of the data generators. The fact that transfer of training is so closely tied to the actual stimuli used during feedback poses problems for training operators of real world diagnostic systems.—*Journal abstract*.

8881. du Boucheron, Geneviève B. (U Poitiers, Lab de Psychologie, France) **Learning of lists of properties related to familiar objects.** *Acta Psychologica*, 1975(Dec), Vol 39(6), 411-416.—4 groups of 10th graders simultaneously learned 6-word lists that indicated common objects' properties. Words of each list either all corresponded to the same object (highest homogeneity level) or, inversely, corresponded to 6 different objects (highest heterogeneity level), with 2 intermediate situations in between. Results indicate that the homogeneity of lists had a main effect upon learning. It is hypothesized that the object corresponding to the words of a list is used, when it is detected, as a federator for these words, and thus facilitates their recall. It is concluded there is a certain similarity between word lists corresponding to several properties of an object and taxonomic lists.—*Journal abstract*.

8885. Evans, James D.; Good, Susan M.; Lintzenich, Patricia & Francis, Nanette C. (Lindenwood Coll) **Level of processing, type of processing, and the repetition effect in free recall.** *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 327-339.—Conducted 2 experiments, involving 45 high school and 60 college students, on the possibility that the effect of repetition on the long-term retention of common nouns depends upon the form of study being used. In Exp I, 3 levels of processing were combined factorially with 3 degrees of repetition in an incidental-learning task. Results indicate that semantic processing yields a larger repetition effect than "minimal" structural processing. Exp II, which entailed the factorial crossing of level of processing with type of processing, also showed that level of processing interacts with repetition to determine long-term retention. Type of processing, however, failed to have any effect. (French summary)—*Journal abstract*.

8886. Eysenck, Michael W. (U London, Birkbeck Coll, England) **Extraversion, verbal learning, and memory.** *Psychological Bulletin*, 1976(Jan), Vol 83(1), 75-90.—Reviews the literature relating extraversion and

human learning and memory. There appear to be several replicable differences in learning and memory between introverts and extraverts. Current theorizing emphasizes the concept of arousal and indicates that most of the obtained results are consistent with the notion that introverts are more chronically aroused than extraverts. While this approach appears to be a valuable one, several difficulties with such theorizing are noted. A major inadequacy in the work in this area is seen as the relative failure to use current advances in our understanding of the processes of storage and retrieval in the design of experiments and the subsequent interpretation of the results. (Stanford U) **Alternative conceptions of semantic theory.** *Cognition: International Journal of Cognitive Psychology*, 1974-75, Vol 3(4), 313-339.—Argues that theories of semantic memory have diverged in a manner that parallels current linguistic controversy concerning the representation of meaning. The feature-comparison model of E. E. Smith, E. J. Shoben, and L. J. Rips (see PA, Vol 52:09188) applies the linguistic theory of G. Lakoff (1972) to predict people's reaction times to verify sentences, while the marker-search model, described here, used the type of semantic representation outlined by J. J. Katz (1972) to explain a similar range of data. The 2 models are described, and the evidence for each is reviewed. Available evidence supports the marker-search model, but disconfirms a major prediction of the feature-comparison model. It is argued the feature-comparison model is in principle inadequate as a model of semantic representation, unless its conception of semantic components is substantially altered. (Rockefeller U, New York, NY) **Coding of temporal-spatial patterns in short-term memory.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 480-495.—In 4 experiments with a total of 96 paid young adults, short-term retention of temporal and spatial order information were compared using the distractor paradigm. Whereas Ss employed phonemic coding when they recalled the temporal order of letters, they coded information about temporal-spatial patterns for spatial order recall. When phonemic coding was eliminated by forcing the Ss to pronounce irrelevant

items during the presentation of the letter string. Ss employed the pattern strategy even in temporal order recall. Distractor tasks involving digit shadowing were effective at disrupting temporal order recall but caused little disruption of spatial order recall. However, distractor tasks involving the processing of spatial order information did interfere with spatial order recall. (19 ref)—*Journal abstract*.

8906. Humphreys, Michael S. (Northwestern U) **The derivation of endpoint and distance effects in linear orderings from frequency information.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 496-505.—Both endpoint and distance effects have been observed in the protocols of Ss learning linear orderings. It is suggested that these could be produced by Ss learning the frequency with which words occur as the greater member of a pair or relationship. In 2 experiments with a total of 126 undergraduates, it was found that when Ss learned verbal discrimination lists constructed from a 5-term linear ordering, both effects were obtained. The pattern of errors appeared to be essentially the same on Trial 1 as it was on all trials, and did not differ as a function of whether or not the Ss were informed about the linear ordering. Furthermore, the end of the order, which was most difficult, varied in accordance with frequency predictions. A modification of the original frequency analysis was made to include the learning of the frequency with which words occur as the lesser member of a pair or relationship.—*Journal abstract*.

8907. Jastrzembski, James E. & Stanners, Robert F. (Oklahoma State U) **Multiple word meanings and lexical search speed.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 534-537.—Performed 2 experiments with a total of 60 undergraduates to investigate whether the recognition of words requires an individual to use information about the words stored in long-term lexical memory. Ss were required to make a word-nonword decision to a visually presented item. The dependent measure was decision latency. The items were words with either a high or a low number of meanings and lawful nonwords. Results indicate that words with a high number of meanings produced reliably shorter decision times. The interpretation of the results is that words with multiple meanings have multiple memory entries, and the search process terminates with detection of 1 of the entries.—*Journal abstract*.

—Studied 18 undergraduates highly susceptible to hypnosis and 18 refractory to hypnosis in a verbal conditioning task modeled after the one used by C. Taffel (see PA, Vol 31:2490). Results indicate that the highly susceptible group showed significantly greater conditioning than the low group. Awareness of the reinforcement contingency by S was not related to the learning task nor to hypnotic susceptibility. A measure of S's attitude toward the reinforcement cue during learning showed that the highly susceptible group had a more positive set toward the cue, whereas the low group tended to respond to it in a neutral or negative manner. Results are interpreted in terms of the theoretical nature of hypnotic susceptibility. (German, French & Spanish summaries) (15 ref)—*Journal abstract*.

8911. Laughlin, Patrick R. & Wong-McCarthy, William J. (U Illinois) **Social inhibition as a function of observation and recording of performance.** *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 560-571.—256 college students solved 3 concept-attainment problems in an orthogonal design. The variables were (a) number of observers (an additional observer or the E alone); (b) videorecording (yes or no); (c) audiorecording (yes or no); and (d) task complexity (4, 6, 8, or 10 total attributes in the problems). Each videotaping, filming, and audiotaping condition resulted in poorer performance than the control condition, with no differences between these 3 recording conditions. The presence of an additional observer had no effect on performance. Pulse measures indicated that the presence of an additional observer increased arousal, but covariance analysis indicated no association between differences in performance and arousal. (15 ref)—*Journal abstract*.

8912. Layton, Pamela & Simpson, Adrian J. (U Sheffield, England) **Surface and deep structure in sentence comprehension.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 658-664.—16 19-25 yr old students were presented with sets of sentences expressed in either the active or passive voice. There were 1, 2, 4, or 8 sentences in a set. After a few seconds, an active or passive question was asked about 1 of the sentences. When 1 sentence was presented, less errors occurred when sentence and question voice were the same than when they differed; but for 4 and 8 sentences, less errors occurred when the question was active rather than passive. Results suggest that the surface form of a single sentence is retained for question answering, that both surface and deep structures are retained following 2 sentences, and that only the deep structures of sets of 4 and 8 sentences are retained.—*Journal abstract*.

8914. Lee, Catherine L. **Short-term recall of repeated items and detection of repetitions in letter sequences.** *Journal of Experimental Psychology: Human Learning &*

Memory, 1976(Mar), Vol 2(2), 120-127.—In 2 experiments in which strings of 9 letters were presented at a rapid rate to a total of 42 young adult Ss, the lag between presentations of the members of a critical pair was varied. The critical letters could be a repetition or a pair of nonrepeated letters, and retention was tested by a recall or a detection procedure. The probability of recalling a repeated letter (at least once) was independent of lag, but the probability of recalling both of its presentations was a decreasing function of lag. For a nonrepeated pair, both measures were independent of lag. Exp II indicated that the probability of detecting a repetition depended on lag, but the conditional probability of recalling the repeated letter once it had been detected did not. A dual-coding system for repeated letters is proposed in which memory for a repeated letter and the tag for a "repetition event" can be independent. —*Journal abstract.*

8915. Liu, In-Mao; Jeng, Chung-In & Chang, Ying-Quei. (National Taiwan U, Taipei) **One—many paired-associate learning.** *Acta Psychologica Taiwanica*, 1975, Vol 17, 19-24.—Studied 114 college students to determine (a) whether the consecutive presentation of pairs with the same stimulus member facilitates the acquisition of a one—many paired-associate list or (b) whether this procedure produces a detrimental effect. One—many paired-associate lists were constructed by pairing several responses to the same stimuli. When those pairs having the same stimulus were presented consecutively during study trials, better recall was obtained on test trials than otherwise. Presumably, the former condition allowed Ss to form vertical associations among those response members paired to the same stimulus as well as horizontal associations between the stimulus and response members of pairs. The finding that more intralist intrusion errors were obtained in the one—many than in the one—one paired-associate learning also supports the above reasoning. —*Journal abstract.*

8916. Loftus, Elizabeth F. (U Washington, Seattle) **Leading questions and the eyewitness report.** *Cognitive Psychology*, 1975(Oct), Vol 7(4), 560-572.—A total of 490 college students, in 4 experiments, saw films of complex, fast-moving events, such as automobile accidents or classroom disruptions. The purpose was to investigate how the wording of questions asked immediately after an event may influence responses to questions asked considerably later. It was shown that when the initial question contains either true presuppositions (e.g., it postulates the existence of an object that did exist in the scene) or false presuppositions (e.g., postulates the existence of an object that did not exist), the likelihood is increased that Ss will later report having seen the presupposed object. Results suggest that questions asked immediately after an event can introduce new—not necessarily correct—information, which is then added to the memorial representation of the event, thereby causing its reconstruction or alteration. 8917. Macht, Michael & Scheirer, C. James. (State U New York, Binghamton) **The effect of imagery on accessibility and availability in a short-term memory paradigm.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 523-533.—In 2 experiments with a

total of 112 undergraduates' a variant of L. R. Peterson's (see PA, Vol 34:5499) paradigm was used to investigate retrieval of single pairs of items varying in imagery value. After being presented with a single pair, the S recalled an item either in the presence or absence of the other item. Latency to respond showed that as long as 1 item of the pair was concrete no differential retrieval speeds were found. This result is interpreted as support for an organizational view of imagery. Results of Exp II suggest that retrieval effects were confined to permanent memory (long-term store). (19 ref)—*Journal abstract.*

Marslen-Wilson, William & Tyler, Lorraine K. **Memory and levels of processing in a psycholinguistic context.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 112-119.—A level of processing approach to memory was directly tested in a well defined processing context by varying the depth to which spoken prose material could be processed. A total of 20 undergraduates served as Ss in 2 experiments. The effects of successively removing the semantic and the syntactic levels of analysis produced decrements in immediate recall that were structured according to the clausal segmentation of the material. Results correspond closely to the joint predictions of a theory of sentence processing integrated with levels of processing memory theory. (15 ref)—*Journal abstract.*

8921. Matthews, W. A. & Waring, A. J. (U Southampton, England) **Organisational processes in free recall.** *Acta Psychologica*, 1975(Dec), Vol 39(6), 457-468.—In a free-recall task with 72 undergraduates, homogeneity of semantic reference and strong associative connections facilitated the recall after a 20-sec filled interval of lists of 18 words. Facilitation in the recall lists consisting of 3 sets of 6 related words when compared with 6 sets of three related words was also obtained. The organization present in the recalled sequences is reported using various clustering measures, and differences between the measures are indicated and discussed. Difficulties in the use of such measures in evaluating an hypothesis about the relationship between recall and organization are illustrated and the general theoretical issue of selecting between alternative measures of organization is considered. (Cornell U) **A Sherlockian experiment.** *Cognition: International Journal of Cognitive Psychology*, 1974-75, Vol 3(4), 307-311.—To investigate memory of materials which Ss had learned on their own time and for their own reasons, 10 members of a Sherlock Holmes society were presented with 27 sentences taken from the Holmes stories. Ss were asked to identify the story and the immediate context from which the sentence was drawn. Concrete sentences relevant to the story's themes proved to be the most effective cues; descriptions and proper names were ineffective. (French summary)—*Journal abstract*.

8932. Nelson, Douglas L.; Wheeler, Joseph W. & Brooks, David H. **Meaning and the elimination of sensory interference.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 95-102.—Conducted 3 experiments with a total of 416 undergraduates to extend the range of conditions under which the sensory interference effect might persist and to incorporate the findings within a levels-of-processing framework. In Exp I a single study-test trial was given on 20 high-imagery pairs. Stimulus similarity, instructional set, and rate of presentation were manipulated, and responses were either associatively related or associatively unrelated to their stimuli. In Exp II, multiple-trial practice was given on the unrelated pairs with imagery instructions. Similarity and rate of presentation during study and during test were varied. In Exp III, pairs were acquired under a neutral instructional set. Results indicate that sensory interference could be nullified, but only when meaning attributes were processed during study trials paced at a slow, 5-sec rate. (16 ref)—*Journal abstract*.

8935. Pollatsek, Alexander & Bettencourt, Harold O. **The spaced-practice effect in the distractor paradigm is related to proactive interference but not to short-term store.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 128-141.—Conducted 3 experiments with a total of 169 undergraduates, using the Brown-Peterson distractor task. In Exps I and II, recall was better (a) when 2 presentations of an item (a word-triple) were separated by a 22-sec interval of distracting activity rather than by a 7-sec interval (the spaced-practice effect); and (b) when a single presentation of an item was preceded by a 27-sec interval of distracting activity rather than by a 12-sec interval (decay of proactive interference). However, Exp III revealed that the spacing of 2 presentations produced no effect when decay of proactive interference was controlled. Further analysis revealed that neither effects (a) nor (b) were likely to be related to decay of traces from short-term store (as inferred from forgetting curves). Results also show that while rehearsal of an item had large effects on recall probability of that item, it had no effect on the proactive interference upon subsequent items. 8938. Richardson, J. T. & Baddeley, A. D. (Brunel U, Uxbridge, England) **The effect of articulatory suppression in free recall.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 623-629.—When Ss are required to utter a series of redundant speech sounds while memorizing lists of words, performance is impaired and the effect of phonemic similarity is reduced. If the recency effect in free recall is based upon phonemic coding then it should be very susceptible to the effects of such a procedure. Two experiments with a total of 40 undergraduates therefore explored the influence of articulatory suppression on performance in free recall. Both produced reliable effects of suppression, but neither showed the predicted interaction between suppression and serial position. It is suggested that the recency effect does not reflect a short-term phonemic store. (23 ref)—*Journal abstract*.

8939. Roediger, Henry L. & Crowder, Robert G. (Purdue U) **The spacing of lists in free recall.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 590-602.—In 2 studies with a total of 43 undergraduates, spaced presentations of 12- and 15-word lists were better recalled when no task or an easy task, rather than a demanding task, intervened between the presentations, contrary to the results of R. A. Bjork and T. W. Allen (see PA, Vol 45:5481). When no task intervened between

spaced presentations, recall was better than when presentations were massed (Exp I). Results indicate a lack of generality of Bjork and Allen's findings, often considered crucial to general understanding of spacing effects and suggest a need for a 2-factor theory of the spacing effect. Data appear to be the first evidence for a spacing effect when lists are considered as the unit of repetition. (25 ref)—*Journal abstract*.

8941. Rose, Robert J. & Rowe, Edward J. **Effects of orienting task and spacing of repetitions on frequency judgments.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 142-152.—Examined frequency judgments of words repeated 2, 3, and 5 times in a list with 0, 1, 2, 4, 8, or 16 items intervening between repetitions under different instructional sets. In Exp I, separate groups of a total of 144 undergraduates were given 1 of 3 types of instructions prior to list presentation: that a frequency judgment test would follow (intentional instruction), that a memory test would follow (nonspecific instruction), or that they were simply required to rate each word on its connotative strength with no mention of the ensuing test (incidental instructions). Both judged frequency and the effect of spacing were highest for the incidental condition and lowest for the nonspecific condition. In Exp II, 144 undergraduates received incidental orienting instructions designed to produce a graphemic, acoustic, or semantic level of processing. Both the frequency and spacing effects were enhanced by the acoustic and semantic instructions. Results are related to a levels-of-processing view of memory. (19 ref)—*Journal abstract*.

8942. Rubenstein, Herbert; Richter, Martin L. & Kay, Edwin J. (Lehigh U) **Pronounceability and the visual recognition of nonsense words.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 651-657.—Presents additional evidence from a recognition experiment with 32 undergraduates for the hypothesis that visual word recognition may involve recoding into phonemic form. Specifically, the hypothesis that less pronounceable nonsense words are recognized as nonsense faster than more pronounceable nonsense words was confirmed. It is proposed that differences in pronounceability produce their effects during the sequencing of the neural instructions associated with each phoneme.—*Journal abstract*.

8943. Sanders, Nicholas M. & Tzeng, Ovid. (Pennsylvania State U) **Type-of-test expectancy effects on learning of word lists and prose passages.** *Acta Psychologica Taiwanica*, 1975, Vol 17, 1-11.—Conducted 2 experiments to determine whether differences in expectations of tests on specific information items or on interrelationships among those items would lead to differences in performances on the 2 types of tests. In Exp I, 30 undergraduates were led by instructions and prior experience to expect either free recall or serial recall of word lists. Test expectancy effects were obtained for both types of tests ($p < .01$). In Exp II, no test expectancy results were obtained for 60 undergraduates expecting to be tested on either specific statements or logical implications of those statements from textual

materials. The contrasting results may imply that test expectancy effects occur only when tests represent clearly conflicting task requirements, though methodological difference between experiments provides an alternative explanation.—*Journal abstract*.

8945. Schane, Sanford A.; Tranel, Bernard & Lane, Harlan. (U California, San Diego) **On the psychological reality of a natural rule of syllable structure.** *Cognition: International Journal of Cognitive Psychology*, 1974-75, Vol 3(4), 351-358.—Maintains that if natural rules in phonology, such as the rule which deletes a word-final consonant before a consonant, are frequently found in unrelated languages, it must be because they tap universal features of production and/or perception. The present experiment with 31 undergraduates employed a learning task to see whether naive Ss have a predisposition for the natural rule as opposed to its converse (consonant deletion before a vowel). Ss first learned 4 novel words (nouns)—2 beginning with a consonant, 2 with a vowel—as paired associates to English "translations". Three novel adjectives were then combined with each of the 4 nouns, following the natural rule for one group of Ss, the unnatural rule for the other. The 12 phrases were cued by their English translations and the S had to respond to each with the phonologically correct sequence of adjective and noun; confirmation followed each response. Ss learning the unnatural corpus had a strong tendency to give natural responses, whereas the converse was not true. Consequently, they made many more errors en route to mastery than their natural counterparts, even when the operative rule was displayed on the 1st trial by presenting in turn each adjective with its 4 following nouns. It appears that Ss had implicit knowledge of the natural rule, even though it does not operate to any significant extent in English. (French summary)—*Journal abstract*.

8946. Schuster, Günter. (Universität Graz, Inst für Psychologie, Austria) **Functional aspects of information processing in human memory.** *Psychological Research*, 1975, Vol 38(1), 23-36.—Used a reaction-time task to test the 2-storage theory of human memory, which postulates that information, after being preprocessed in a sensory register, is directly transferred into a short-term storage system. Results indicate that search and/or decision processes were affected by associative factors; i.e., by the contents of long-term memory. The functional relation between sensory register and short-term storage, postulated in 2-stage models of memory, is questioned. An alternative model is proposed which is compatible with the experimental data.—*R. Gunter*.

8950. Singer, Robert N. & Gaines, Leonide. (Florida State U) **Effects of prompted and problem-solving approaches on learning and transfer of motor skills.** *American Educational Research Journal*, 1975(Sum), Vol 12(3), 395-403.—Investigated the transfer effects produced by cued and trial-and-error learning of a serial motor task. Cued learning involves prompted or directed learning which does not provide for the S making errors, and is therefore identified as errorless in the present study, while trial-and-error learning is errorful. Ss were 20 male and 17 female graduates and undergraduates who were randomly assigned to the cued or trial-and-error learning conditions. The cued group received heavy prompting during the initial learning of a sequence. Transfer trials followed learning trials. Trial and time to criterion were the 2 dependent variables. Cued Ss learned the sequence in significantly less time and with fewer errors. Both groups performed similarly on the transfer task, but the trial-and-error learners took significantly less time to reach criterion. It is concluded that cued conditions favor learning a new task, but in transfer learning, performance is enhanced when initial learning has been by trial-and-error. (21 ref)—E. J. Mason.

Also considered are other measures and their modifications, different kinds of memory, criteria for classification, and the dual concept of memory.—English summary.

8952. Slamecka, Norman J. (U Toronto, Canada) **Intralist cueing of recognition.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 630-637.—Conducted 2 experiments with a total of 42 undergraduates to test for effects of intralist cues on recognition probability. A forced-choice technique was used instead of the yes-no method of previous studies to avoid confounding with a possible response bias. Categorized and random lists were each tested on 2 trials, with targets appearing in the presence of 0, 1, or 3 intralist cues. Both experiments showed substantial effects of trials and list type, but no effect of intralist context. Findings do not support a direct connections assumption of item storage, but are consistent with D. Rundus's (1973) model where items are connected only to superordinate control elements. 8956. Standing, Lionel & Smith, Philip. (Bishop's U, Lennoxville, Canada) **Verbal-pictorial transformations in recognition memory.** *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 316-326.—Conducted 2 experiments in which a total of 68 undergraduates learned either pictures or descriptions of pictures and were then tested for recognition with either pictures or descriptions, in all 4 combinations. Recognition was best in the picture-picture condition, intermediate in the picture-word and word-word conditions (which did not differ significantly), and worst in the word-picture condition. The extra number of errors added by changing to a transformation condition (picture-word or word-picture) from the corresponding non-transformation condition (picture-picture or word-word respectively), was the same in either case. A model for recognition memory is proposed which postulates that both pictorial stimuli and descriptive verbal stimuli are encoded in a pictorial (or functionally equivalent) form to which subsequent transformations may be applied as required by the experimental task. The possibility of dual processing of verbal and pictorial stimuli was also examined by employing both pictures and descriptions simultaneously in the learning session and/or the test session. Evidence suggesting 2-channel operation was obtained in 3 out of 5 experimental conditions. (French summary) (22 ref)—Journal abstract.

8964. Wetherick, N. E. (U Aberdeeen, England) The role of semantic information in short-term memory. *Journal of Experimental Psychology: Human Perception and Performance*, 1974, Vol 14(5), 471-480.—Conducted a study with 138 undergraduates to examine immediate recall when 11 semantic categories were used. Short-term memory for words was found to be negatively related to the number of semantic categories from which the words were drawn (1, 2, 4, or 8). This remained true when Ss were required to recall items in the order of presentation. This result is considered in the light of current theories of short-term memory and judged to be consistent with F. I. Craik's (1973) proposed framework for memory research and inconsistent with any theory postulating a separate short-term store that takes no account of semantic factors. (19 ref)—*Journal abstract*

8965. Yuille, John C. & Ternes, Willi. (U British Columbia, Vancouver, Canada) Attention and modality specific interference as determinants of short-term verbal and visual retention. *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 360-374.—Conducted 2 experiments with a total of 240 undergraduates to investigate short-term retention of verbal and visual information as a function of interpolated activities, varying along the dimensions of attention and modality specific interference. Results show that retention losses due to competing attention demands were comparable in verbal and visual coding conditions, regardless of the modality of the interpolated activity. In addition, retention losses were larger when the same modality was involved in processing the memory and interpolated tasks. Results demonstrate a clear separation of short-term losses due to (a) attention diversion, and (b) modality specific interference, with attention diversion accounting for a larger part of total retention losses. It is proposed that the maintenance of information for short intervals relies on the availability of central attentional processes, with modality specific coding processes determining the most appropriate coding mode for a given stimulus situation. 8972. Hammer, W. Clay & Foster, Lawrence W. (Northwestern U) Are intrinsic and extrinsic rewards additive: A test of Deci's cognitive evaluation theory of task motivation. *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 398-415.—Expectancy theory and reinforcement theory of task motivation have assumed that the effect of extrinsic and intrinsic reinforcement are additive in nature. E. L. Deci (1971, 1972a, 1972b, 1972c) has recently presented tentative evidence that reportedly shows that contingent monetary rewards actually reduced intrinsic task motivation. The present experiment reexamined the evidence presented by Deci and then tested his cognitive evaluation theory explanation in both a boring and nonboring task setting with 98 undergraduates. The data presented here along with a reexamination of Deci's previous findings indicate that contingency monetary payments that are not delayed have an additive effect with intrinsic rewards on task motivation. Results are discussed in relation to their implications for management. (29 ref)—*Journal abstract*

8973. Herrell, James M. Sex differences in emotional responses to "erotic literature." *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 921.—32 males and 32 females read either a chapter from C. Willingham's *Eternal Fire*, an erotic and essentially exploitative passage, or a series of sections from *Lady Chatterly's Lover* which were modified to portray a clearly positive sexual experience for Lady Chatterly. Data from the Differential Emotions Scale and the Sexual Arousal Scale indicate that sex differences in response to erotic literature are complex and depend on the interpersonal as well as the erotic content of the passages.

- sensitive Research in Social Psychology*, 1975, Vol 6(2), 119-125. 11 refs. (D. E. Berlyne, 1975, in R. W. Zuckerman (1968) *Psychology of Aesthetics: The Aesthetic Effect and the Aesthetic Process*, R. W. Zuckerman, ed., presents simple and complex stimuli mixed together and a pre-post exposure rating. When Zuckerman presented stimuli of similar complexity and only 1 postexposure rating of stimuli, 72 undergraduates rated the pleasantness of repeatedly exposed simple and/or complex stimuli (color slides of paintings by old masters). Results show a contrast effect even on the initial presentation: complex stimuli were preferred to intermingled simple stimuli but were not consistently better liked than simple stimuli when they were not intermingled. In the Berlyne paradigm, but not in the Zajonc paradigm, a strong positive effect of novelty was found in the final postexposure ratings, apparently due to reduction caused by the regular pattern of repetition of stimuli in the Berlyne design. Neither the typical novelty nor exposure effects were supported consistently across all of the experimental conditions, suggesting that they are influenced by rather minor and subtle methodological variations.—*Journal abstract*

(U Alberta, Edmonton, Canada) **Objective self-awareness and differing standards of aggression.** *Representative Research in Social Psychology*, 1975, Vol 6(2), 82-88.—Studied the relative effects of provocation and differing standards for aggressing on aggression when persons were either objectively self-aware or self-unaware. 64 female undergraduates participated as a teacher who was either insulted or not insulted by a learner. Ss administered shocks whose increasing intensity either helped or hindered learning and did so in the presence of a video monitor which was on or off. As expected, more aggression was expressed when the prosocial value of the response was emphasized than when the hostile value of the response was emphasized, particularly under conditions of self-awareness. No differences in aggressive behavior were found between insulted and non-insulted Ss. Results reflect a flight rather than fight response, primarily when a strong emotional component is involved.—*Journal abstract*.

(U California, Davis) **Fat full and happy: Effects of food deprivation, external cues and obesity on preference ratings, consumption, and buying intentions.** *Journal of Personality & Social Psychology*, 1975(Nov), Vol 32(5), 761-766.—Studied the influence of internal and external cues on behavior of 80 obese and normal undergraduates in a $2 \times 2 \times 2$ factorial design with 2 levels of weight (obese and normal), 2 levels of stomach condition (empty and full), and 2 levels of external stimuli (food and nonfood). Obese Ss were more reactive than normals to external cues as indicated by their eating more and intending to buy more food after viewing food slides as opposed to scenery slides. However, their behavior also changed in response to food deprivation, becoming more negative. The obese Ss showed lower food consumption, lower buying intentions, and lower ratings of both food and nonfood slides in the empty condition compared to the full condition.—*Journal abstract*

From psychoanalysis toward social learning theory.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Jun), Vol 30(4-5), 413-451.—Examines psychoanalytic theory and the social learning theory as explanations for the various personal and cultural reactions to the delay of gratification (DG). Under psychoanalytic theory, DG is explained in terms of hypothetical internal events in the form of ego organization and energy-binding ideations. Under social learning theory, DG is viewed as manipulatable social-stimuli events which A. Bandura and W. Mischel (see PA, Vol 40:2388) consider the critical determinants of self-controlling behavior. It is suggested that the Freudian and non-Freudian approaches to psychoanalytic theory have clouded the meaning of that theory. Various studies are presented which indicate that social learning theory is too ambiguous for exact analysis. Further interpretations are necessary to bridge the gap between the sociological approach and the intrapersonal psychoanalytic interpretations. (166 ref)—*A. J. Ter Keurst*.

8996. **Coe, William C.; Baugher, Robert J.; Krimm, William R. & Smith, Jerry A.** (California State U, Fresno) **A further examination of selective recall following hypnosis.** *International Journal of Clinical & Experimental Hypnosis*, 1976(Jan), Vol 24(1), 13-21. —Tested 29 college students for posthypnotic amnesia using the Stanford Hypnotic Susceptibility Scale, Form C (SHSS:C). They rated each item for emotional tone (pleasant-unpleasant) and judged whether or not they had passed or failed it. There was some support for the notion that failed items are judged more unpleasant than passed items, but the emotional tone of an item was not related to its being recalled posthypnotically. There were minimal findings to suggest that Ss recall items which stand out in their experience. Discrepancies with earlier findings and the possible role of processes associated with normal memory are discussed. (German, French & Spanish summaries) —*Journal abstract.*

8998. **Lewis, Marc S.** (Case Western Reserve U) **Determinants of visual attention in real-world scenes.** *Perceptual & Motor Skills*, 1975(Oct), Vol 41(2), 411-416. —Examined the saliency of size, movement, and human content variables in visual selective attention. 48 undergraduates named stimuli present in motion pictures of real world scenes or in animated cartoon controls during a 15-sec exposure period. Regardless of the type of presentation that they saw, Ss tended to name large and/or moving stimuli more often than small and/or nonmoving stimuli. Small human stimuli were named more frequently than small nonhuman stimuli, while

there were no differences between the frequencies with which large human and nonhuman stimuli were named. The order in which Ss named stimuli was not related to either the size, movement, or human content variables. Results are discussed in terms of the generalizability of the results of previous studies to conditions simulating the real world. (15 ref) —*Journal abstract.*

9005. **Wickens, Christopher D.** (U Illinois, Champaign) **The effects of divided attention on information processing in manual tracking.** *Journal of Experimental Psychology: Human Perception and Performance*, 1976(Feb), Vol 2(1), 1-13. —Six right-handed male undergraduates performed a manual tracking task concurrently with each of 2 secondary tasks: an input task (auditory signal detection) and an output task (application of a constant force). A feedback-control analysis of tracking performance was utilized to analyze the time-sharing decrements observed in mean squared error, in terms of components due to processing delay, addition of internal processing noise, and change in response bias (tracking gain). Results indicate that only the parameters measuring noise and gain were sensitive to time-sharing conditions, and these only to concurrent performance of the force application task. It is concluded that limits of attention in dual-task performance are

more severe in output than in input stages of processing, but that these limits are not necessarily those of a single-channel bottleneck. A broader conception of attention is proposed that includes changes in processing noise and shifts in response bias as attention-related phenomena. (26 ref)—*Journal abstract*.

9006. Wohlwill, Joachim F.; Nasar, Jack L.; DeJoy, David M. & Foruzani, Hossein H. (Pennsylvania State U) **Behavioral effects of a noisy environment: Task involvement versus passive exposure.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 67-74.—Compared the effects of noise under active task involvement as opposed to passive exposure, using 80 undergraduate Ss who were assigned to 1 of 4 conditions representing 2×2 combinations of task vs no task and noise vs quiet. Performance on a dial-monitoring task was unaffected by noise. Ratings of interest and tenseness were significantly higher under the task condition; tenseness was also higher under noise. On a posttest of resistance to frustration, both noise groups, regardless of task condition, showed a smaller degree of persistence on insoluble puzzles than the no-noise groups. Results suggest that aftereffects of noise are not dependent on the power of noise to disrupt task performance.—*Journal abstract*.

studies using 2nd-order schedules for keypress responding of squirrel monkeys which produced iv injections of cocaine. Under 2nd-order schedules, drug injections occur only when the monkey has completed a sequence of schedule components. This is a useful technique for analyzing sequences of drug-seeking behavior because it is possible to investigate the ways in which scheduled stimulus presentations affect responding in the sequence, without changing the frequency of drug injection. Results demonstrate that brief environmental stimuli that have been associated with drug injection can control rates and patterns of behavioral responding that are strikingly similar to those initially maintained by the cocaine injections themselves. 2nd-order schedules provide a valuable technique for the experimental study of environmental factors involved in drug dependence. (USSR Academy of Sciences, Inst of Higher Nervous Activity, Moscow) **[Neurotic states in dogs induced by a substitution of regular reinforcement of conditioned signals by a probabilistic one.]** (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 243-251.—Studied the effects when probabilistic reinforcement replaced continuous (regular) reinforcement of conditioned signals in 6 dogs. The independent variable consisted of 2 amounts of food of different areas. Results show that the magnitude of conditioned reflexes produced maximal secretory reactions in 2 Ss; in 3 Ss, response to probabilistic reinforcement was the same as response to the regular small reinforcement. Results obtained on changes in the vegetative components of the CR, e.g., cardiac component, were confounded and therefore, nonsignificant. Parameters studied and lack of correlatable results are discussed. (English summary) (31 ref)—L. V. Majovski.

9053. Riley, Donald A. & Leith, Charles R. (U California, Berkeley) **Multidimensional psychophysics and selective attention in animals.** *Psychological Bulletin*, 1976(Jan), Vol 83(1), 138-160.—Notes that the hypothesis that animals selectively attend developed mainly in explanations of certain conditioning and discrimination learning phenomena. This hypothesis of selective attention is evaluated against a continuity (nonattentional) theory, and most, if not all, facts of simple learning can be accounted for by a nonattentional analysis. Thus, the usefulness of selective attention as an explanatory notion remains in doubt, and few phenomena can be regarded as exemplars of selective attention. In contrast, many examples of selective attention phenomena have been discovered in human information processing experiments. Emphasis in these experiments is on instructional and stimulus variables as they affect steady-state performance rather than response learning. Recent research with animals, modeled on human steady-state tasks, promises to provide similar instances of selective

attention effects in performance. (2 p ref)—*Journal abstract*.

(USSR Academy of Medical Sciences, Inst of Experimental Medicine, Leningrad) **[Comparative stability of conditioned reflexes of bears to relative and absolute cues.]** (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 252-259.—Studied differentially conditioned reflexes (CRs) in 3 bears (*Ursus actorus*) to a circle of prescribed size, using relative and absolute cues in the following paradigm: reinforcement on a relative cue, an absolute cue, any cue, and a relative cue again. Four more Ss were conditioned but with a reversal of this reinforcement process involving the signal cueing of the initial pair of circles. In the 2nd series, involving cue reversal, only 1 S demonstrated a successful transition from the reflex to a relative cue. These results are compared with findings of similar experiments with monkeys. Carnivora show a more stable relative cue reflex related to the initial differential CR. (English summary) (17 ref)—L. V. Majovski.

9060. Alderson, Jack & Johnston, Robert E. (Cornell U) **Responses of male golden hamsters (*Mesocricetus auratus*) to clean and male scented areas.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 505-510.—The effects of odors from male golden hamsters on the exploration of an unfamiliar area by male conspecifics were tested in 2 experiments. A total of 22 experimental Ss and 6 normal and 3 glandectomized odor donors were used. Ss entered an area with a greater latency when conspecific male odors were present than when the area was unscented. This effect waned with repeated trials. Ss entered the area more slowly and spent less time there when it was scented with odors from a normal donor than when it contained odors from a flank glandectomized donor. The significance of these results in interpreting the communication functions of the flank gland is discussed.—*Journal abstract*.

9066. Davis, Roger E. (U Michigan) Readiness to display in the paradise fish *Macropodus opercularis*, L., *Belontiidae*: The problem of general and specific effects of social isolation. *Behavioral Biology*, 1975(Dec), Vol 15(4), 419-433.—Previous studies have shown that readiness to perform species typical social displays and readiness to startle in reaction to novel stimuli are increased in socially isolated paradise fish. In the present 4 experiments, males that were kept in large bisexual populations or were socially isolated for a few hours showed low display and low startle readiness. Reactivity was increased following 1 day of social isolation, and a further increase was obtained by prolonging the isolation up to 4 days. Males that received continuous visual stimulation from a conspecific male or from a goldfish for 4 days showed reduced display and reduced startle readiness. Social isolation appears to have general effects on behavior, increasing reactivity to various kinds of stimuli in addition to social. It is proposed that isolation-induced increases in display readiness are largely a result of the low level of external stimulation. Social isolation may or may not have specific effects on social display readiness. (47 ref)—*Journal abstract*.

9068. Dewsbury, Donald A. (U Florida) Diversity and adaptation in rodent copulatory behavior. *Science*, 1975(Dec), Vol 190(4218), 947-954.—A 9-yr research project has indicated that copulatory patterns of muroid rodents are an ideal locus for comparative behavioral research. Such patterns are highly stereotyped within and between individuals of a given species, variable across species, and readily elicited in the laboratory. Detailed behavioral comparisons of a broad range of muroid species have revealed extensive behavioral diversity not anticipated from research on laboratory rats. Various muroid species display postejaculatory copulations without sperm transfer, locking, thrusting, and other behavioral patterns. This behavioral diversity appears

not to be the result of a simple linear pattern of evolutionary history, but rather to have evolved repeatedly in response to particular selective pressures acting on particular species.—*Journal summary*.

9070. Eyer, Jerry C. & Ratner, Stanley C. (Huron Coll) Effects of Bobwhite calls and repeated testing on tonic, defensive, immobility of Bobwhite quail. *Behavioral Biology*, 1975(Dec), Vol 15(4), 491-496.—Chase, capture, and restraint of Bobwhite quail (*Colinus virginianus*) typically lead birds to become immobile. In Exp I time to capture a bird (chase time), duration of immobility, and rate of respiration during immobility were measured on 2 successive tests with 12 Ss. Chase time was significantly related to duration of immobility. Duration of immobility, the most commonly used measure of the response, was a reliable index of it. In Exp II aspects of the predator-defense interpretation of immobility were investigated in 22 Ss. Covey calls, alarm notes, pure tones, and quiet were imposed on Ss during repeated tests of immobility. Covey calls led to significant decreases in durations of immobility as compared with the other conditions. Prior research showed that visual stimulation during immobility affected its duration; these results show that a biologically relevant auditory stimulus affects duration.—*Journal abstract*.

Strum (1975) has explained the high frequency of predation by baboons as the result of social tradition. The present paper suggests that ecology, and bioenergetic considerations in particular, are fundamental in determining whether such behavior can arise and be maintained. Limitations of the social tradition concept are noted, and a theoretical energy analysis of growth, maintenance, and reproduction activities is presented. It is predicted that a stable equilibrium in the frequency of predation will be reached as interference competition with conspecifics progressively negates the benefits gained in taking animal prey. Comparisons of baboon behavior with that proposed for early hominids are discussed, and the importance of bioenergetics and feeding strategy to adaptation is emphasized. A reply by Strum is included.—L. Gorsey.

9078. Pollak, Edward I. & Sachs, Benjamin D. (State U New York, Binghamton) **Excitatory and inhibitory effects of stimulation applied during the postejaculatory interval of the male rat.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 449-461.—The male rat's sexual responsiveness to stimuli applied during the postejaculatory interval (PEI) was examined in 2 experiments with a total of 48 Long-Evans rats. Exp I was a test of the hypothesis that sexual behavior could be facilitated by presenting a novel female to a male during the final portions of the PEI. Although female variation is known to rearouse a sexually sated male, the same manipulations performed either early or late in the PEI, but prior to sexual exhaustion, were without effect. In Exp II Ss' responses to mild electric shocks applied at different points in the PEI were studied. Shocks delivered soon after ejaculation (during the hypothetical absolute refractory period) delayed the resumption of copulation. Stimulation applied later in the PEI (during the relative refractory period) facilitated a resumption of sexual behavior. It was determined that the facilitative consequences of shock are transitory, persisting for a matter of seconds; the inhibitory effects may be evident for several minutes. 9079. Porter, Richard H. & Etscorn, Frank. (George Peabody Coll for Teachers, John F. Kennedy Ctr for Research on Education & Human Development) **A primacy effect for olfactory imprinting in spiny mice (*Acomys cahirinus*).** *Behavioral Biology*, 1975(Dec), Vol 15(4), 511-517.—Conducted 4 experiments with a total of 90 spiny mouse pups in which, following 60 min of exposure to 1 olfactory stimulus on the day of birth and 60 min of exposure to a 2nd odor on Day 2, Ss were found to prefer the olfactory stimulus experienced on the day of birth. However, when the period of exposure to the Day 2 odor was 2 or 4 times as long as the length of exposure to the Day 1 odor, no preferences were subsequently found for either stimulus. Since Ss with no prior Day 1 treatment responded preferentially to an odor to which they had been exposed on Day 2, the data indicate that a primacy effect will occur following equal periods of olfactory exposure during the sensitive period for olfactory imprinting. This primacy effect is not immutable, however, for it can be precluded by increasing the relative length of exposure to the recency stimulus. Results are considered analogous to those of comparable studies of avian imprinting.—*Journal abstract*.

9080. Smith, W. John; Chase, Julia & Liebllich, Anna K. (U Pennsylvania) **Tongue showing: A facial display of humans and other primate species.** *Semiotica*, 1974, Vol 11(3), 201-246.—Reports an extensive preliminary study of tongue-showing behavior. Observations on American

nursery-school children, on all age groups in Philadelphia and in Panama and the Canal Zone, on captive gorillas and orangutans suggested the hypothesis that tongue-showing signifies unwillingness to interact by an individual engaged in demanding activity. Informal experiments elicited tongue-showing from nursery-school children who were approached by adults while performing difficult or absorbing tasks. In some contexts, such as mild reprimand (by the tongue-shower) the social aversion component seemed primary. In other instances involving a demanding task but little probability of interruption, the "otherwise engaged" meaning seemed primary. A quantitative study ranked 6 pool players on ability, and compared tongue-showing on hard and easy shots. Good players tongue-showed more on hard than on easy shots, but overall tongue-showed less than poor players, who tongue-showed during both hard and easy shots. The ontogeny of the gesture is discussed in terms of food rejection by infants. (28 ref)—C. A. Sherrard.

PHYSIOLOGICAL PSYCHOLOGY

9085. Broušek, Ján. (Výskumný ústav detskej psychológie a patopsychológie, Bratislava, Czechoslovakia) **[A differential evaluative registration technique in neurophysiology.]** (Slovak) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(2), 173-180.—The differential method utilizes comparative amplifiers to evaluate differences of 2 electrical signals whereby, in addition to the 2 recordings of the signals, a 3rd recording of the resulting differences of both signals is made. The 2 signals may be compared to all their parameters such as phase,

amplitude, width of impulse, or only some of them. This method may be useful for the interpretation of electric brain potentials recorded for both hemispheres, for comparisons of associated movements of 2 hands, or differences in tremor.—*Journal summary.*

9086. Hartman, Boyd K. & Margolis, Frank L. (Washington U, Medical School, St Louis) **Immunofluorescence localization of the olfactory marker protein.** *Brain Research*, 1975, Vol 96(1), 176-180.—Presents preliminary results of the isolation of a low molecular weight acidic protein from the olfactory bulb of the mouse and rat brain. The restricted localization of the protein to the olfactory epithelium, olfactory nerves, and synaptic glomeruli in the bulb, and its absence from other areas in the bulb or brain indicated that the protein is exclusively associated with the primary olfactory chemoreceptor neurons.

9087. Ray, Oakley S. & Barrett, Robert J. (VA Hosp. Nashville, TN) **Behavioral, pharmacological, and biochemical analysis of genetic differences in rats.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 391-417.—Conducted a series of experiments, begun earlier by the authors (see PA, Vol 44:16211) with Holtzman albino, Long-Evans black-hooded, Fisher CDF, and Zivic-Miller CD albino rats, and continued in the present study with Fisher 344, WF/f Mai, BUF/f Mai, and AC1/f Mai inbred rat strains. All strains showed clear behavioral differences in activity and in shock avoidance behavior. Intensive study of 2 behaviorally very different strains, Fisher 344 and Zivic-Miller, showed that their differences in shuttle box avoidance acquisition is genetic and is based on their activity response to shock stress rather than to a difference in general learning ability. Drug administration and lesion studies suggested that the behavioral differences were due to differences in brain monoamine responses to shock stress. Biochemical studies of brain serotonin, norepinephrine, and dopamine turnover following stress support this concept. (24 ref)—*Journal abstract.*

Neurology & Electrophysiology

9088. Barry, Robert J. & Beh, Helen C. (U New South Wales, School of Education, Australia) **EEG correlates of the afterimage of visual stimulation.** *Psychophysiology*, 1976(Jan), Vol 13(1), 75-80.—Studied occipital EEG alpha activity following visual stimuli of varying intensity with particular reference to the visual afterimage. 20 male undergraduates each received 3 stimuli of differing intensity under 2 conditions: with and without reporting of afterimage onset and offset required. A 3rd condition controlled for possible reporting effects on the EEG. Findings indicate that visual afterimages are a significant determinant of the duration of EEG alpha desynchronization following visual stimulation and that where visual stimuli are employed, the duration of EEG alpha blocking is unsuitable as an indicator of the orienting response to such stimulation.—*Journal abstract.*

9089. Bechtere, N. N.; Syka, J. & Altman, J. A. (USSR Academy of Sciences, Pavlov Inst of Physiology, Leningrad) **Responses of cerebellar units to stimuli simulating sound source movement and visual moving stimuli.** *Experientia*, 1975, Vol 31(7), 819-821.—Experiments were performed on cats immobilized by Diplacin

(a muscle relaxant with effects similar to dextro-Tubocurarine). Clicks and trains of clicks were used for auditory stimulation, while light spots and black targets were used for visual stimulation. It is concluded that cerebellar units from Areas VI and VII respond to moving visual stimuli and acoustic stimuli simulating movement of the sound source. Information about movement of visual and acoustic stimuli is important to the cerebellum. (German summary)—J. L. Andreassi.

9090. Briggs, Gary G. & Nebes, Robert D. (U Pittsburgh, Western Psychiatric Inst & Clinic) **Patterns of hand preference in a student population.** *Cortex*, 1975(Sep), Vol 11(3), 230-238.—Assessed the handedness of 1,599 undergraduates using a modification of M. Annett's (1967) inventory. A strength of preference scale was added to make the "mixed" classification a better indicator of ambidexterity than in the original measure by eliminating Ss who showed preference for the same hand for nearly all tasks. Contrary to previous studies, sex was not significantly related to handedness. A family history of left handedness was significantly related to S's handedness. It is concluded that this modified form of the Annett inventory provides an easily scorable measure of handedness for large groups as well as individual testing situations. The ease with which data may be transferred by keypunch operators before special analysis or sorting procedures is pointed out.—*Journal summary.*

9094. Davidson, Richard J. & Schwartz, Gary E. (Harvard U) **Patterns of cerebral lateralization during cardiac biofeedback versus the self-regulation of emotion: Sex differences.** *Psychophysiology*, 1976(Jan), Vol 13(1), 62-68.—Compared changes in cerebral asymmetry during self-control of heart rate (HR) with changes during the production of affective imagery, and studied sex differences in hemisphere function during performance of these 2 tasks. HR and bilateral parietal EEG filtered for alpha were recorded from 20 right-handed male and female undergraduates during cardiac control and image self-generation. HR showed significant effects between up vs down in prefeedback and feedback and between anger vs relaxing imagery in the image phase. EEG data indicate similar patterns of hemispheric asymmetry in both sexes during prefeedback. However, with the introduction of feedback, females shifted to greater relative right hemisphere activation comparable to what they showed when specifically instructed to think emotional thoughts; males showed little differentiation between conditions. Data indicate that the self-regulation of HR with

biofeedback in males and females may be accomplished by strategies involving different underlying patterns of neurophysiological processes. (33 ref)—*Journal abstract.*

9095. Diekhoff, George M. (Texas Christian U) **Effects of feedback in a forced-choice GSR detection task.** *Psychophysiology*, 1976(Jan), Vol 13(1), 22-26.—Used a signal detection paradigm to study feedback effects on the detection and identification of GSRs in 32 undergraduates. GSR detection was measured by the absolute difference between the areas above and below the receiver operating characteristic (ROC) curve and reflected the extent to which Ss were able to differentiate between GSR and no-GSR trials. GSR identification was measured by the area below the ROC curve and reflected the labeling strategy (accurate or reversed) chosen by the Ss. External feedback as to the presence or absence and relative magnitude of GSRs was not necessary for differentiation of GSR and no-GSR trials, and such feedback was detrimental to increased differentiation over sessions. External feedback may, however, have been useful in directing the attachment of identifying responses to the differentiated internal events. It is concluded that internal event detection tasks may be seen as examples of schematic concept formation involving internal stimulus events. (15 ref)—*Journal abstract.*

9096. Dobrolyubov, V. Yu. (Kirov Medical Inst, Gorky, USSR) [On the functional organization of the visual cortex units of cats in ontogenesis.] (Russ) *Zhurnal Vyshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 392-399.—Studied the effect of background and light-evoked stimuli on the visual cortex organization of immobilized kittens from the age of 4 hrs through 60 days. These stimuli produced spike activity in the visual unit of the Ss as early as the 3rd or 4th day of life. Responses to acoustic (background) stimuli were first recorded on the 10th day. Bisensory units showed responses with increasing age. Curves of age-dependent changes in the monosensory units, average levels of rhythms, and latency periods of light-evoked responses were too complex to interpret due to confounding experimental factors. Heterochronic involvement of the activity recorded in neuronal units and the significance of the results obtained are discussed. (English summary) (23 ref) L. V. Majovski.

9097. Donchin, Emanuel. (U Illinois, Champaign) **On evoked potentials, cognition, and memory.** *Science*, 1975(Dec), Vol 190(4218), 1004-1005.—Presents 2 comments which argue that the conclusions reached by H. Begleiter and B. Porjesz (1975) in their study on the effects of decision making on vertex event-related brain potentials are unwarranted in view of methodological weaknesses (e.g., potentials from other scalp loci should have been recorded) and that while the P300 component may reflect an act of decision making, it does not reflect anything about the contents of that decision. A rebuttal to these and other criticisms by Begleiter and Porjesz which suggests that P300 was not the only component recorded is provided.

9098. Dus, V. & Wilson, S. J. (St Bartholomew's Hosp, London, England) **The click-evoked post-auricular myogenic response in normal subjects.** *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol

39(5), 523-525.—Investigated the presence of the posterior auricular myogenic reflex in 37 19-79 yr olds and 8 4-8 yr olds. Click stimuli were delivered alternately to each ear and both ipsilateral and contralateral responses were recorded simultaneously. Smiling and head down position increased the number of responses. With this method, in contrast to previous findings, it was possible to demonstrate bilateral auditory reception in 89% of the 45 Ss. (French summary)—*Journal summary.*

9099. Efremova, T. M. & Trush, V. D. (USSR Academy of Sciences, Inst of Higher Nervous Activity & Neurophysiology, Moscow) [Electrophysiological investigation into some kinds on internal inhibition.] (Russ) *Zhurnal Vyshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 292-300.—Studied power spectra of the biopotentials produced in the neocortex and dorsal hippocampus and their role in internal inhibition, using 8 rabbits as Ss. Electrophysiological investigation was done by means of chronic implantation. Results showed that the action of positive and negative conditioned stimuli (CS) produced well-marked theta rhythms in biopotentials. Negative conditioned stimuli produced a slowing of the theta rhythm (compared with the prestimulus period) and discordant processes in the theta range between biopotentials in the neocortex and the dorsal hippocampus. This discordance in the structures of the system is believed to be an integral factor in the mechanism of internal inhibition. The possibility that the neocortex and hippocampus are components of a functional system formed under the influence of conditioning is discussed. (English summary)—L. V. Majovski.

9100. Eisenberg, Rita B.; Marmarou, Anthony & Giovachino, Patricia. (St Joseph Hosp, Research Inst, Lancaster, PA) **EEG changes to a synthetic speech sound: A preliminary report.** *Journal of Auditory Research*, 1974(Jan), Vol 14(1), 29-43.—Exposed 60 13 hr-27 yr old Ss to 30 trials with an uninflected, 1.16-sec synthetic vowel ("ah") presented every 90 sec at 60 db SPL. The validity of response data was determined statistically by testing differences between stimulus-bound and "catch" trial data during selected 500-msec epochs, and average evoked responses (AERs) were studied both by visual inspection and by computer averaging. Results suggest that synthetic vowels are extremely potent stimuli at all stages of development. Significant AERs to a 30-trial schedule were obtained in all 3 leads explored (central, frontal, and temporal) in all Ss. The wave form associated with the "probe" stimulus differed appreciably from that associated with clicks, pure tones, and other "constant" signals, most notably with respect to the increased latency and magnitude of major response components. Results support the notion that speech-like signals are processed differentially and at relatively high levels of the auditory system. (41 ref)—*Journal summary.*

9102. Ford, Judith M.; Roth, Walton T. & Kopell, Bert S. (Stanford U, Medical School) **Auditory evoked potentials to unpredictable shifts in pitch.** *Psychophys-*

siology, 1976(Jan), Vol 13(1), 32-39.—Recorded auditory evoked potentials (EPs) from 12 Ss presented with a regular series of tone pips at 1 of 3 rates (1, 2, or 4/sec). Occasionally 1 of the pips was 5%, 25%, or 100% (an octave) different in pitch from the repetitive background pips. These "mismatch" tones occurred at random with a mean interval of 12 sec for all of the repetition rates. This determined an average sequential probability (0.083, 0.042, 0.021) that a tone would be a mismatch. On different runs, Ss either pressed a button each time they heard a mismatch or read a book. The amplitude of a large negative component (N2 at 154 msec) evoked after mismatch tones was unrelated to degree of mismatch but was larger to all the mismatch tones than to the background pip. Instructions to attend did not affect N2. A subsequent positive peak at 277 msec (P3), recorded during reading, did increase in amplitude with increasing mismatch, as did a P3 at 330 msec recorded during responding. Sequential probability had no main effect on N2 or P3. It is suggested that the well-known influence of stimulus uncertainty on P3 may be determined by the temporal rather than sequential uncertainty of events, or that the range of probabilities used was too narrow. (26 ref)—*Journal abstract*.

9103. Harvey, John A.; Schlosberg, Arthur J. & Yunger, Libby M. (U Iowa) **Behavioral correlates of serotonin depletion.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1796-1801.—A review of a variety of behavioral effects of 5-hydroxytryptamine (5-HT) depletion including an enhanced response to lysergic acid diethylamide and amphetamine suggests that the ascending serotonergic system may have a general role in the inhibition of arousal, rather than a specific role with respect to various categories of behavior. Depletion of telencephalic serotonin (5-HT) content by medial fore-brain bundle lesions, which interrupt the ascending serotonergic pathways or by parachlorophenylalanine produces an increased sensitivity to pain as measured by the flinch-jump, stabilimetric, or hot-plate methods. Examination of the effects of a number of other lesions and drugs indicate that dopamine, norepinephrine, and acetylcholine are not involved in pain sensitivity. Data from rats are presented which show that the frontal pole, hippocampus, and amygdala are innervated by the ascending serotonergic pathways, and cells in these areas show inhibition of firing following the iontophoretic application of 5-HT. Other data suggest that the serotonergic system normally acts to inhibit the effects of painful stimuli. (51 ref)—*Journal abstract*.

9105. Hjorth, Bo. (Research & Development Lab, Solna, Sweden) **An on-line transformation of EEG scalp potentials into orthogonal source derivations.** *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 526-530.—Describes a new type of EEG derivation which detects source activity as it appears at the surface level of the scalp. It is presented in the 10-20 system of electrode placement as an analog superposition of 4 bipolar derivations, forming a star-like configuration

around each electrode. Visual estimation of the topographical origins of a pattern is thus replaced by a more efficient on-line process which derives source activity at the position of each electrode. Correlational tests indicate that the separation of adjacent derivations is improved by a factor of 2-4, compared to the corresponding bipolar and common reference derivations. As a result of the partition of the scalp into 19 source areas, instead of using an arbitrary number of potential differences, 1 fixed montage with 19 recorder channels is sufficient to present the total surface activity within the limits of resolution of the electrode system. (French summary)—*Journal summary*.

9106. Hord, D. J. et al. (Naval Health Research Ctr, San Diego, CA) **Feedback for high EEG alpha does not maintain performance or mood during sleep loss.** *Psychophysiology*, 1976(Jan), Vol 13(1), 58-61.—Replicated a study by D. J. Hord et al (1975) using more Ss, more periods of testing, and differential EEG feedback. 20 18-22 yr old male navy volunteers served as Ss. In Group A, auditory feedback was contingent on high alpha, and in Group B, auditory feedback was contingent on low alpha and low theta. All Ss were repeatedly measured on auditory vigilance, addition, immediate recall, and feelings of sleepiness for 40 hrs during which no sleep was permitted. 60 min of EEG feedback were given during each block of 220 min. Group A did produce significantly more alpha for the 1st 24 hrs but this difference was not maintained. Both groups had significant sleep-loss impairment on all measures. There were no significant differences between the groups in the amount of impairment. It is concluded that self-enhanced EEG alpha activity does not prevent impairment of performance or mood during sleep loss.—*Journal abstract*.

9111. Lelord, G.; Laffont, F. & Jusseume, Ph. (Service d'Explorations Fonctionnelles Psychopathologiques, Tours Cedex, France) **Conditioning of evoked potentials in children of differing intelligence.** *Psychophysiology*, 1976(Jan), Vol 13(1), 81-85.—Compared the

conditioning of averaged evoked potentials in 3 groups of a total of 34 children (average age 11 yrs): normals, IQ between 50 and 60, and IQ between 20 and 50. Sound was used as the CS, light as the UCS, and 68 sessions were recorded. Decrease in the number and in the amplitude of potentials evoked by sound was observed from the normal to the lowest IQ group, whereas generalized slow waves increased from these groups. Conditioning was different in the 3 groups. In the normal Ss it modified the conditioned evoked potential to sound. In the retarded Ss, it modified generalized slow waves and brought about the reproduction of a temporal sequence. (18 ref)—*Journal abstract*.

(U Queensland, Australia) **The lateralized effects of concurrent cognitive activity on a unimanual skill.** *Cortex*, 1975(Sep), Vol 11(3), 283-290.—Attempted to correct methodological weaknesses of previous studies of cerebral lateralization with manual tasks by using a "spatial" cognitive task, an additional control condition using both verbal and spatial information, and a manual skill (button pressing) that did not require S to observe his or her performance. 12 right-handed university students were given 4 cognitive tasks: (a) spatial, in which Ss found hidden figures in a design; (b) verbal, which consisted of arithmetic problems; (c) spatial-verbal control, which consisted of a geometric problem requiring the use of letters and digits; and (d) no activity. The time spent solving each problem and the number of button presses performed during it were recorded. There were 8 different conditions in all (4 tasks and 2 hands) and each S performed each condition 8 times in a counterbalanced design. While left hand performance under spatial-verbal conditions was enhanced under concurrent verbal activities, no other significant enhancement of performance occurred. Methodological issues are discussed.—*Journal summary*.

9116. Meshchersky, R. M.; Fomin, B. A. & Novikova, R. V. (USSR Academy of Medical Sciences, Inst of Higher Nervous Activity & Neurophysiology, Moscow) **[Participation of the dominant hemisphere in the formation of short-term memory.]** (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 425-427.—Studied the cortical activity of the dominant hemisphere in 15 rabbits and its effect on the formation of a short-term memory trace measured by electrical potential recordings. The amplitude and frequency of the Ss' on-off responses were measured. Cerebral dominance in relation to control of short-term memory processes is discussed.—*L. V. Majovski*.

9119. Morocutti, Cristoforo et al. (U Degli Studi, Clinica delle Malattie Nervose e Mentali, Rome, Italy) **[A note regarding individual variability of contingent negative variation (CNV).]** (Ital) *Rivista di Psichiatria*, 1975(May-Jun), Vol 10(3), 231-238.—12 normal volunteers between 19 and 35 yrs old were examined and data were recorded in 3 sessions, always under the same conditions, at intervals of 26-60 days. The EEG parameters were amplitude of the maximum peak, latency of the maximum peak, and the mean amplitude of the wave. A notable stability of CNV for every S was found each time, with latency the most constant parameter; mean magnitude and maximum peak showed a slightly greater mean variability. Results are discussed from the viewpoints of modern neurophysiology and psychology.—*Journal summary*.

9120. Nachshon, Israel & Carmon, Amiram. (Bar-Ilan U, Ramat-Gan, Israel) **Hand preference in sequential and spatial discrimination tasks.** *Cortex*, 1975(Jun), Vol 11(2), 123-131.—Hand preference in sensorimotor discrimination tasks was tested on 80 right-handed Ss in 4 experiments (handedness was determined by R. C. Oldfield's 1971 Edinburgh inventory). One set of experiments compared the abilities of the 2 hands to perform sequential tasks. The other set compared spatial abilities of the 2 hands. Within each set one experiment involved unimanual performance, and the other bimanual performance. Results show that Ss performed better with their right hand on the bimanual sequential task, and better with their left hand on the bimanual spatial task. No hand preference was found in the unimanual task. Findings are interpreted as reflecting the differential sensorimotor dominance of the left and right hemispheres for sequential and spatial tasks respectively. (22 ref)—*Journal summary*.

(Bowling Green State U) **Medial and lateral hypothalamic oxygen consumption as a function of age, starvation and glucose administration in rats.** *Brain Research*, 1975, Vol 94(1), 133-140.—In 3 experiments with a total of 54 fed male albino Sprague-Dawley rats, in vitro oxygen consumption of the ventromedial hypothalamus (VMH) was reliably higher than that of the lateral hypothalamus (LHA), and this differential effect was abolished by prior food deprivation. The VMH-LHA ratio in oxygen consumption was inversely related to food intake. Implications for the nature of hypothalamic control of feeding are discussed.

9124. Poggio, G. F. et al. (Johns Hopkins U, Medical School) **Spatial and chromatic properties of neurons subserving foveal and parafoveal vision in rhesus monkey.** *Brain Research*, 1975, Vol 100(1), 25-59.—Studied response properties of neurons in the striate cortex which subserve the central retina (0-2°) and parafoveal retina (4-7°) in 30 unanesthetized rhesus monkeys. Neurons sensitive to the orientation of the stimulus in the visual field (simple, complex, and hypercomplex) and neurons without orientation selectivity (concentric and a new class termed "uniform") were found. In the foveal cortex, nonoriented cells were more numerous, and orientation-sensitive cells had less strict spatial stimulus requirements than in the parafoveal cortex. Most neurons received a monocular input, either exclusively or very predominantly. Three types of neurons were recognized on the basis of their responses to chromatic stimuli: luminosity, spectrally-tuned, and spectrally-opponent neurons. The distribution of functional types among different cortical layers was similar in the parafoveal and foveal cortex. Ocular dominance and orientation sensitivity were independent dimensions of cortical organization. The correlation between spatial and chromatic properties did not vary between different cytoarchitectonic layers, suggesting that these neuronal properties depend on conjoined projectional and intracortical connecting mechanisms. (50 ref)—*Journal abstract*.

9125. Poon, Leonard W.; Thompson, Larry W. & Marsh, Gail R. (VA Outpatient Clinic, Normative Aging Study, Boston, MA) **Average evoked potential changes as a function of processing complexity.** *Psychophysiology*, 1976(Jan), Vol 13(1), 43-49.—Average evoked potentials and contingent negative variation (CNV) recorded from 19 undergraduates during simple recognition and discriminative responses to tachistoscopically presented letter-pair stimuli showed a systematic shift toward greater overall positivity (i.e., smaller CNVs and larger late positive components) during increased processing load. In addition, more positive P2 components were found in the right as compared to the left hemisphere during simple recognition, and this asymmetry was enhanced during the more complex processing condition. (42 ref)—*Journal abstract*.

9126. Raybourn, Michael S. (U Rochester, Ctr for Visual Science) **Spatial and temporal organization of the binocular input to frog tectum.** *Brain, Behavior & Evolution*, 1975, Vol 11(3-4), 161-178.—Single-unit recordings from 170 neurons in the optic tectum of 48 frogs demonstrated the existence of a systematic spatial separation between the direct contralateral and indirect ipsilateral excitatory receptive fields. Marked differences in this spatial organization were found between paralyzed and anesthetized Ss. Significant latency differences were found between sustained and transient contralateral fibers. Corresponding latency differences were also seen in ipsilaterally driven responses. It is suggested that there may be at least 2 different classes of ipsilateral fibers. The existence of binocular interaction at the level of the afferent terminal arborizations was investigated, utilizing temporally asynchronous dichoptic stimulation. No such phenomena were seen in curarized Ss. Findings

are discussed in terms of possible velocity and direction sensitivity mechanisms. (38 ref)—*Journal abstract*.

9137. Townsend, R. E.; House, J. F. & Johnson, L. C. (Naval Health Research Ctr, San Diego, CA) **Auditory evoked potential in Stage 2 and REM sleep during a 30-day exposure to tone pulses.** *Psychophysiology*, 1976(Jan), Vol 13(1), 54-57.—Exposed 10 18-23 yr old males to 3.5K Hz tone pulses of 660-msec duration, presented 24 hrs/day for 30 days. The interstimulus interval was 22 sec, and there were 10 days each at 80, 85, and 90 db. The average evoked potential (AEP) at C, referenced to linked mastoids was obtained from contiguous Stage 2 and REM sleep segments on the 1st, 2nd, and last recorded nights of tone exposure. The AEP was consistently larger in Stage 2 than in REM sleep. In both Stage 2 and REM sleep, AEP amplitude on the 2nd recorded night bore no consistent relationship to 1st or last recorded night AEPs. Only the N2-P3 amplitude yielded consistent decreases, with 9 of 10 Ss in both Stage 2 and REM sleep having smaller N2-P3 amplitudes on the last than on the 1st recorded night. There were no changes in latency of any component. (21 ref) —Journal abstract.

9138. Townsend, R. E.; Lubin, A. & Naitoh, P. (Naval Health Research Ctr, San Diego, CA) **Stabilization of alpha frequency by sinusoidally modulated light.** *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 515-518.—2 experiments with a total of 26 male 18-23 yr olds showed that EEG alpha rhythms can be frequency-stabilized by sinusoidally modulated light (SML) but not by photic flash stimulation. It is suggested that this frequency stabilizing effect is not due to superimposition of an evoked response on the background EEG. Instead, SML might phase-lock the scalp-recorded alpha rhythm by influencing subcortical alpha generators within narrow limits set by the inherent resonant EEG frequency. (French summary) (15 ref) Journal summary.

9139. Ur'yash, V. V. (USSR Academy of Medical Sciences, Research Inst of Experimental Medicine, Leningrad) **[Dynamics of gross and spike activity in the cortical striate area in conditions of positive (alimentary) automatic reinforcement.]** (Russ) *Zhurnal Vysshei*

Nervnoi Deyatel'nosti, 1974(Mar), Vol 24(2), 356-361.—Describes the inhibitory effect of alimentary self-reinforcement on the striate area of the cerebral cortex in cats. The effect is due to reorganization in other areas of the feline brain.—L. V. Majovski.

9140. Vinogradova, O. S. & Stafekhina, V. S. (USSR Academy of Sciences, Inst of Biophysics, Pushchino-on-Oka) **[Some properties of dynamics of neuronal activity in the limbic cortex of the rabbit.]** (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 337-346.—Studied some properties of neuronal activity in the cingulate cortex of rabbits during repeated presentation of a series of sensory stimuli. Of the neurones recorded only 17% showed reactions with decremental characteristics, i.e., habituation. More pronounced was the appearance of initially absent reactions, which were observed in over 40% of neurones recorded. Nongraded transformations of the pattern of reactions were analyzed, complicated by background activity. The significance of these data in relation to the role of the limbic system in cerebral recording of information is discussed. (English summary)—L. V. Majovski.

9141. Volynkina, G. Yu. (USSR Academy of Sciences, Pavlov Inst of Physiology, Leningrad) **[Influence of specific and nonspecific afferentation on electrical activity of human articulation muscles.]** (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 328-336.—Studied the effect of proprioceptive and exteroceptive afferentation on the EMG phenomenon of articulation muscles in 120 human Ss during prolonged changes in the emotional states of psychosis and depression. EMG and EEG responses were recorded. Results showed 2 types of recorded responses to afferentation in the EMG of muscular action: (a) reduced magnitude of the EMG oscillations in the proprioceptive state, with an increase in prolonged aftereffect and facilitation under the action of specific recurrent afferentation; (b) increased electrical activity of the articulation muscles, especially in the after-effect of an exteroceptive afferent inflow. Possible mechanisms involved in the organization of EMG phenomena of the articulation muscles are discussed. (English summary) (16 ref)—L. V. Majovski.

9142. Vuillon-Cacciottolo, G.; Balzamo, E. & Naquet, R. (CNRS l'Inst de Neurophysiologie et de Psychophysiologie, Marseille, France) **[Evolution of visual evoked responses during various stages of vigilance in *Papio papio*.]** (Fren) *Brain Research*, 1975, Vol 100(3), 509-521.—Recorded averaged evoked responses (AERs) to light flashes in baboons during wakefulness, slow-wave sleep, and REM periods at the visual cortex, retrocalcarine sulcus, optic tract, lateral geniculate, and pulvinar. A different evoked response was found between the visual cortex and deep structures (except for the optic tract) during SWS and REM. It appears that differentiation and structural responses between the various stages of sleep are greater in the cortex than in the thalamic structures in baboons. (27 ref)

9143. Wallace, Patricia. (Clarion State Coll) **Neurochemistry: Unraveling the mechanism of memory.** *Science*, 1975(Dec), Vol 190(4219), 1076-1078.—Describes current projects being conducted on how the brain stores information, particularly the role of RNA

and protein synthesis in learning. Problems with inhibitor studies are examined, and new methodological approaches to the neurochemistry of memory are outlined.

GSR, EMG, and EEG recordings were made on 15 human Ss.—*L. V. Majovski*.

9151. Eisenberg, Rita B.; Marmarou, Anthony & Giovachino, Patricia. (St Joseph Hosp, Research Inst, Lancaster, PA) **Heart rate changes to a synthetic vowel as an index of individual differences.** *Journal of Auditory Research*, 1974(Jan), Vol 14(1), 45-50.—Presented the synthetic vowel, "ah," at a conversationally loud level, at fixed 90-sec intervals for 30 trials to 2 infants and 2 adults. Heart rate data was collected by cardiachometry. Data suggest that the dynamic curve describing changes in heart rate over time has potential predictive value as an implicit measure of hearing sensitivity that bears upon attentive mechanisms. It seems relatively independent of developmental status and sensitive to individual differences.—*Journal summary*.

9152. Eisenberg, Rita B.; Marmarou, Anthony & Giovachino, Patricia. (St Joseph Hosp, Research Inst, Lancaster, PA) **Infant heart rate changes to a synthetic speech sound.** *Journal of Auditory Research*, 1974(Jan), Vol 14(1), 21-28.—Studied heart-rate responses to a train of 1.16-sec samples of the synthetic vowel "ah" at 60 db. A method was developed for comparing computer-generated distributions of heart rate during 20-sec stimulus onset periods with an equal control period remote from stimulus onset. Data from a 13-day-old infant yield evidence of cardiac deceleration to this stimulus. Data from Ss aged up to 27 yrs show that all age groups, including newborns, exhibited reliable decelerative responses at least 70% of the time; in infants, single-trial changes were in excess of 20 beats/min and persisted for 6 or more sec; in adults, single-trial changes exceeded 10 beats/min. Cardiac deceleration to the synthetic vowel, though seemingly independent of arousal level, was associated with behavioral patterns of arousal and orienting, most frequently with EEG patterns of arousal. Data suggest that speech-like sounds may be processed at relatively high levels of the auditory system. (16 ref)—*Journal summary*.

(Mt Sinai School of Medicine, City U New York) **Neurochemical correlate of body weight in rats.** *Brain Research*, 1975, Vol 96(1), 153-155.—Studied the relationship between feeding behavior and brain levels of catecholamines in 22 female Sprague-Dawley rats. Although no simple relationship between chemical and behavioral measurements was found, a more complex but strikingly consistent correlation between body weight and an index of catecholamine balance was observed. (16 ref)

9157. Glotzbach, Steven F. (Stanford U) **Correlation of hippocampal theta activity and movement during slow-wave sleep in cats.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 485-490.—Hippocampal EEG, muscle tonus, and body movement were recorded during slow-wave sleep in 5 female cats. A consistent correlation was seen between body movement and a change in the hippocampal EEG from large amplitude irregular activity to theta activity. Occasionally synchronization of the hippocampal waveform also accompanied changes in muscle tonus in the absence of movement. Results are discussed in terms of recent theories of the significance of the theta rhythm and its possible implications in hippocampal function. (16 ref)—*Journal abstract*.

9161. Krynicki, Victor. (Columbia U) **Time trends and periodic cycles in REM sleep eye movements.** *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 507-513.—Analyzed linear and quadratic trends in eye movements during REM sleep episodes in 16 undergraduates. REM episodes were grouped in 4 categories according to their length: 11.0-21.3, 21.7-29.7, 30.0-42.3, and 42.7 min or longer. 8 episodes had a significant linear trend, 10 a quadratic trend, 7 had both trends, and 12 had no trend. In general, a subsequent spectral analysis revealed the dominant presence of a slow cycle (10-30 min) which varied according to the length of the REM episode. The presence of slow cycles was significant in REM episodes except for those in the 21-30 min range. For episodes of presleep wakefulness (about 2 hrs each), a dominant slow cycle was found. Results suggest a similarity in the periodic organization of eye movements during REM sleep and waking. Data also indicate that an ultradian (70-150 min) cycle was present in eye movements during sleep and waking. The finding of a decrease in eye movements before sleep onset, coupled with previous reports of an increase in eye movement after sleep onset, suggest the presence of a circadian cycle. (Czechoslovak Academy of Sciences, Inst of Physiology, Prague) **Labelling of TCA-soluble fraction and protein of the rat visual cortex after learning a pattern discrimination task.** *Experientia*, 1975, Vol 31(9), 1042-1044.—Performed experiments to determine whether discrimination learning would cause a difference in the labeling of protein in the visual hemicortex of the rat. Male hooded rats were taught a vertical-horizontal discrimination, monocularly. After various time intervals the trained rats were sacrificed and protein content and radioactivity of both visual hemicortices were analyzed. The group sacrificed 15 min after ¹⁴C-leucine administration had significant elevation of protein labeling in the visual cortex contralateral to the trained eye. However, radioactivity in the trichloroacetic acid-soluble fraction dropped significantly. Results indicate that visual discrimination training is followed by a redistribution of protein radioactivity between trained and control visual hemicortices, while labeling of the soluble fraction appears to be unaffected. 9166. Palmblad, Jan et al. **Experimentally induced stress in man: Effects on blood coagulation and fibrinolysis.** *Reports from the Laboratory for Clinical Stress Research*, 1975(Nov), No 42, 9 p.—Exposure of 16 healthy human females, age 23-44 yrs, to a moderately stressful 77-hr vigil under strictly controlled conditions was accompanied by hormonal reactions compatible with a stress reaction. The stressor procedure included performance on a specially designed shooting range, firing an electronic rifle at small targets fitted with photo diodes. An authentic battle noise from a tape recorder was amplified to a level of 95 db. After an unabated 2 1/2 hrs of such military activity and exposure, there followed a concentrated 15-min period for answering questionnaires, ingesting a meal, voiding urine for analysis, etc. In this manner the experiment was continued for 3 days without rest or sleep. Blood coagulation factors and fibrinogen decreased during the vigil, and only the latter returned to normal values within 5 days. (31 ref)—*Journal summary*.

9179. Plotkin, William B. & Cohen, Robin. (U Colorado) **Occipital alpha and the attributes of the "alpha experience."** *Psychophysiology*, 1976(Jan), Vol 13(1), 16-21.—Studied the extent to which occipital alpha strength is related to 5 subjective dimensions associated with the "alpha experience": (a) the degree of oculomotor processing, (b) the degree of sensory awareness, (c) the degree of body awareness, (d) the deliberateness of thought, and (e) the pleasantness of emotional state. One experimental group of 8 undergraduates was run for each of the above 5 dimensions. First, while an integrated amplitude measure of occipital alpha strength was recorded, Ss practiced 2 "simple awareness techniques" (without feedback) corresponding to the 2 poles of the group's dimension. Ss were then given the task of associating their 2 awareness techniques with occipital alpha strength by means of feedback-augmented alpha enhancement and suppression. Results show that only the 1st 2 dimensions, the degree of oculomotor processing and the degree of sensory awareness, were significantly related to occipital alpha strength. Findings support the notion that the alpha experience as a whole is not intrinsically or directly associated with enhanced occipital alpha strength and that occipital alpha strength is a direct function of only oculomotor processing. (U Southampton, England) **Effects of "below-zero" habituation on the electrodermal orienting response to a test stimulus.** *Psychophysiology*, 1976(Jan), Vol 13(1), 10-15.—Conducted 2 experiments with a total of 90 undergraduates to investigate the effect of below-zero habituation training on skin conductance response (SCR) amplitude to a change in auditory stimulus frequency. In both experiments, Ss were trained with a 1,000 Hz tone until zero responding and then received 5, 10, or 15 further training trials. In Exp I, Ss then received 1 presentation of a test stimulus of 1,400 Hz, while in Exp II, the test stimulus was a tone of 670 Hz. On the basis of dual-process theory, it was hypothesized that response amplitude to the test stimulus would be inversely related to amount of below-zero training. However, results of both experiments indicate that SCR amplitude was positively related to amount of below-zero training. Data suggest that in situations of extended habituation training, an expectancy or subjective probability of stimulus occurrence gradient is important in determining response amplitude to a test stimulus. Unité de Recherches sur le Cerveau, Belgium) **Existence of a mutual tonic inhibitory interaction between the preoptic hypnogenic structure and the midbrain reticular formation.** *Brain Research*, 1975, Vol 96(1), 71-75.—Electrophysiological experiments with encéphale isolé cats support the conclusions that (a) electrical stimulation of the mesencephalic tegmentum (MT) bilaterally evokes an inhibitory P wave in the hypnogenic area of the basal preoptic forebrain; (b) electrolytic transection of the MT results immediately in an intense and lasting activation of the same hypnogenic area; (c) slow-wave sleep of the intact encéphale isolé is associated with a similar, although less intense, activation of the hypnogenic area; (d) the preoptic activation which follows mesencephalic transection is strongly reduced by light. It is suggested that the induction of slow-wave sleep and its maintenance can be explained by an imbalance between the cerebral antagonistic influences of the arousal hypnogenic systems.—*L. (U Colorado) **An investigation of behavioral characteristics of rats developed from senile ova.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 497-504.—Attempted to determine whether behavioral handicaps result in rats when fertilization occurs late in the life of the ova. Female Sprague-Dawley rats were mated so that fertilization occurred near ovulation or approximately 6 hrs afterward. Although late-mated Ss showed more rejection of the male than controls, there was no significant difference in the probability of becoming pregnant given that copulation occurred. Measures of maternal activities during gestation and the maternal care period revealed no differences between 8 late-mated and 8 control Ss; 34 measures of offspring behavior in the home cage and standard learning apparatuses showed no consistent group differences.—*Journal abstract.*

9192. Pepeu, G.; Garau, L.; Mulas, M. L. & Marconcini-Pepeu, I. (U Florence, Medical School, Italy) **Stimulation by morphine of acetylcholine output from the cerebral cortex of septal rats.** *Brain Research*, 1975, Vol 100(3), 677-680.—Data from septally lesioned anesthetized male Wistar rats show that morphine (10 mg/kg subcutaneously) can increase acetylcholine output from the cerebral cortex. It is suggested that morphine has an indirect action on the activity of cortical cholinergic neurons and that the septal area may play a role in this effect which is unrelated to antinociception. (21 ref)

9193. Rowland, Neil E. & Antelman, Seymour M. (U Pittsburgh) **Stress-induced hyperphagia and obesity in rats: A possible model for understanding human obesity.** *Science*, 1976(Jan), Vol 191(4224), 310-312.—24 adult female Sprague-Dawley rats were assigned to 1 of 3 experimental conditions: (a) intact, (b) ovariectomized and injected daily with 1 µg of estradiol benzoate, or (c) ovariectomized. 3 Ss from each of these groups received 6 daily tail pinch sessions in the presence of sweetened milk. All pinched Ss became hyperphagic and obese. When obesity was clearly evident, pinched Ss tended to become satiated earlier in a given session and were inclined to become agitated and spill milk when pinching persisted. Results demonstrate for the 1st time that a chronic nonspecific stress is capable of inducing and sustaining clear-cut hyperphagia and weight gain in the rat. Involvement of the nigro-striatal dopamine system in the behavior caused by tail pinching is noted, and parallels are drawn with altered affective states in obese humans.—*L. Gorsey.*

9202. Berdashkevich, A. P. (USSR Academy of Sciences, Inst of Information Transmission Problems, Moscow) [Locomotor form of hypothalamic self-stimulation in rats.] (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 400-406.—Studied the effect of cerebral self-stimulation on 14 white rats' motor behavior controlled by the hypothalamic region. A series of stimuli was delivered for pressing the pedal and for running over a wheel. The experimental paradigm was set as follows: the fewer the number of pedal pressings or the shorter the running period required for receiving the next series, the higher the frequency of self-stimulation. When Ss received brain stimulation for running, they

more frequently discontinued the stimulation as current intensity increased, thereby speeding up the running. Ss learned to lengthen the self-regulated series over trials. The average rate of running and number of pedal pressings always increased as current intensity rose. These data are considered with those from other studies which suggest that self-stimulation of the brain alters the S's rhythm of motor behavior. (English summary) (34 ref)—L. V. Majovski.

9203. Carter, David A. & Phillips, Anthony G. (U British Columbia, Vancouver, Canada) Intracranial self-stimulation at sites in the dorsal medulla oblongata. *Brain Research*, 1975, Vol 94(1), 155-160.—15 of 42 male Wistar rats with electrodes in the dorsal medulla displayed intracranial self-stimulation (ICS) behavior at ranges ranging from 64/15 min to 573/15 min. The successful elicitation of ICS in a brain region previously found negative for ICS is most likely due to procedural differences. A ventral noradrenergic bundle hypothesis of brain stimulation reward is suggested. (43 ref)

9207. Klemm, W. R. & Dreyfus, L. R. (Texas A&M U) Septal- and caudate induced behavioral inhibition in relation to hippocampal EEG of rabbits. *Physiology & Behavior*, 1975(Nov), Vol 15(5), 561-567.—Examined behavioral inhibition in 15 New Zealand White rabbits by comparing low- and high-frequency electrical stimulation of the septum and the caudate nucleus on 3 measures of unlearned activity, a discriminative active avoidance task, and a leverpress operant task. Four and 8/sec stimulation of either site evoked a sustained

rhythmic discharge in the hippocampus morphologically similar to naturally occurring theta rhythm. At 100/sec, the EEG was persistently desynchronized by septal stimulation and generally unaffected by caudate stimulation. Septal stimulation at all frequencies caused massive increases in exploratory activity in some Ss but had no clear effect on jiggle stand activity or on duration of immobility reflex (animal hypnosis) compared to that of 6 controls. Both septal and caudate stimulation inhibited previously learned avoidance and operant behavior, and these effects were frequency specific occurring at low, but not high, stimulus frequencies. Caudate stimulation also inhibited jiggle stand activity and exploration, and enhanced the immobility reflex. (29 ref)—*Journal abstract*.

(CNRS, Laboratoire de Physiologie nerveuse, Gif-sur-Yvette, France) Kindling effect and sleep organization in cats. *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 449-454.—Compared sleep organization in 7 kindled cats and 4 controls. Longitudinal observation during 5 hrs of polygraphic recording continued every day at the beginning, irregularly after kindling, for 1 yr. During kindling installation, REM sleep was gradually reduced after each stimulation. When the kindling phenomenon was established, each stimulation triggered a typical generalized convulsion, and diminution of REM sleep persisted. Total amount, duration of episode, and frequency of REM sleep decreased after each stimulation. Increase of the awake stage was also observed after each stimulation. These data are compared with other reports on sleep organization after generalized convulsions or temporal lobe epilepsy in animals and man. (French summary) (20 ref)—*Journal summary*.

9215. Tevzadze, V. G. (Georgian State Inst of Physical Culture, Tbilisi, USSR) [Formation of temporary connections by direct electrical stimulation of different brain structures.] (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 287-291.—Studied the effect of direct electrical stimulation of the neocortex and the caudate nucleus on the conditioned motor reflexes in 8 dogs. The technique of EEG microelectrode implantation is described in detail in an effort to account for the formation of temporary connections (a) when stimulation of the visual cortex precedes as a conditioned signal and (b) when stimulation of the caudate nucleus precedes that of the motor cortex. Results show that direct stimulation produced "closing" of temporary connections under specified conditions in the ascending and descending connection fibers. The data suggest further that closing of temporary connections may also take place at the level of the caudate nucleus. (English summary) (17 ref)—L. V. Majovski.

9216. Wagner, H. Ryan; Feeney, Dennis M.; Gullotta, Frank P. & Cote, Ila L. (U New Mexico) Suppression of cortical epileptiform activity by generalized and localized ECoG desynchronization. *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 499-506.

Studied the effects of high frequency electrical stimulation of both diffusely projecting brain regions and regions of more restricted projection on penicillin-induced cortical epileptiform focal activity in 13 adult cats. Effects were contingent on the level of focal activity at the time of stimulation. Very active foci (spike rates above 0.5/sec) were uniformly driven by stimulation of

all structures. Foci exhibiting weak to moderate levels of activity were inhibited both during and following stimulation. Episodes of spike suppression induced through stimulation of diffusely projecting structures were typically followed by an intensified "rebound" of interictal activity, although episodes induced through stimulation of regions of limited projection were not. This effect was most apparent with caudate stimulation and motor cortex foci. Results are discussed in terms of the interaction between naturally occurring brain rhythms in sleep and arousal with the epileptic process. (French summary) (45 ref)—*Journal summary*.

(U California, Riverside) **Behavioral measurement of the post-stimulation excitability of neurons mediating self-stimulation by varying the voltage of paired pulses.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 435-447. —Compared 3 different behavioral methods for estimating the refractory periods of the directly stimulated neurons mediating self-stimulation in 3 implanted, freely behaving male Sprague-Dawley rats. The simplest method, observing the barpressing rate as the interval between paired pulses was varied, yielded systematically shifting refractory period estimates which depended on the voltage chosen. Voltage threshold methods were more useful but depended on 2 tenuous scaling assumptions. A frequency threshold measure proposed by the 1st author (in press) was better able to meet these scaling criticisms. This method establishes a more sound theoretical basis for quantitative measurement of excitability changes in the directly stimulated neurons mediating stimulation-elicited behaviors. (Purdue U) **Distractibility and reactivity under different response conditions following hippocampal lesions in the rat.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 479-484. —Male Holtzman rats with dorsal hippocampal lesions were compared with sham-operated controls ($N = 42$) on measures of responsiveness to a distracting stimulus that was presented under 3 conditions of ongoing operant or consummatory activity. The distractor was a compound auditory-visual stimulus delivered twice in each of 3 daily sessions, in each instance following (a) the 2nd response of an FR sequence, (b) the 6th response of an FR sequence, or (c) 5 min of licking for sucrose solution. The duration of distraction was lower among lesioned Ss under all 3 response conditions and lower for both groups under the latter 2 conditions than under the 1st. The lesion effect was more pronounced as a reduction in exploration following distraction than as a reduction in orienting activity. In a subsequent test, tentative evidence was obtained for a lesion-induced decrement in dishabituation. (18 ref)—*Journal abstract*.

9229. Ibuka, Nobuo & Kawamura, Hiroshi. (Mitsubishi-Kasei Inst of Life Sciences, Tokyo, Japan) **Loss of circadian rhythm sleep-wakefulness cycle in the rat by suprachiasmatic nucleus lesions.** *Brain Research*, 1975, Vol 96(1), 76-81. —Studied the effects of bilateral suprachiasmatic nucleus (SCN) lesions as well as bilateral enucleation on the sleep-wakefulness cycle in male albino rats. After SCN lesions, the most significant

change observed was the abolition of the difference in the amount of total sleep (slow-wave plus paradoxical sleep) between light and dark hours. However, immediately after recovery from anesthesia, circadian rhythm of the sleep-wakefulness cycle was completely eliminated after SCN lesions and lasted without change for up to 63 days recording period. There was no apparent change in the proportion of paradoxical sleep to total sleep. In enucleated Ss, the circadian sleep rhythm, although attenuated, was still evident in the 1st 2 wks. It is concluded that SCN represents an effective control mechanism for circadian rhythm in the rat in sleep and wakefulness, presumably functioning as a biological clock; however, this clock only regulates the distribution of sleep within a day since no specific influence on paradoxical sleep or the total amount of sleep was observed.—L. Gorsey.

(USSR Academy of Sciences, Pavlov Inst of Physiology, Leningrad) [The role of caudate nuclei in the formation and extinction of avoidance reactions in rats of different age.] (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 272-278.—Studied the effect of electrolytic ablation on the caudate nucleus of rats of different ages in order to determine the nature of formation and extinction of avoidance reactions in the striate cortical structures. Experiments were carried out on a group of Ss 2-4 mo old and a 2nd group 6-12 mo old. In the young Ss, whose cholinergic systems were cerebrally underdeveloped, lesions disturbed the formation of a conditioned avoidance reaction. In the older Ss, whose cholinergic systems were cerebrally well developed, lesions did not substantially affect the formation of the CR, but did impede extinction on the avoidance reaction. Findings are discussed in relation to the role of the cholinergic brain pathways involved in the extinction processes. (English summary)—L. V. Majovski.

Those Ss who received sulpiride reduced their resistance to change in perception significantly more than placebo Ss. Some time elapsed before reaching an optimal level of perceptual change, supporting an interpretation that the drug serves as a filter of inhibition exchange.—L. L'Abate.

9243. Aprison, M. H.; Hingtgen, J. N. & McBride, W. J. (Indiana, U, Medical Ctr, Inst of Psychiatric Research) **Serotonergic and cholinergic mechanisms during disruption of approach and avoidance behavior.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1813-1822.—A review of recent studies indicates that injection of 5-hydroxytryptophan (5-HTP) into pigeons and rats working on approach schedules produce a period of behavioral depression that is temporally correlated to increased levels of total 5-hydroxytryptamine (5-HT; serotonin) in the telencephalon and diencephalon. Administration of alpha-methyl-meta-tyrosine (AMMT) also results in depressed responding; however, the temporal correlation is with decreased levels of total 5-HT in brain. The hypothesis presented to explain these 2 apparent opposite biochemical states which result in similar behavioral disruptions is that in both cases more 5-HT is released within certain key serotonergic synapses mediating this behavior. Evidence from subcellular studies supports this concept. Another series of studies has indicated that acetylcholine may play a role in excitation during avoidance behavior. Behavioral excitation observed following administration of tetrabenazine 18 hrs after iproniazid pretreatment to rats working on shock-avoidance schedules was temporally correlated with lowered levels of acetylcholine in the telencephalon. Pretreatment with 0.8 mg/kg of atropine blocked excitation whereas % of this dose increased the duration. Mechanisms to explain these neurochemical correlates of behavior are discussed. (32 ref)—*Journal abstract*.

9244. Ashford, J. R. & Cobby, J. M. (U Exeter, England) **Drug interactions: The effects of alcohol and meprobamate applied singly and jointly in human subjects: III. The concentrations of alcohol and meprobamate in the blood and their effects on performance—application of mathematical models.** *Journal of Studies on Alcohol*, 1975(Nov), Suppl No 7, 140-161.—The relations between the levels of alcohol and meprobamate in the blood and performance on a visual-motor coordination tracking task were analyzed by a general system of mathematical models, using data from the 5th of a series of experiments conducted by J. A. Carpenter, R. J. Gibbins, and J. A. Marshman (see PA, Vol 55:Issue 5). The derivation of the models is described. In general, the relationship between blood alcohol concentration (BAC) and performance was nonmonotonic; best performance occurred at BACs of 10-20 mg/100 ml. The relationship between meprobamate concentration (BMC) and performance was monotonic; performance deteriorated with increasing BMC. The results of the reaction latency measure, however,

showed no consistent relationship with BAC or BMC. The action of alcohol can be represented by a model which involves 2 distinct sites of action; that of meprobamate, 1 site. It could not be determined whether the site of action of meprobamate is distinct from those of alcohol because the blood levels of the drugs were not high enough. Implications of the results are discussed, with particular reference to the quantitative description of the joint action of drugs and the design of future experiments.—*Journal summary*.

9246. Baldessarini, R. J.; Walton, K. G. & Borgman, R. J. (Harvard U, Medical School, Psychiatric Research Lab, Boston) **Esters of apomorphine and N,N-dimethyldopamine as agonists of dopamine receptors in the rat brain in vivo.** *Neuropharmacology*, 1975(Oct), Vol 14(10), 725-731.—Subcutaneous injections of O,O'-diacetylapomorphine, at doses of .1-10.0 mg/kg, produced stereotyped gnawing behavior in male albino Sprague-Dawley rats, indistinguishable from that induced by apomorphine. The dose-response relationship and time course of this effect were similar for the 2 drugs, although the ester appeared to be more potent and longer-lasting at higher doses. While apomorphine had no behavioral effects when given orally at doses up to 100 mg/kg, diacetylapomorphine produced discernible stereotypy at oral doses as low as 10 mg/kg. The injection of diacetylapomorphine into Ss previously lesioned electrophoretically in the left nigro-striatal tract provoked turning behavior toward the side contralateral to the lesions, with an effectiveness similar to that of apomorphine. Apomorphine, but not diacetylapomorphine, stimulated the production of cyclic adenosine monophosphate (AMP) when incubated with homogenates of corpus striatum. N,N-dimethyldopamine, but not its ester, also stimulated cyclic AMP production in homogenates. Results support the conclusion that catechol esters of certain structural analogs of dopamine can be hydrolyzed in vivo to yield free catechols capable of stimulating central dopamine receptors. discharges. *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 491-497. Following parenteral administration of subconvulsive levels (10 mg/kg, ip) of pentyleneetetrazol (Metrazol), photic stimulation induced an augmented rhythmic sequence of late neuron population burst-inhibition periods in the dorsal lateral geniculate nucleus (LGN) of 5 male albino Holtzman rats. This late bursting-inhibition activity was associated with the augmentation of cortically recorded photically evoked afterdischarges (PhADs). Multiple-unit activity (MUA) was also recorded from superior colliculus (SC), reticular formation (RF), posterior thalamic area (PTN), and dorsal hippocampus. Only SC and RF exhibited an initial discharge to photic stimulation with late bursting infrequently observed and only in the SC. PTN showed some tonic increases in MUA following photic stimulation. Hippocampus MUA was unaffected by photic pulse stimulation. Results document the neuronal role of the LGN in PhAD activity, and are discussed in terms of a recurrent LGN inhibitory system governing cortical PhAD production and elaboration. 9253. **Burov, Yu. V. & Speranskaya, N. P.** (USSR Academy of Medical Sciences, Inst of Pharmacology, Moscow) [Analysis of neurochemical mechanisms of one form of intraspecies behavior.] (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Mar), Vol 24(2), 301-305.—Studied the neurochemical mechanisms of central M-cholinergic and α -adrenergic structures and how they affect the formation and achievement of the avoidance reaction of 1 rat to the stimulation of its host partner. Drug dosage levels, neuropharmacology agents tested, and the experimental paradigm used, are described in detail. Ss were 93 white male rats weighing 270-300 g. The M-cholinergic agents (e.g., amizyl and atropine, and α -adreno inhibitor phentolamine) depressed avoidance reaction to pain stimulation of the partner. N-cholinergic agents (e.g., aprophene. B-adreno-inhibitor dichloriso-proterenol, M- and D-antagonist of serotonin, morphine, and LSD) all in doses eliciting corresponding central effects, did not influence avoidance reactions. (English summary) (19 ref)—*L. V. Majovski*.

9254. **Cappell, Howard & LeBlanc, A. E.** (Addiction Research Foundation, Toronto, Canada) **Conditioned aversion by amphetamine: Rates of acquisition and loss of the attenuating effects of prior exposure.** *Psychopharmacologia*, 1975, Vol 43(2), 157-162. Conducted 2 experiments with a total of 174 male Wistar rats to determine some of the limiting conditions of the aversion to saccharin caused by amphetamine. In Exp I chronic treatment with 7.5 mg/kg of amphetamine was administered for 0, 1, 5, or 20 days prior to pairing saccharin with an ip injection of 1.0 mg/kg of dextroamphetamine sulphate. Results indicate that between 5 and 20 days of treatment were necessary for the treatment to be effective in attenuating conditioned aversion. In Exp II Ss were withdrawn from treatment with 20 mg/kg of amphetamine for 1, 7, or 14 days prior to conditioning

trials with 1.0 mg/kg of amphetamine. The prior treatment lost its effectiveness in attenuating conditioned aversion between 7 and 14 days after withdrawal. Although alternative explanations are possible, the time intervals required for acquisition and loss of effectiveness of prior treatment are consistent with the hypothesis that tolerance is the mechanism underlying the observed effects.—*Journal abstract*.

9255. **Carpenter, J. A.** (Rutgers State U, Ctr of Alcohol Studies) **Drug interactions: The effects of alcohol and meprobamate applied singly and jointly in human subjects.** *Journal of Studies on Alcohol*, 1975(Nov), Suppl No 7, 193 p.

9256. **Carpenter, John A.; Gibbins, Robert J. & Marshman, Joan A.** (Rutgers State U, Ctr of Alcohol Studies) **Drug interactions: The effects of alcohol and meprobamate applied singly or jointly in human subjects: II. Five experiments.** *Journal of Studies on Alcohol*, 1975(Nov), Suppl No 7, 54-139.—Studied the effects of alcohol and meprobamate, administered singly and in combination, at doses up to 1.20 g of alcohol per kg of body weight and up to 30 mg of meprobamate per kg. Ss were 158 21-49 yr old males. 5 behavioral measures were obtained: Targets Missed, Errors, Targets Missed plus Errors, Reaction Latency, and a composite Statistic. The 5 measures generally produced similar results within a single experiment; Errors was least affected by the drugs. The worst performance occurred after the higher doses of the drugs in combination. The effects of the drugs were evident 1.5 hrs after beginning to drink, changed with time either for better or worse and were greatest toward the last quarter of the experimental session. It is concluded that the prolonged administration of meprobamate had an ameliorating effect on alcohol-produced changes in behavior and that a single dose increased the absorption of alcohol. (33 ref)—*Journal summary*.

9257. **Carpenter, John A.; Marshman, Joan A. & Gibbins, Robert J.** (Rutgers State U, Ctr of Alcohol Studies) **Drug interactions: The effects of alcohol and meprobamate applied singly and jointly in human subjects: Theoretical considerations and literature review.** *Journal of Studies on Alcohol*, 1975(Nov), Suppl No 7, 1-53.—Reviews research on the effects of alcohol and meprobamate and their interactions, including behavioral and pharmacological studies and studies of the interaction of alcohol with other drugs. It is argued that the task of characterizing the relation between the drug and response is formidable because complex physiological and biochemical processes determine the relationship between administered and effective dose and are further complicated by route of drug administration and various time relations. Much of the behavioral research assumes that a single dose is representative of all doses of the drug, and that combinations of the drugs and additivity of effects can be determined without a rigorous definition or means of application. (249 ref)—*Journal summary*.

9258. **Cohn, Major L. & Cohn, Marthe.** (U Pittsburgh Medical School, Magee-Womens Hosp) **Barrel rotation induced by somatostatin in the non-lesioned rat.** *Brain Research*, 1975, Vol 96(1), 138-141.—In rats, 5-10 μ g of somatostatin decreased locomotor activity to the point of

cataplexia and higher doses (25-50 μ g) induced an unusual rotational behavior never reported: Ss rolled in a "barrel" fashion for 30 min in a left-handed direction only. It is suggested that thyrotropin releasing factor and somatostatin regulate behavior by maintaining a constant balance between dopaminergic and cholinergic systems.

9259. Cohn, Major L.; Cohn, Marthe & Taylor, Floyd H. (U Pittsburgh Medical School, Magee-Womens Hosp) **Thyrotropin releasing factor (TRF) regulation of rotation in the non-lesioned rat.** *Brain Research*, 1975, Vol 96(1), 134-137.—Studied a previous finding of M. L. Cohn (1975) that in non-lesioned rats pretreated with drugs known to alter dopamine mediated activity in the brain (e.g., apomorphine and amphetamine), thyrotropin releasing factor (TRF) induced tight head-to-tail rotations on a flat surface. Results of a similar study show that TRF regulates locomotor activity through the dopaminergic pathway, thus linking for the first time a hypothalamic hormone to a neurotransmitter system.

9260. Cook, Leonard & Sepinwall, Jerry. (Hoffmann-La Roche, Research Div, Nutley, NJ) **Reinforcement schedules and extrapolations to humans from animals in behavioral psychology.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1889-1897.—Reviews data on the types of schedules of reinforcement that best measure the behavioral effects of 3 classes of psychotherapeutic drugs (neuroleptics, antidepressants, and anti-anxiety agents). The question of whether conditioned avoidance techniques are relevant predictors of antipsychotic efficacy is discussed in relation to thioridazine and clozapine. Other findings suggest that there is a correlation between clinical imipramine-like antidepressant activity and the ability of a compound to increase observing response rates in pigeons, while being ineffective in blocking conditioned avoidance responses. The validity of the conflict model commonly used in studying the behavioral effects of anti-anxiety drugs is discussed with reference to 3 parameters: the minimum effective anticonflict dose, the ranges of doses across which anticonflict activity can be maintained, and the dose at which VI responding is decreased. The usefulness of rate dependent approaches and multiple or concurrent schedules is discussed in relation to findings from recent studies that demonstrate that the 1st administration of a drug produces different response effects than repeated treatments. Limitations of the conditioned emotional response procedure as a model for human anxiety and fear are also discussed. (54 ref)—L. Gorsev.

9262. da Prada, M. et al. (F. Hoffmann-La Roche, Research Div, Basel, Switzerland) **Lysergic acid diethylamide: Evidence for stimulation of cerebral dopamine receptors.** *Brain Research*, 1975, Vol 94(1), 67-73.—In male albino rats, LSD (.2 mg/kg ip) decreased the striatal and retinal content of homovanillic acid. LSD did not change the level of dopamine (DA), but delayed the alpha-methylparatyrosine-induced disappearance of this amine in the telencephalon. In the cat, LSD diminished the DA output into the perfusate of the

caudate nucleus. LSD also increased the activity of adenylate cyclase in striatal homogenates of rat. Findings indicate that in the CNS, LSD stimulates DA receptors which may be involved in LSD-induced psychosis. (38 ref)—*Journal abstract.*

9264. Eckardt, Michael J. (VA Hosp, Psychobiology Research Lab, Sepulveda, CA) **The role of orosensory stimuli from ethanol and blood-alcohol levels in producing conditioned taste aversion in the rat.** *Psychopharmacologia*, 1975, Vol 44(3), 267-271.—Used a taste-aversion paradigm with 55 female Sprague-Dawley albino rats to demonstrate that aversive consequences accompany the rapid oral ingestion of 5% (v/v) ethanol solutions. The learned taste aversion resulted from 5 10-min self-administrations of alcohol mixed with an originally preferred flavor at a dosage of 1.69 gm alcohol/kg body weight/day. In contrast, when the consumption of the alcohol solution was distributed throughout the day, a conditioned aversion was not obtained. This outcome was observed even though the distributed-drinking Ss were exposed to more orosensory stimuli and ingested more grams/kilogram than the 10-min Ss. The observation that those Ss that drank their daily fluid in 10 min demonstrated higher peak blood-alcohol levels than the distributed Ss supports the conclusion that a centrally mediated aversive state of inebriation must be present to produce a conditioned aversion.—*Journal abstract.*

9265. Estler, C. J. (U Erlangen-Nürnberg, Erlangen, W Germany) **Influence of phenoxybenzamine on methamphetamine-induced changes in locomotor activity, oxygen consumption, body temperature and some metabolic parameters.** *Neuropharmacology*, 1975(Oct), Vol 14(10), 779-783.—Studied the effects of phenoxybenzamine on methamphetamine-induced changes of locomotor activity, oxygen consumption, body temperature, and brain glycogen in female NMRI mice. Results suggest that phenoxybenzamine-sensitive alpha-adrenergic receptors play no decisive role in methamphetamine-induced motor excitation, hypothermia, and cerebral glycogenolysis.

9266. Evans, Hugh L.; Laties, Victor G. & Weiss, Bernard. (U Rochester, Medical & Dental School) **Behavioral effects of mercury and methylmercury.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1858-1867.—Notes that intoxication by elemental mercury or by methylmercury is revealed primarily by changes in behavior and by neurological signs. Disorders of movement and posture have been most widely reported, both in animals and humans. Specific sensory symptoms are also prominent in human methylmercury poisoning. Recent data indicate similar symptoms in monkeys during long-term exposure to methylmercury. Variations in the profile of behavioral and neurological effects are discussed in terms of differences in species and differences between acute and long-term exposure. The latter condition poses the most difficult questions for human health, yet has been less frequently studied. Procedures are suggested that may help to resolve these problems

(e.g., tests of learned behavior). (55 ref)—*Journal abstract*.

9267. Florio, V.; Bianchi, L. & Longo, V. G. (Istituto Superiore di Sanità, Rome, Italy) **A study of the central effects of sympathomimetic drugs: EEG and behavioural investigations on clonidine and naphazoline.** *Neuro pharmacology*, 1975(Oct), Vol 14(10), 707-714.—Studied the effect of ip clonidine and naphazoline on the EEG and behavior of 18 male albino rats, 8 rabbits, and 3 cats and the modifications of these effects by alpha-adrenergic drugs and other compounds acting on the sympathetic system. Clonidine (.05–.2 mg/kg in rats, .025–.4 mg/kg in rabbits, and .025 and .05 mg/kg in cats) and naphazoline (.025 mg/kg in rabbits, up to .2 mg/kg in cats) induced behavioral depression and EEG synchronization in all species. These effects were prevented by tolazoline, phentolamine (both drugs given in doses of 2 and 10 mg/kg in rats and rabbits), and yohimbine (.5 mg/kg for all Ss), but not by phenoxybenzamine (2 and 10 mg/kg in all Ss). Pretreatment with alpha-methylparatyrosine (100 mg/kg/day for 3 days in rats only) was only partially effective in preventing EEG synchronization caused by clonidine. Reserpine (2 mg/kg in rats only) had no effect. Amphetamine (1 or 2 mg/kg) reversed the effects of clonidine, while clonidine attenuated the behavioral and EEG changes caused by amphetamine. Data suggest that clonidine and naphazoline induce sedation and EEG synchronization by stimulation of central alpha-adrenergic receptors. (16 ref)—*Journal abstract*.

9268. Frankel, David; Khanna, Jatinder M.; LeBlanc, A. Eugene & Kalant, Harold. (U Toronto, Canada) **Effect of p-chlorophenylalanine on the acquisition of tolerance to ethanol and pentobarbital.** *Psychopharmacologia*, 1975, Vol 44(3), 247-252.—Male Wistar rats were rendered tolerant to ethanol or pentobarbital by daily oral administration. Motor impairments after test doses of ip ethanol or pentobarbital were measured prior to and at various times during chronic treatment in order to assess the degree of tolerance development. Chronic administration of para-chlorophenylalanine (PCPA) in a dosage regimen which produced and maintained approximately 95% depletion of brain serotonin (5-HT) did not alter motor impairment after initial acute administration of ethanol or pentobarbital. However, the rate of tolerance development to the motor-impairing effects of both drugs was slowed down in PCPA-treated Ss. PCPA did not appear to exert this effect by altering the disposition of ethanol or pentobarbital, since blood levels determined 20 min after administration of the test doses were similar in Ss treated with PCPA and in controls. Findings suggest that brain 5-HT may have a role in tolerance development to ethanol and pentobarbital. (29 ref)—*Journal abstract*.

9269. Gentil, V.; Greenwood, M. H. & Lader, M. H. (U London, Inst of Psychiatry, England) **The effect of adrenaline on human platelet MAO activity.** *Psychopharmacologia*, 1975, Vol 44(2), 187-190.—Assessed MAO platelet activity before and after the subcutaneous administration of adrenaline (14.3 µg/kg) to 9 healthy volunteers. Significant increases were found 15 min and 1 hr after adrenaline in the enzymatic activity with benzylamine acting as substrate. Increases were also

found in all but 2 samples in the activity towards tyramine substrate. Such increases may be part of a general response to "stress," and, if so, need to be taken into account when interpreting changes in platelet MAO activity in psychiatric patients. (27 ref)—*Journal abstract*.

9270. Ghoneim, M. M. & Mewaldt, S. P. (U Iowa) **Effects of diazepam and scopolamine on storage, retrieval and organizational processes in memory.** *Psychopharmacologia*, 1975, Vol 44(3), 257-262.—Studied the effects of intramuscular injections of diazepam (0.3 mg/kg) and scopolamine (8 µg/kg) on memory processes and subjective moods in 36 19-27 yr old paid students. Ss were tested in groups of 4 in a double-blind procedure. Lists of words were presented to Ss who were then tested with an immediate free-recall test prior to drug administration. Following injection delayed free recall and recognition tests were given. Subsequently 2 sets of lists were presented separately and tested in the same fashion. Two of the lists in the last set were composed of words falling into distinct categories. Memory was analyzed by testing immediate recall of digit sequences and employing a visual recognition test. Subjective moods were evaluated with a rating questionnaire. Both diazepam and scopolamine impaired memory functions although the action of the latter drug was more pronounced and prolonged. The deficit appeared to be in the storage process leaving retrieval processes unaffected. Scopolamine interfered with organizational processes and produced a larger sedative effect than diazepam. 9272. Hanson, Harley M. (Merck Inst for Therapeutic Research, West Point, PA) **Psychophysical evaluation of toxic effects on sensory systems.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1852-1857.—Toxic effects on sensory systems have rarely been evaluated by psychophysical methods. As examples of possible applications, 4 studies are described. Sodium salicylate and kanamycin, both reported to produce hearing deficits in man, were demonstrated to affect auditory thresholds in monkeys. With the latter drug the deficits measured were correlated with specific loss of receptor cells in the cochlea. Pheniprazine, known to induce red-green color blindness, disrupted a wavelength discrimination in pigeons. Trans-11-amino-10,11-dihydro-5-(3-dimethylaminopropyl)-5,10-epoxy-5H-dibenzo[a,d]-cycloheptene dihydrochloride, which was found to bleach the tapidum lucidum in dogs when given subcutaneously, decreased sensitivity to light. The loss in sensitivity measured by behavioral techniques was correlated with the loss of coloration of the tapidum. Monkeys, not having a tapidum, did not show a similar effect.—*Journal abstract*.

9273. Harris, R. Adron; Iwamoto, Edgar T.; Loh, Horace H. & Way, E. Leong. (U California, San Francisco) **Analgetic effects of lanthanum: Cross-tolerance with morphine.** *Brain Research*, 1975, Vol 100(1), 221-225.—Data from Sprague-Dawley rats show that

both morphine and lanthanum produced analgesia when injected into the periaqueductal gray area and that chronic subcutaneous administration of morphine also produced tolerance to the effects of centrally administered lanthanum and morphine. It is suggested that Ca^{2+} antagonists such as lanthanum may be useful in understanding the neurochemical processes involved in analgesia, tolerance, and dependence. (21 ref)

9274. Heise, George A. (Indiana U) **Discrete trial analysis of drug action.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1898-1903.—Illustrates the use of discrete trial procedures by an examination of the effects of scopolamine, a representative cholinergic blocker, on several aspects of behavior: memory, inhibition, and discrimination. Response alternation experiments show that the drug does not affect memory "storage." Experiments in which discrete trials are presented in pairs, such that the correct response on Trial 2 of the pair is contingent upon Trial 1 events, show how the "disinhibiting" effect of scopolamine is augmented by increasing the time gap between Trial 1 and Trial 2, or by minimizing controlling stimuli on Trial 1. A variety of experiments suggest that scopolamine decreases the "detectability" of stimuli. Detectability effects, along with disinhibition observed under certain specific conditions, constitute the principal behavioral actions of scopolamine observed with discrete trial procedures. 9276. Hillbom, M. E. (Research Lab of the State Alcohol Monopoly, Helsinki, Finland) **The prevention of ethanol withdrawal seizures in rats by dipropylacetate.** *Neuropharmacology*, 1975(Oct), Vol 14(10), 755-761.—Tested the effect of dipropylacetate, an antiepileptic agent and gamma-aminobutyric acid-transaminase inhibitor, on withdrawal symptoms in rats made physically dependent on ethanol. If given together with the last dose of ethanol or continuously during the intoxication period, the drug effectively prevented both audiogenic seizures and loss of pain responses during the withdrawal state, but did not prevent symptoms if given 12 hrs after ethanol withdrawal. (25 ref)

9277. Hollister, A. S.; Ervin, G. N.; Cooper, B. R. & Breese, G. R. (U North Carolina, Medical School, Child Development Inst, Chapel Hill) **The roles of monoamine neural systems in the anorexia induced by (+)-amphetamine and related compounds.** *Neuropharmacology*, 1975(Oct), Vol 14(10), 715-723.—Examined the anorectic effects of dextroamphetamine, mephentermine, methylphenidate, amantadine, or fenfluramine in male Sprague-Dawley rats pretreated intracranially with either 6-hydroxydopamine or 5,7-dihydroxytryptamine. Destruction of brain dopamine systems antagonized the anorectic effect of amphetamine (4-3.0 mg/kg) and mephentermine (3-10 mg/kg), but did not block the anorectic effects of fenfluramine (1 mg/kg). Neither destruction of brain norepinephrine systems nor depletion of norepinephrine with the dopamine- β -hydroxylase inhibitor, U-14,624, antagonized the anorectic response

to amphetamine. While destruction of brain serotonin-containing systems did not alter the anorectic response to amphetamine, it significantly enhanced the anorectic potency of fenfluramine. (29 ref)—*Journal abstract.*

9278. Kamel, Chiaki; Masuda, Yoshinobu; Oka, Makoto & Shimizu, Masanao. (Dainippon Pharmaceutical Co, Research Lab, Osaka, Japan) **Effects of antidepressant drugs on amygdaloid after-discharge in rats.** *Japanese Journal of Pharmacology*, 1975(Aug), Vol 25(4), 359-365.—Investigated the effects of 11 drugs given ip in a total of 286 implanted male Wistar rats in correlation with antimuricidal effects and neurotoxicity. Tricyclic antidepressants such as amitriptyline, imipramine, and nortriptyline markedly depressed both afterdischarge and muricide at doses smaller than neurotoxic doses. The effect of PF-257 was the same as that of tricyclic antidepressants. Methamphetamine and pipradrol blocked the muricide at doses smaller than neurotoxic doses without depressing the amygdaloid afterdischarge. Major tranquilizers, chlorpromazine and clozapine, depressed both afterdischarge and muricide only at doses larger than those which impaired rotarod performance. Haloperidol depressed the afterdischarge without selectively blocking the muricide. Minor tranquilizers, diazepam and chlordiazepoxide, did not block the muricide at doses smaller than neurotoxic doses, although they caused a marked depression of the afterdischarge. —*Journal abstract.*

9279. Klawans, Harold L.; D'Amico, D. J. & Patel, B. C. (Michael Reese Hosp & Medical Ctr, Div of Neurology, Chicago, IL) **Behavioral supersensitivity to 5-hydroxytryptophan induced by chronic methysergide pretreatment.** *Psychopharmacologia*, 1975, Vol 44(3), 297-300.—The administration of 5-hydroxytryptophan to intact male guinea pigs resulted in rhythmic myoclonic behavior. This behavior was blocked acutely by subcutaneous methysergide but was intensified in Ss chronically pretreated with methysergide. Brain serotonin concentrations of Ss pretreated with methysergide did not differ from saline-treated controls. Results are compatible with the hypothesis that prolonged methysergide administration can result in pharmacologically induced denervation hypersensitivity at central serotonin receptors. (23 ref)—*Journal abstract.*

9280. Laties, Victor G. (U Rochester) **The role of discriminative stimuli in modulating drug action.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1880-1888.—Behavior reinforced in the presence of a stimulus comes under the control of the stimulus. A drug can then modify that control and, therefore, modify the behavior itself. Pigeons that had been trained on a FI schedule showed great changes in response distribution after amphetamine and scopolamine. The same Ss when performing on an FI schedule to which time-correlated discriminative stimuli had been added, showed smaller changes in response distribution. Other pigeons were trained to make a minimum number of consecutive responses on 1 key before a peck on a 2nd key would be reinforced; d-amphetamine and scopolamine led to pronounced increases in premature switching. Adding a discriminative stimulus when the response requirement was fulfilled increased the likelihood that a switch would occur only after the appropriate number of pecks had

been emitted. It also attenuated the effects of the drugs. The presence of discriminative stimuli did not make as large a difference in performance when chlorpromazine and promazine were studied. Work with other schedules of reinforcement supports the conclusion that behavior under strong external stimulus control is less apt to be readily affected by many drugs. (40 ref)—*Journal abstract*.

9281. LeBlanc, A. Eugene; Gibbins, R. J. & Kalant, Harold. (Addiction Research Foundation, Ontario, Canada) **Generalization of behaviorally augmented tolerance to ethanol, and its relation to physical dependence.** *Psychopharmacologia*, 1975, Vol 44(3), 241-246.—87 male Wistar rats, required to perform a motor coordination task while under the influence of ethanol (2.2. g/kg) daily for 12 days, developed significant tolerance to the effects of ethanol, not only on this test but also on a food-motivated maze task. At the same time, they showed reduced shock threshold for production of a startle response, and reduced open field test scores 23 hrs after the last dose of ethanol. Ss receiving the same dose of ethanol immediately after each training session on the coordination task, and others performing the task and receiving no ethanol, showed no tolerance on either test and no change in shock threshold or open field behavior. Results suggest that behaviorally augmented tolerance depends on basic neuronal adaptive changes indistinguishable from those accompanying physiological tolerance and dependence.—*Journal abstract*.

9283. Leibowitz, Sarah F. (Rockefeller U, New York, NY) **Catecholaminergic mechanisms of the lateral hypothalamus: Their role in the mediation of amphetamine anorexia.** *Brain Research*, 1975, Vol 98(3), 529-545.—Studied the brain mechanisms mediating the suppressive effects of amphetamine on feeding behavior in 112 male albino Sprague-Dawley rats. Drugs were injected directly in the anterolateral hypothalamus. Results show that (a) over a dose range of 0.8-51.4 µg, dextroamphetamine produced a reliable suppression of food consumption (20-88%) and was approximately 3 times more potent than levoamphetamine in yielding this effect; (b) the anorexic effect of dextroamphetamine was abolished by local injection of alpha-methyltyrosine and FlA-63, an inhibitor of norepinephrine (NE); (c) the anorexic effect of dextroamphetamine was also antagonized by dopaminergic or beta-adrenergic receptor blockers, but not alpha-adrenergic, serotonergic, and cholinergic blockers; (d) dopaminergic or beta-adrenergic receptor blockers were also effective in antagonizing the anorexic effect of peripherally administered dextroamphetamine. Results suggest that amphetamine acts through the lateral hypothalamus in suppressing feeding behavior, causing a release of dopamine and NE from lateral hypothalamic nerve endings and a subsequent stimulation of dopaminergic and beta-adrenergic receptors located in that region. (82 ref)—*Journal abstract*.

9284. MacDonnell, M. F.; Brown, S. H. & Davy, B. (Rutgers State U, Livingston Coll) **Hyperexcitability in the neural substrate of emotional behavior in cats after alcohol withdrawal: Evidence of a rapid development of alcohol dependence.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1480-1492.—In a study with 10 adult female cats, substantial and prolonged withdrawal hyperexcitability (e.g., hissing) in the neural substrate for affective defense (hypothalamus and amygdala) was found when Ss were given moderate to heavy doses of alcohol for 6-72 hrs. Data indicate a rapid development of physical dependence on alcohol in this portion of the CNS. (16 ref)

9286. Massotti, M.; de Carolis, A. Scotti & Longo, V. G. (Istituto Superiore di Sanità Rome, Italy) **Effects of trazodone on behavior and brain amine content of mice.** *Current Therapeutic Research*, 1976(Jan), Vol 19(1), 133-139.—Experimental results in Swiss mice confirm earlier findings that trazodone enhances the behavioral effect of 5-hydroxytryptophan in mice pretreated with pargyline. Serotonin levels were also significantly higher. Results point to the complexity of the action of a drug like trazodone on the various processes of bioamine metabolism.

9287. McMillan, D. E. (U North Carolina, Medical School, Chapel Hill) **Determinants of drug effects on punished responding.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1870-1879.—The effects of drugs on punished responding depend on interactions among a large number of experimental variables (e.g., the drug history of the animal; the dose of the drug administered; the type, intensity, and duration of stimulus used to punish responding; the control rate and pattern of punished responding, and the deprivation state of the animal. Although it is not known how all of these variables interact to determine the effect of drugs on punished responding, there is evidence that many of these variables are important as determinants of drug effects. The task facing behavioral pharmacologists studying drug effects on punished responding is to determine under what conditions drugs produce their characteristic effects on punished responding. (43 ref)—*Journal abstract*.

9288. Mello, Nancy K. (McLean Hosp, Alcohol & Drug Abuse Research Ctr, Belmont, MA) **Behavioral toxicology: A developing discipline.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1832-1834.—Describes the rationale of behavioral toxicology, the aim of which is not only to detect and measure the behavioral effects of known pollutants, but also to devise sensitive techniques to evaluate the consequences of exposure to new and untested chemicals. Comparisons between behavioral toxicology and pharmacology are discussed. While behavioral pharmacology focuses on the relatively short-term effects of drugs, the emphasis of behavioral toxicology is on the long-term detection of the effects of an agent that may accumulate very slowly and produce behavioral effects only after it reaches a critical concen-

tration. In addition, the pollutants that are the focus of behavioral toxicology are rarely self-administered as are the drugs studied in behavioral pharmacology. Clinical aspects of this new field are discussed and the need for more detailed prediction studies is emphasized. (22 ref)—*L. Gorsey*.

(U South Carolina, Coll of Health & Physical Education) **Relation between tobacco smoking of pregnant women and body size of their progeny: A compilation and synthesis of published studies.** *Human Biology*, 1975(Dec), Vol 47(4), 451-472.—On the basis of studies made in 11 countries, cigarette smoking by pregnant women appears to be associated with higher neonatal mortality of offspring, lower birthweight, and shorter body length at birth and 11 yrs of age. (57 ref)—*S. L. Warren*.

9290. Miller, Ralph R.; Small, David & Berk, Alvin M. (Brooklyn Coll, City U New York) **Information content of rat scotophobin.** *Behavioral Biology*, 1975(Dec), Vol 15(4), 463-472.—Synthetic rat scotophobin, a polypeptide alleged to encode "fear of the dark," was injected into male Swiss-Webster mice in Exp I. No effect was observed when Ss were tested without reinforcement; however, a weak positive-transfer effect appeared after Ss were given footshock. Data suggest that scotophobin facilitated acquisition rather than interacted with nonassociative consequences of reinforcement such as stress. Unavailability of additional scotophobin prevented examination of the task specificity of this facilitated acquisition. Exp II indicated that 94 trained male Sprague-Dawley rat scotophobin donors did not learn to avoid the dark but did come to avoid other apparatus cues. This requires some reinterpretation of scotophobin studies using rodents as recipients and a complete reexamination of scotophobin studies using goldfish as recipients.—*Journal abstract*.

9291. Mishara, Brian L.; Kastenbaum, Robert; Baker, Frank & Patterson, Robert D. (U Massachusetts, Boston) **Alcohol effects in old age: An experimental investigation.** *Social Science & Medicine*, 1975(Oct), Vol 9(10), 535-547.—Assessed psychological and physical effects of alcoholic beverages in 2 different elderly populations: a nursing home ($N = 61$), where elders were of low functional status, and a residence ($N = 84$) for more independent and capable elders. At both settings, 2 servings of various alcoholic beverages (each containing 0.4 fl oz of alcohol) were available during a social hour to voluntary participants 5 days/wk. Randomly chosen participants in the experimental condition had alcohol available for 18 wks; controls had only nonalcoholic beverages available during the 1st 9 wks, and then alcoholic beverages for 9 wks. Medical and psychological data were gathered by physicians and interviewers who were blind to the Ss' assignment to experimental conditions and consumption rates. Data were gathered before the start of the project, after the 1st 9 wks and at the end (after 18 wks). Medical information included electrocardiograms, blood tests, and a special physical examination which focused on changes which could be related to alcohol consumption. Psychological assessments included measures standardized on geriatric populations (e.g., Powell Lawton's Morale Scale and R. Kastenbaum and S. Sherwood's VIRO Scale), as well as

questions about daily living (e.g., how well people slept). No negative physiological or psychosocial changes were attributable to alcohol consumption or participation in the social hours and no alcoholism occurred. A number of positive effects were found, e.g., participants who drank improved in cognitive performance, increased morale and reported sleeping better. Although there were positive results for experimental and control Ss, improvements were more frequent in the experimental group and among drinkers. Thus, the availability of moderate amounts of alcoholic beverages offers benefits for the elderly and has few drawbacks. (34 ref)—*Journal abstract*.

9292. Miskin, R.; Ropartz, Ph. & Mandel, P. (U Louis Pasteur, Lab de Psychophysiologie, Strasbourg, France) **The effects of n-dipropylacetate on the acquisition of conditioned behaviour with negative reinforcement in mice.** *Psychopharmacologia*, 1975, Vol 44(3), 263-265.—n-Dipropylacetate (nDPA), at an ip dose of 100 mg/kg, had a facilitating action on the acquisition of conditioned reactions with negative reinforcement in 45 male Swiss mice. On the other hand, nDPA reduced the number of conditioned reactions with a dose of 200 mg/kg. These effects of nDPA on conditioned behavior were correlated with the increase of the level of brain gamma-aminobutyric acid following administration of nDPA. (16 ref)

9293. Morse, W. H. (Harvard U, Medical School, Boston) **Schedule-controlled behaviors as determinants of drug response.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1868-1869.—Notes that schedule-controlled performances began to be used in assessing the behavioral effects of drugs because of practical advantages over other techniques for studying behavior. Schedule-controlled behavior is, however, of fundamental importance in behavioral pharmacology. It has been found repeatedly that the effects of many drugs depend critically upon the patterns of responding engendered by different schedule contingencies. These dependencies of the effects of drugs on schedule-controlled behavior occur because ongoing behavior is itself an important determinant of drug action.—*Journal abstract*.

9297. Redmond, D. Eugene; Borge, George F.; Buchsbaum, Monte & Maas, James W. (Illinois State Psychiatric Inst, Chicago) **Evoked potential studies of brain catecholamine alterations in monkeys.** *Journal of Psychiatric Research*, 1975(Aug), Vol 12(2), 97-116.—Administered 3 compounds affecting catecholamines to 4 *Macaca speciosa* and measured averaged evoked responses (AERs) at different time periods. Results suggest that the catecholamines have some effect on the way that visual stimuli are processed by the primate brain. Although there was no precise prediction of the nature of

the effect, the changes were consistent with the known biochemical effects of the drugs. The most significant effects of these compounds on the AER occurred during the intermediate time periods, 72-112 and 120-240 msec after stimulus onset. It is concluded that the changes seen in the AER are the result of changes in brain catecholamine levels since they are seen consistently at the same latency after administration of 3 different compounds affecting catecholamines in different ways, and since the direction of changes is consistent with the expected pharmacologic effects of the substances, especially on norepinephrine levels. 9299. Rnic, Alec. (Carleton U, Ottawa, Canada) **Effects of pH on the rate of aggressive display for mirror image reinforcement in Siamese fighting fish (*Betta splendens*).** *Aggressive Behavior*, 1975, Vol 1(3), 213-215.—Studied an hypothesis suggesting that fluctuations in hydrogen ion (pH) intensity may suppress the rate of aggressive display in Siamese fighting fish. The effect of pH upon the rate of ring swimming for aggression-releasing mirror image presentation was investigated in 4 male fish under pH intensities of 5.0, 7.0, and 9.0 in a steady-state design. Results indicate no significant variation in the rate of response over pH levels. Two possible mechanisms of pH resistance are discussed.—*Journal abstract.*

9300. Roszell, D. K. & Horita, A. (U Washington, Medical School, Seattle) **The effects of haloperidol and thioridazine on apomorphine- and LSD-induced hyperthermia in the rabbit.** *Journal of Psychiatric Research*, 1975(Aug), Vol 12(2), 117-123.—Administered LSD (100 µg/kg or apomorphine (4 mg/kg) to male New Zealand rabbits. A pronounced hyperthermic response resulted, accompanied by behavioral excitation and sympathetic activity. In addition, apomorphine elicited several compulsive stereotyped responses, such as head turning and gnawing. Rabbits which were pretreated with various doses of thioridazine or haloperidol responded to LSD with slightly attenuated hyperthermia and behavioral excitation. The apomorphine-induced responses were markedly attenuated or abolished with far smaller doses of the neuroleptics. The hyperthermic action of apomorphine was more sensitive to the actions of the antagonists than were the behavioral signs, total blockade being seen with 0.5 mg/kg of thioridazine and 0.05 mg/kg of haloperidol. The hyperthermic response to apomorphine thus represents a sensitive dopaminergic response, and may serve as a useful model in evaluating the antidopamine activity of the neuroleptic drugs. 9301. Satinder, K. P. (Lakehead U, Thunder Bay, Canada) **Interactions of age, sex and long-term alcohol intake in selectively bred strains of rats.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1493-1507.—Studied alcohol consumption by a total of 72 rats of 5 genotypes (MNR/Har/Lu, MR/Har/Lu, RCA/Lu, RHA/Lu, and RLA/Lu) in 2 experiments. In Exp I, each of 9 solutions ranging in strength from 0.25 to 64% were presented to the Ss for 7 days in a 2-choice, 3-bottle

situation (i.e., alcohol, water, or empty bottle). In Exp II, only a 10% solution was used. Results suggest that the increase in alcohol intake with age is genotype-dependent and that the higher intake is due to genetic factors rather than to body weight differences rather than any other biological characteristics. The long-term self-administration of alcohol did not lead to development of adaptation to alcohol or a withdrawal syndrome of hyperactivity. Findings support a previously proposed relationship between alcohol intake and phenotypes of emotional reactivity and avoidance conditionability since the strains higher on emotional reactivity (MR/Har/Lu) and avoidance conditionability (RHA/Lu) drank more alcohol than the other strains low on these dimensions. It is suggested that emotional reactivity and avoidance conditionability may regulate alcohol consumption. (16 ref)—*L. Gorsey*

9303. Schuster, Charles R. & Fischman, Marian W. (U Chicago, Pritzker School of Medicine) **Amphetamine toxicity: Behavioral and neuropathological indexes.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1845-1851.—Outlines an animal model for the assessment of a drug's toxicity. The model includes behavioral assays, the results of which can be correlated with other functional and morphological changes occurring simultaneously in the experimental organism. Findings on the actions of amphetamines, the effects of therapeutic doses, the behavioral effects of chronically administered amphetamines in animals and humans, and the effects of withdrawal of amphetamines after chronic administration are reviewed. Data from monkeys given chronic administrations of methamphetamine demonstrate a residual tolerance to the response suppressant effects of the drug. Morphological and biochemical consequences of methamphetamine are also examined. Implications for future research are discussed in terms of the suggestion that functional changes can occur with shorter exposures or with exposure to lower doses than are necessary to produce morphological changes. (43 ref)—*L. Gorsey.*

9304. Seiden, L. S.; MacPhail, R. C. & Oglesby, M. W. (U Chicago) **Catecholamines and drug-behavior interactions.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1823-1831.—The effects of several drugs on schedule-controlled operant behavior depend on the baseline rate of responding and on the nature of the environmental conditions that maintain the behavior. A neurochemical mechanism for these rate-dependent effects has not been established. However, evidence suggests that catecholamines are functionally important in the maintenance of many types of behavior. The fact that many drugs which exhibit drug-behavior interactions also produce characteristic effects on the metabolism of CNS catecholamines suggests that the performance of operant behavior per se modifies brain catecholamine metabolism and thereby the subsequent drug effect. Experiments measuring the depletion of catecholamines following synthesis inhibition with alpha-methyl-para-tyrosine or changes in the specific activity of norepinephrine after tritium labeling, have shown that

operant behavior alters the metabolism of catecholamines. Results suggest a neurochemical mechanism for the rate-dependent effects of amphetamine and α MT. A model is presented that may account for the general phenomenon of drug-behavior interactions in neurochemical terms. (88 ref)—*Journal abstract*.

9305. Shaywitz, Bennett A.; Yager, Robert D. & Klopfer, Jeffrey H. (Yale U, Medical School) **Selective brain dopamine depletion in developing rats: An experimental model of minimal brain dysfunction.** *Science*, 1976(Jan), Vol 191(4224), 305-308.—Administration of 6-hydroxydopamine to 31 neonatal rats produced a rapid and profound depletion of brain dopamine. Total activity of treated Ss was significantly greater than that of 27 controls between 12 and 22 days of age, but then declined, an activity pattern similar to that seen in affected children. Data suggest a functional deficiency of brain dopamine in the pathogenesis of minimal brain dysfunction.—*Journal abstract*.

9307. Sparber, Sheldon B. (U Minnesota) **Neurochemical changes associated with schedule-controlled behavior.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1802-1812.—By combining the technologies of radioisotope chemistry, operant behavior control and modification, and brain perfusion with push-pull cannulas, changes in the disposition of the radiolabeled monoamine transmitter candidates and their metabolites were studied. A review of findings suggests that these substances co-vary with changes in complex behavior maintained by operant schedules of reinforcement and affected by changes in schedules or administration of psychotropic drugs. Other observations support the concept of dynamic changes within the extracellular environment of the CNS that may be part of a hormone-like communicating system with functional significance. These initial studies indicate the availability of a powerful tool for the study of drug-neurochemical-behavioral interactions using Ss as their own controls for extended periods of time so that phenomena of plasticity, tolerance, and dependence may likewise be examined. (61 ref)—*Journal abstract*.

9308. Spyker, Joan M. (U Virginia, Medical School) **Assessing the impact of low level chemicals on development: Behavioral and latent effects.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1835-1844.—There is growing evidence that nervous tissue, especially the brain, is more sensitive to many foreign chemical substances than has previously been suspected, and that toxic effects may be manifested as subtle disturbances of behavior long before any classical symptoms of poisoning become apparent. Early detection of an insidious toxic process (behavioral toxicology) may enable the prevention or attenuation of harm to humans and other organisms. There is also increasing evidence that individuals are more vulnerable to adverse factors during the period of development (conception \leftarrow puberty) than at any other time in life. Subtle functional disturbances in organisms exposed while immature

(behavioral teratology) may be one of the most sensitive indicators of chemical toxicity. Examples of the effects of pre- and postnatal exposure to methylmercury are presented for a thorough assessment of the impact of certain low level chemicals on human health. (38 ref)—*Journal abstract*.

9309. Stewart, W. J. & Blain, S. (La Trobe U, Bundoora, Australia) **Dose-response effects of scopolamine on activity in an open field.** *Psychopharmacologia*, 1975, Vol 44(3), 291-295.—In a total of 40 female Wistar hooded rats, the frequency of the responses (i.e., ambulation, rearing, and grooming) were recorded over 30 min for saline, and 0.25, 1.0, 2.0, and 4.0 mg/kg scopolamine treated groups. Scopolamine produced an inverted U response curve for ambulation, an increase in rearing, but no effect on grooming. All 3 responses decreased over time; scopolamine did not attenuate this rate of habituation. There did appear a dose-related time effect. It is concluded that scopolamine may have different effects on various responses recorded simultaneously over a range of doses. Results, when compared to other experiments, emphasize the importance of environmental factors in determining drug effects on behavior. (31 ref)—*Journal abstract*.

9310. Thompson, Travis & Pickens, Roy. (U Minnesota, Minneapolis) **An experimental analysis of behavioral factors in drug dependence.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1759-1770.—Discusses the operation of drug reinforcers in the self-administration experimental situation. Variables influencing the drug functions in the acquisition, maintenance, and elimination phases of dependency are examined. Inducing and noninducing procedures used in studying acquisition of drug-reinforced behaviors are identified, 2 major variables in the maintenance of drug self-administration (injection dose and schedule of drug presentation) are considered, and 3 procedures for reducing or eliminating control of a reinforcing drug (weakening the reinforcing properties of the drug, changing stimulus control of drug self-administration, properties of the drug, changing stimulus control of drug self-administration, and increasing the probability of punishment associated with drug taking) are evaluated. Reasons why scientific analysis is relevant to the study of a complex problem such as drug dependence and implications for the study of drug use in humans are examined. (84 ref)—*L. Gorsey*.

9311. Tilson, H. A. et al. (Bristol Lab, Syracuse, NY) **Behavioral and neuropharmacological analysis of amphetamine and 2,5-dimethoxy-4-methylamphetamine in rats.** *Psychopharmacologia*, 1975, Vol 44(3), 229-239.—Doses of 0.10-1.0 mg/kg amphetamine and 2,5-dimethoxy-4-methylamphetamine (DOM) had similar effects on food-reinforced and shock-avoidance behavior in experiments with Fisher and Sprague-Dawley albino, Long-Evans, and hooded rats. Similarities were noted in their effects on horizontally directed motor activity when testing was preceded by a period of acclimation. Most doses of DOM tended to decrease unacclimated motor activity, while amphetamine increased it. Experiments indicated that brain catecholamines (CA) and serotonin (5-HT) were involved in the behavioral effects of both DOM and amphetamine. Cinanserin attenuated the behavioral disruptive effects

of both agents on food-reinforced responding. Cinaserin attenuated the effects of all doses of DOM and those of higher doses of amphetamine on shock avoidance. Prior depletion of brain CA with α -methyltyrosine (AMT) did not affect DOM-induced disruption of food-reinforced responding, while AMT attenuated the behavioral effects of all doses of DOM and amphetamine on shock avoidance. Data suggest that DOM and amphetamine share a similar component in their mechanism of action which depends on the availability of a releasable pool of brain CA. (27 ref)—*Journal abstract*.

9312. Tilson, H. A.; Baker, T. G. & Gyls, J. A. (Bristol Labs, Syracuse, NY) **A comparison of the discriminative stimulus properties of R-2,5-dimethoxy-4-methylamphetamine (R-DOM) and S-amphetamine in the rat.** *Psychopharmacologia*, 1975, Vol 44(3), 225-228.—The effects of 0.75 mg/kg R-DOM and 1.0 mg/kg dextroamphetamine served as discriminative stimuli in the control of a 2-lever discriminative response. Dose-response evaluation in 8 male Long-Evans rats indicated that in amphetamine-trained Ss the drug effects produced by 0.5-2.2 mg/kg amphetamine could be considered as a dose-dependent continuum of low to high stimulus intensity. In R-DOM trained Ss, low to moderate doses of R-DOM (0.5-1.5 mg/kg) produced dose-related discriminative responding, but the high dose (2.2 mg/kg) resulted in random responding. When Ss trained to discriminate 1.0 mg/kg amphetamine from saline were given 0.5 or 0.75 mg/kg R-DOM, they tended to respond on the drug-correct lever. However, higher doses of R-DOM (1.5 and 2.2 mg/kg) produced random responding. Ss trained to discriminate 0.75 mg/kg of R-DOM from saline exhibited correct responses following 0.5 and 0.76 mg/kg of amphetamine, but not after 1.5 and 2.2 mg/kg. Data suggest that low doses of R-DOM produce discriminative stimuli that are qualitatively different from those of higher doses. Stimuli following low doses of R-DOM appear similar in some respects to those following low doses of dextroamphetamine.—*Journal abstract*.

9313. von Hungen, Kern; Roberts, Sidney & Hill, Diane F. (U California, Medical School, Los Angeles) **Interactions between lysergic acid diethylamide and dopamine-sensitive adenylate cyclase systems in rat brain.** *Brain Research*, 1975, Vol 94(1), 57-66.—Studied interactions of dextro-LSD (D-LSD) and other serotonin antagonists with catecholamine-sensitive adenylate cyclase (ADC) systems in cell-free preparations from different regions of the Sprague-Dawley rat brain. In equimolar concentration, D-LSD, 2-bromo-D-lysergic acid diethylamide, or methysergide strongly blocked maximal stimulation of ADC activity by either norepinephrine or dopamine in particulate preparations from cerebral cortices of young adult rats. D-LSD also eliminated the stimulation of ADC activity by equimolar concentrations of norepinephrine or dopamine in particulate preparations from rat hippocampus. The effects of this hallucinogenic agent on ADC activity were most striking in the corpus striatum. Results indicate that serotonin antagonists are potent inhibitors of catecholamine-induced stimulation of ADC systems in brain cell-free preparations and that LSD is capable of acting as an agonist at central dopamine and serotonin receptors, as

well as functioning as an antagonist at dopamine, norepinephrine, and serotonin receptors in the brain. (28 ref)—*Journal abstract*.

9314. Wada, Juhn A.; Osawa, Takeshi & Corcoran, Michael E. (U British Columbia, Medical School, Vancouver, Canada) **Effects of tetrahydrocannabinols on kindled amygdaloid seizures and photogenic seizures in Senegalese baboons, *Papio papio*.** *Epilepsia*, 1975(Sep), Vol 16(3), 439-448.—Ip injections of Δ^9 -tetrahydrocannabinol (THC) and Δ^8 -THC (100 and 200 mg/ml of ethanol, respectively) failed to affect myoclonic response to photic stimulation in 6 Senegalese baboons. However, both isomers of THC exerted dose-related antiepileptic effects on established kindled convulsions provoked by electrical stimulation of amygdala in the same species. Δ^8 -THC was more potent than Δ^9 -THC, in terms of both antiepileptic effects and general toxicity. The antiepileptic effects of the THC isomers appear to be due mainly to the suppression of propagation of the induced afterdischarge to distant cerebral structures, although high doses also seem to suppress afterdischarge at the site of stimulation. (French, Spanish & German summaries) (19 ref)—*Journal summary*.

9315. Wada, Juhn A.; Wake, Akira; Sato, Mitsumoto & Corcoran, Michael E. (U British Columbia, Div of Neurological Sciences, Vancouver, Canada) **Antiepileptic and prophylactic effects of tetrahydrocannabinols in amygdaloid kindled cats.** *Epilepsia*, 1975(Sep), Vol 16(3), 503-510.—Reports 2 experiments with a total of 18 cats in which acute ip administrations of Δ^9 -tetrahydrocannabinol (THC) or Δ^8 -THC (.25-4.0 mg/kg) failed to affect partially developed or fully developed kindled amygdaloid seizures. However, Δ^8 -THC was effective in suppressing focal afterdischarge in the stimulated amygdala when administered very early in kindling. This finding suggests that chronic administration of Δ^8 -THC during kindling might block the process of seizure development. This idea was also supported by the observation that 3 of 4 Ss failed to kindle when treated with the drug. The S that failed to be protected by Δ^8 -THC was also insensitive to the general electroclinical effects of moderately high dosages of Δ^8 -TH. The prophylactic activity of Δ^8 -THC is in contrast to the ineffectiveness of diphenylhydantoin, a drug whose anticonvulsant activity is often compared with that of THC. (French, Spanish & German summaries)—*Journal summary*.

9316. Warner, Rebecca H. & Rosett, Henry L. (Boston U, Medical School) **The effects of drinking on offspring: An historical survey of the American and British literature.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1395-1420.—Considers that current research on the effects on offspring of drinking during pregnancy has revived interest in an extremely old topic. Observations made during England's Gin Epidemic (1720-1750) were followed by warnings of 19th-century medical writers that parental drinking could damage the fetus. Many concurring studies were reported in the medical literature from 1865 to 1920. Research interest declined during Prohibition, and authorities later discounted the previous work. Recently a relationship between maternal drinking and abnormal morphogenesis has again been described. (110 ref)—*Journal abstract*.

9317. Weeks, James R. (Upjohn Co, Experimental Biology Div, Kalamazoo, MI) **Environmental influences affecting the voluntary intake of drugs: An overview.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1755-1758.

—Discusses external and internal environmental factors in voluntary drug intake by animals. Environmental factors affecting drug intake include the dose, type and schedule of administration, and conditioning of drug administration to secondary cues. There are differences in drug self-administration of stimulant drugs (as amphetamines) and depressants (as morphine and barbiturates). There appears to be an inverse relation between the size of the dose and number of injections taken, but for stimulants daily intake will remain constant, whereas for depressants smaller doses are only partially compensated for by increased numbers of injections. Likewise, drug intake of stimulants is better maintained on ratio schedules. Neutral stimuli, as lights or buzzers, paired with drug injections can be used to elicit conditioned responses. (52 ref)—*Journal abstract*.

9318. Widelitz, Martin M.; Coryell, Marlene R.; Widelitz, Howard & Avadhani, Narayan G. (VA Hosp, Coatesville, PA) **Dissociation of rat brain polyribosomes in vivo by amphetamines.** *Brain Research*, 1975, Vol 100(1), 215-220.—In a study with Charles River CDR rats, doses of dextroamphetamine which induced stereotypic behavior (2-8 mg/kg) also caused a significant dissociation of rat brain polyribosomes. A rough correlation between the dose-rate and the extent of polyribosome dissociation was found.

9319. Winn, Frank J.; Kent, Michael A. & Libkuman, Terry M. **Learned taste aversion induced by cortical spreading depression.** *Physiology & Behavior*, 1975(Jul), Vol 15(1), 21-24.—30 male Sprague-Dawley albino rats were cannulated and placed on a 24-hr water deprivation schedule. Ss were allowed 10-min access to water in a large animal cage for 5 days. On the 6th day of deprivation the Ss were randomly divided into 6 groups and given either 12% KCl, 25% KCl, or Ringers solution applied unilaterally or bilaterally to the cortex immediately after access to 8% sucrose. On the 7th day of deprivation, each S was placed in a 2-choice situation with the sucrose solution and water. Only the unilateral and bilateral 12% KCl groups developed an aversion to the sucrose. Results indicate that cortical spreading depression has aversive as well as amnesic properties, that there exists a gradient of amnesia, dependent on concentration, and that the cortex is not necessary for learning a taste aversion. (18 ref)—*Journal abstract*.

9320. Winter, J. C. (State U New York, Buffalo) **The stimulus properties of morphine and ethanol.** *Psychopharmacologia*, 1975, Vol 44(3), 209-214.—Attempted (a) to establish the efficacy of ip morphine and ethanol as discriminative stimuli when each is paired with the administration of saline and (b) to compare the stimulus properties of the 2 drugs, in female CFN rats. Additional experiments examined the effects of treatment with naloxone or levopropirolol on morphine and ethanol-mediated discriminated responding. The stereospecificity of the stimuli produced by morphine was determined by a comparison, in morphine-trained Ss, of levorphanol and dextrorphan. Discriminated responding developed rapidly in both the morphine and ethanol groups. In tests

in which ethanol was administered to morphine-trained Ss and vice versa, no similarity to stimulus properties was apparent. Naloxone blocked the actions of morphine but was without effect upon ethanol. No evidence of antagonism of either drug by propranolol was found. When a range of doses of levorphanol and dextrorphan was tested in morphine trained Ss, only levorphanol was able to substitute for morphine. Results suggest that the stimulus properties of morphine represent typical opiate effects. (34 ref)—*Journal abstract*.

9321. Woods, James H.; Downs, David A. & Carney, John. (U Michigan) **Behavioral functions of narcotic antagonists: Response-drug contingencies.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1777-1784.—Discusses behavioral effects of the narcotic antagonist naloxone in terms of stimulus functions. As an eliciting stimulus, the effects of naloxone depend on prior administration of narcotic. Administered independently of responding, naloxone can increase or decrease rates of narcotic-reinforced responding depending on the dose of naloxone. When naloxone is administered as a consequence of narcotic self-injection, the future probability of that behavior is reduced; thus, naloxone can function as a punishing stimulus. As a negatively-reinforcing stimulus, naloxone can maintain behavior which terminates or prevents delivery in morphine-dependent monkeys. In animals with previous naloxone avoidance-escape experience, unavoidable-inescapable injections of naloxone produce increases in avoidance-escape response rates. In these animals, responding subsequently can be maintained, at least temporarily, when naloxone is administered only as the consequence of responding. (36 ref)—*Journal abstract*.

9322. Yanai, Joseph & Ginsburg, Benson E. (Purdue U) **Suppressant effects of alcohol on audiogenic seizures.** *Epilepsia*, 1975(Sep), Vol 16(3), 491-496.—Genetically seizure susceptible DBA/1/Bg mice fed 10% ethanol in their drinking water exhibited a marked diurnal variation in blood alcohol levels. At peak levels, sound-induced seizures were significantly reduced. At trough levels, seizures remained unaffected. Ethanol administered during early development enhanced seizures at postweaning age. Such alcohol-augmented seizures were suppressed by ethanol feeding during the testing period, to the same base level as in Ss not pretreated with ethanol in early life. (French, Spanish & German summaries) (24 ref)—*Journal summary*.

9323. Yanaura, Saizo; Tagashira, Eijiro & Suzuki, Tsutomu. (Hoshi Coll of Pharmacy, Tokyo, Japan) **Physical dependence on morphine, phenobarbital and diazepam in rats by drug-admixed food ingestion.** *Japanese Journal of Pharmacology*, 1975(Aug), Vol 25(4), 453-463.—Exposed a group of 6 male and 5 female Sprague-Dawley JCL rats for 1 wk to 2 morphine-admixed foods, with morphine/food ratios of 0.5:1 mg/gm. A 2nd, similar, group could choose between 2 morphine-admixed foods with morphine/food ratios of 1:2 mg/gm. After 1 wk, morphine-admixed foods were replaced with morphine-free food for 2 days. Both groups showed greatly reduced body weight and food intake after the 1st 24-48 hrs withdrawal. Control groups of morphine-dependent Ss were kept on the morphine-added food diets and showed the same body weight

increase as normal control Ss. Physical dependence on phenobarbital and diazepam was produced using the same dosage schedules as with morphine. Both the lower and higher dose groups showed significant decrease in body weight due to withdrawal after 1 wk of drug food exposure. Levallorphan (0.5, 1, 3, and 5 mg/kg) administered subcutaneously to morphine-dependent Ss had dose-dependent effects on the intensity of abstinence symptoms, maximal decrease in body weight, and duration of decreased body weight. Cross-physical dependence between phenobarbital and diazepam was demonstrated. (24 ref)—*Journal abstract*.

9324. Ziance, Ronald J.; Sipes, I. Glenn; Kinnard, William J. & Buckley, Joseph P. (U Pittsburgh, Pharmacy School) **Central nervous system effects of fenfluramine hydrochloride.** *Journal of Pharmacology & Experimental Therapeutics*, 1972, Vol 180(1), 110-117.—Fenfluramine is a phenethylamine compound with a structure similar to that of amphetamine. These 2 compounds possess several major differences in pharmacologic properties, especially with regard to their effects on the CNS. Dextroamphetamine produced a dose-related increase of spontaneous motor activity (SMA) in mice; however, fenfluramine decreased SMA in a dose-related manner. Biochemical studies revealed that fenfluramine decreased the content of norepinephrine and dopamine in mouse and rat brain. Pretreatment of mice with an MAO inhibitor reversed the effect of fenfluramine from one of significant decrease of SMA to one of a marked increase; however, the ability of amphetamine to increase SMA of mice was enhanced by prior MAO inhibition. Data suggest that dextroamphetamine and fenfluramine differ in their interaction with central adrenergic neurons to produce their respective SMA effects in mice.—*Journal abstract*.

(U Reading, England) **Some aspects of speech production under controlled conditions of oral anesthesia and auditory masking.** *Journal of Phonetics*, 1975(Oct), Vol 3(4), 197-214.—The effects of oral anesthesia and auditory masking on various aspects of speech articulation in a native speaker of Australian English were objectively quantified by means of electropalatography and sound spectrography. Electropalatography was used to record details of the location and timing of tongue contacts with the palate during speech production under different conditions of sensory deprivation. Results show that changes in speech production caused by altered tactile and auditory feedback included a general "overshooting" of target articulation, manifested primarily by longer duration, greater area of tongue-palate contact, higher fricative frequency, and more fronted place of articulation. There was also some indication that different types of sensory information may play different roles in the ongoing control of speech performance. (46 ref)—*Journal abstract*.

9340. Lilienthal, Nathan. (U Southern California) **An empirical investigation of the influence of dogmatism, ego-involvement, and issue position on speech ratings.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5365.

9341. Luria, A. R. (U Moscow, Russia) **Scientific perspectives and philosophical dead ends in modern linguistics.** *Cognition: International Journal of Cognitive Psychology*, 1974-75, Vol 3(4), 377-385.—Examines some of the philosophical defects in N. Chomsky's (1972) hypothesis of the "inherited nature" of linguistic structures. It is argued that while the hypothesis has had a positive influence on the study of modern linguistics, it is a philosophical and psychological dead end. (36 ref)

9342. Richardson, Joyce A. (Ohio State U) **The identification by voice of speakers belonging to two**

ethnic groups. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4114-4115.

9343. Schlesinger, I. M. (Hebrew U, Jerusalem, Israel) **Why a sentence in which a sentence is embedded is difficult.** *International Journal of Psycholinguistics*, 1975, No 4, 53-66.—T. Bever (1970) has suggested that if a sentence segment is assigned a double function by one and the same processing strategy, difficulty ensues results, and that this explains the difficulty of multiple center-embedded sentences. The adequacy of this hypothesis for explaining the difficulty of various types of center-embedded sentences is discussed, and an alternative explanation is proposed. An experiment with 36 undergraduates was conducted in which the number of center embeddings and the number of double-function nouns varied independently. Each sentence was presented for 90 sec, whereupon Ss answered 2 comprehension questions. Results fail to support Bever's claim that the difficulty of multiple center-embedding is accounted for by the perceptual difficulty created by double function nouns. (French & Russian summaries)—*Journal summary*.

9344. Stillings, Neil A. (Stanford U) **Meaning rules and systems of inference for verbs of transfer and possession.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Oct), Vol 14(5), 453-470.—Developed a theory of comprehension in verification tasks from a general conception of language comprehension in which the meanings of words are represented as meaning rules, which are programs that perform inferences. A control process is proposed that solves verification problems by using meaning rules as difference reducing operators. 3 models were developed for a task involving the transfer verbs *borrow* and *loan* and the possession verb *have*. The response time data from an experiment with 16 university students support 1 of the models. A 2nd experiment with 12 undergraduates indicated that when instructed to do so Ss were able to use only 1 of the other 2 models. The models and theoretical framework are shown to be superior in some respects to constituent comparison and conversion models.—*Journal abstract*.

9345. Titone, Renzo. (U Rome, Italy) **Applied psycholinguistics: Amphibian or phantom?** *International Journal of Psycholinguistics*, 1975, No 4, 67-70.—Argues that applied psycholinguistics is not entitled to scientific (epistemological) independence. Some fields of research are intrinsic to "pure psycholinguistics" and are often improperly considered "applications" of more basic principles or data; other so-called psycholinguistic "applications" have been incorporated into different sciences or methodological systems losing thereby their independent psycholinguistic identity. A tentative classification of internal departments of psycholinguistics is suggested. (French & Russian summaries)—*Journal summary*.

Literature & Art

9347. Cody, John. (High Plains Comprehensive Community Mental Health Ctr, Hays, KS) **Richard**

Wagner and the Ur maternal sea. *Bulletin of the Menninger Clinic*, 1975(Nov), Vol 40(5), 545-557. Presents a psychobiographical analysis of Wagner. It is suggested that with Wagner's mother's identification, his new music would flow when the identification with the feminine was at its height.—J. Z. Elias.

9348. Dieckmann, H. [Typological aspects of fairy tales.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 318-335. 70 patients in individual psychotherapy who reported that as children they had a favorite fairy tale were examined in terms of their typology and its relationship to that fairy tale. Those who reported a favorite fairy tale were compared with those who reported none. Extroverts were less likely than introverts to have had such a favorite. The fairy tales of a given author demonstrated a calculable distribution in terms of typological functions. Patients usually identified with the hero or heroine by means of their main function. Identifications with characters representing the inferior functions also occurred. Fairy tales reflecting a certain function type were repeatedly chosen by patients of the same function and attitude type.—S. D. Babcock.

9349. Hess, Gertrud. [King Stag: The Eros problem in modern poetry.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 472-481.—The text of the Henze opera, *Il Re Cervo*, of Heing von Cramer is a fairy tale with a clear analogy to Jung's way of thinking, as when it speaks of the unity of opposites and of loyalty to a transcendental guidance. Understanding poetry is the result of a deep regression as Jung saw regression: the withdrawing libido enlivens the self.—S. D. Babcock.

9350. Hurwitz, S. [Ahasver, the eternal wanderer: Historical and psychological aspects.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 450-471.—Various motifs in the myth of the eternal Jew are analyzed in psychological terms. G. H. Grahies's theory of the Jew as a restless wanderer is refuted by psychoanalytical interpretations. The latent heathen and Jewish traits in the unconscious of man in Christian Western civilization have found expression in the figure of Ahasver.—S. D. Babcock.

9351. Immoos, Th. (Sophia U, Tokyo, Japan) [The midnight sun: A literary and religious-historical topos in the East and West.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 482-500.—"Topoi" were literary expressions existing in both Eastern and Western cultures. Jung's theory of archetypes in the collective unconscious helps to explain this wide distribution as an indication of man's common heritage. The "topos" of the midnight sun is a symbolic expression of the deep-rooted desire to find the meeting of opposites. It is a symbol of the state of perfection, the original oneness, the archetype of the essential wholeness achieved through the interaction of opposites.—S. D. Babcock.

9352. Kapacinskas, Thomas J. (Private practice, South Bend, IN) *The Exorcist and the spiritual problem of modern woman. Psychological Perspectives*, 1975(Fal), Vol 6(2), 176-183.—Analyzes *The Exorcist* in terms of Jungian psychology, which postulates that masculine and feminine modes of being exist within each sex, each mode having its positive and its negative side. In the film, the "liberated" mother's masculine mode is not a source

of creative strength but has become demonic, and the child "lives out the unconscious of the parent."

9353. Kluger-Scharf, Rivkah. [Some psychological aspects of the Gilgamesh epic.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 386-421.—This epic is the oldest known myth dating back to the 4th century BC. In Jungian terms, its inner structure shows a process of change in the collective unconscious, an anticipation of the individuation process.—S. D. Babcock.

9354. Ober, William B. (Mt Sinai School of Medicine, City U, New York) Swinburne's masochism; Neuropathology and psychopathology. *Bulletin of the Menninger Clinic*, 1975(Nov), Vol 39(6), 501-555.—Analyzes the masochistic behavior and fantasies of the poet Algernon C. Swinburne. It is suggested that causative and environmental factors that may have effected this behavior include the fact that he came from a family of much intermarriage and that he suffered from early brain damage. (41 ref)—J. Z. Elias.

9355. Ruane, Frances V. (Pennsylvania State U) An investigation of the relationship of response modes in the perception of paintings to selected variables. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B, Pt 1), 5031.

9366. Knopf, Irwin J. & Mabel, Robert M. (Emory U) **Vigilance performance in second graders as a function of interstimulus intervals, socio-economic levels, and reading.** *Merrill-Palmer Quarterly*, 1975(Jul), Vol 21(3), 195-203.—2nd grade students with high or low reading skill were selected from schools in a middle- and a lower-class neighborhood. There were 10 Ss in each cell of the resulting 2×2 design. Ss viewed 2,430 slides of faces with happy or sad expressions and were asked to press a button when 1 of the 35 sad expression slides was shown. 30-sec intervals separated stimuli during the first and last thirds of the task, while longer (2 min, 48-sec) intervals separated slides during the middle third. Vigilance scores were greater for middle-class than for lower-class Ss. Vigilance declined over time for all Ss. Reading ability and interstimulus interval had no reliable effects. Reading ability differences, however, were confounded with differences in socioeconomic class. The use of vigilance as a measure of attentiveness to academic tasks is discussed. (16 ref)—W. R. Street.

9400. Cannizzaro, L.; Cecchini, M. & Musatti, T. (U degli Studi, Istituto Matematico Castelnuovo, Rome, Italy) [Operations and code in the operational growth of the child.] (Ital) *Archivio di Psicologia, Neurologia e Psichiatria*, 1975(Jan-Feb), Vol 36(1), 25-49.—Notes that codifications and operations, as viewed by J. Piaget, are tightly interwoven. However, during development there is a difference between the level of concrete operations and that of formal operations. This difference is considered to be a result of the learning of new codes that can be used to modify operational strategies. The capacity to perform an operation does not result from the presence of abstract logical structures, but depends on the quantity of information supplied and on the code by means of which the information is expressed.—L. L'Abate.

9401. Chu, Cheng-Ping. (National Taiwan U, Taipei) The development of differential cognitive abilities in relation to children's perceptions of their parents. *Cortex*, 1975, Vol 17, 41-61.—Studied 301 Chinese 4th, 5th, and 6th graders to investigate the relationship between a child's cognitive abilities and his relations to his parents. Independent variables used in the study were 10 scores of parent-child relations (e.g., loving, neglecting, rejecting), with separate mother and father forms. Dependent variables were 12 scores on tests of cognitive abilities. Ss were administered the California Short Form Test of Mental Maturity, Level II, and modified forms of the Parent-Child Relation Questionnaire (PCR) and the Torrance Tests of Creative Thinking. Results confirm the hypotheses that positive parent-child relations are positively related to the child's cognitive abilities and that negative parent-child relations are negatively related to the child's cognitive abilities. Age, sex, and culture also affected this relationship. It is pointed out that while the Chinese culture often neglects the father's

role in child-rearing practices, the present study indicates that the father had more meaningful effects on the child than the mother. Future research on parent education should investigate father-daughter and mother-son relations. (18 ref)—*Journal abstract*.

9407. Douglass, Lois. (Reiss-Davis Child Study Ctr, Los Angeles, CA) **How a child learns to talk.** *Reiss-Davis Clinic Bulletin*, 1975(Fal), Vol 12(2), 90-96.—Presents a description of the development of language using concepts from the fields of speech, language, psychology, and linguistics framed within the psychoanalytic model. Communication delays and disorders are discussed with reference to deviations in the affective developmental relationships between the mother and the child.—G. R. Alley.

9408. Downing, J.; Ollila, L. & Oliver, P. (U Victoria, Canada) **Cultural differences in children's concepts of reading and writing.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 312-316.—Previous research has indicated that children enter the task of learning to read in a state of cognitive confusion regarding the function and nature of the task. This study investigated the hypothesis that cultural differences in home background are an important influence in the development of children's understanding of the purpose of writing and their concepts of the language units employed in the written code. 92 non-Indian Canadian kindergartners were compared with 72 kindergartners from 2 Indian bands in which there is no tradition of literacy and a poverty of experiences of writing and formal concern with language analysis. On all 5 measures used (orientation to literacy, understanding literary behavior, technical language of literacy, visual letter recognition and letter-name knowledge, and initial phonemes) the Indian children scored significantly lower. They were less able to recognize literacy activities, less cognizant of their purpose, and had poorer technical knowledge of units of speech and writing. (24 ref)—*Journal abstract*.

9411. Elmas, Peter D. (Brown U) **Auditory and phonetic coding of the cues for speech: Discrimination of the [r-l] distinction by young infants.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 341-347.—In a study employing 64 2-mo-old and 64 3-mo-old infants, Ss were found to discriminate stimuli along the acoustic continuum underlying the phonetic contrast [r] vs [l] in a nearly categorical manner. For an approximately equal acoustic difference, discrimination, as measured by recovery from satiation or familiarization, was reliably better when the 2 stimuli were exemplars of different phonetic categories than when they were acoustic variations of the same phonetic category. Discrimination of the same acoustic information presented in a nonspeech mode was continuous, that is, determined by acoustic rather than phonetic characteristics of the stimuli. Findings are discussed with reference to the nature of the mechanisms that may determine the processing of complex acoustic signals in young infants and with reference to the role of linguistic experience on the development of speech perception at the phonetic level. (29 re)—*Journal abstract*.

9418. Golinkoff, Roberta M. (U Delaware) **Semantic development in infants: The concepts of agent and recipient.** *Merrill Palmer Quarterly*, 1975(Jul), Vol 21(3), 181-193.—Studied the ability of infants to nonverbally distinguish between agent and recipient of action. 48

male infants, ages 14-24 mo, viewed 6 films of action sequences. A "standard" sequence showed a man pushing away a woman or a table. The standard sequence was presented 3 times. A reversal of the standard sequence followed each presentation. The reversals showed either reversed left-right positions, reversed actor-recipient roles, or reversed role and position. Analysis of differences in length of eye fixation times did not show hypothesized effects that could be attributed to awareness of actor-recipient differences. The equivocal nature of the results is discussed and suggestions for further development of methodology are presented. (27 ref)—*W. R. Street*.

9428. Kleber, Eduard W. & Schwarzer, Christine. (Pädagogische Hochschule des Saarlandes, Saarbrücken, W Germany) **[Achievements of preschool children in**

concentrating on an age-adequate task.] (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(4), 212-220.—160 preschoolers were told to mark certain pictured objects with a line and all the other simple figures in the picture with a stop sign. The retest reliability was .91. 153 made 1 error or none during the 1st 4½ min. The difference in favor of those older than 6 yrs was insignificant. The average achievement of 82 girls was significantly higher than boys', their average error percentage very significantly lower. There was a slight increase in errors during 15 min of working time. The amount done correlated with the Peabody Picture Vocabulary Test .08, with the Columbia Mental Maturity Scale (CMMS) .11 Errors correlated .25 and .35 with both. Teachers underrated preschoolers' ability to concentrate. Their rating of this ability correlated .23 with the test result, .37 with the result of the CMMS. (English summary) (15 ref)—*W. O. Horn*.

9431. Kopasová, Dorota. (Výskumný ústav deskej psychológie a patopsychológie, Bratislava, Czechoslovakia) **[Aspects of speech development in preschool children.]** (Slovak) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(1), 31-42.—Employed the Illinois Test of Psycholinguistic Abilities to determine the level of speech development in preschool children 3, 4, and 5 yrs old. The relationships between speech level, intellectual level, and the type of collective education provided were examined. The level of speech development was the same for boys and girls; it increased with age and with intellectual level. Children staying in kindergarten on a weekly basis tended to show delayed speech development more than those who stayed on a daily basis. —*English summary*.

9432. Langford, P. E. & George, Sandra. (U London, Birkbeck Coll, England) **Intellectual and moral development in adolescence.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 330-332.—65 females, ages 12-15 yrs, were presented with 4 of L. Kohlberg's (see PA, Vol 38:5739) "moral dilemma" stories and B. Inhelder and Piaget's (1958) "floating bodies" problem. The relation between level of moral judgment and formal operations was found to change from negative in Kohlberg's earlier stages to positive for the later stages of moral judgment. It is concluded that reasoning at the stage of formal operations is a precondition for progress to Kohlberg's Types 5 and 6 in moral judgment. —*Journal abstract*.

9442. McGarrigle, James & Donaldson, Margaret. (U Edinburgh, Scotland) **Conservation accidents.** *Cognition: International Journal of Cognitive Psychology*, 1974-75, Vol 3(4), 341-350.—Investigated the conflicting results of studies with children on Piaget's conservation tasks which indicate that the child can, in some contexts, demonstrate knowledge about the invariance of certain attributes of objects while at the same time he fails to exhibit such knowledge in the typical Piagetian situation. 80 4-6 yr olds were tested on length and number conservation, both when the transformation occurred because of a direct action by the E and when it happened "accidentally" as the by-product of an activity directed towards a different goal. 50 Ss conserved when the transformation was "accidental," whereas only 13 were successful when it was intentional. Results are interpreted as evidence that characteristics of the E's behavior, in particular his actions towards the task materials, can influence children's interpretation of utterances by suggesting the E is thinking about a different attribute from that specified linguistically. It is suggested that traditional procedures may underestimate children's cognitive abilities. (French summary) (19 ref)—*Journal abstract*.

9447. Moskowitz, Breynne A. (U California, Los Angeles) **The acquisition of fricatives: A study in phonetics and phonology.** *Journal of Phonetics*, 1975(Jul), Vol 3(3), 141-150.—Distinguishes between the acquisition of phonetics and of phonology and discusses their interaction and ways in which they interfere with each other. At the earliest stages of language acquisition the child's phonetic abilities are considerably greater than is indicated by the majority of his pronunciations, because the child's restricted phonological knowledge limits the phonetic realization possibilities of his systematic speech. At later stages, learned phonetic limitations obscure true phonological contrasts, which cannot be observed in production due to the absence of distinct phonetic reflexes for distinct phonological segments. Data from earlier studies on the acquisition of English fricatives for several children are given and are analyzed separately for phonological and phonetic aspects. Phonologically, the order of acquisition is relatively transparent; voiceless fricatives are all learned before voiced ones. Phonetically, the fricative data seem to present a chaotic picture. The situation is resolved when several relevant factors are taken into account, among them: the process of phonetic suppression, the simultaneous learning of morphology, the conflicting demands of acoustic and articulatory criteria in the selection of phonetic substitutions, and the asymmetry of distinctive feature learning.—*Journal abstract*.

9450. Nyström, Mats; Hansson, Monica B. & Marklund, Kjell. (Lund U, Sweden) **Infant preference for intermittent light.** *Psychological Research Bulletin*,

Lund U. 1975, Vol 15(4), 11 p.—Obtained systematic fixation behavior for 5 frequencies of intermittent light presented in pair combinations to 20 infants in 2 equal groups, 4-8 and 8-12 wks, respectively. The fusion frequency 100 Hz induced less visual fixation than the other 4 frequencies (1, 5, 10, and 20 Hz) among which a higher one generally evoked longer fixations. Results support the assumption that the same type of proximal stimulation underlies infant preference for complexity, moving objects, and intermittent light. Furthermore, the data are in line with a developmental frame of reference in which preference for spatial as well as temporal complexity is governed by a principle of age-related optimal stimulation. (U Genova, Facolta' di Lettere e Filosofia, Italy) [Perceptual recognition in preschool children from different sociocultural levels.] (Ital) *Neuropsichiatria*, 1974(Jan-Jun), Vol 30(1-2), 85-98.—Compared the performance of 121 male and 123 female nursery school children of 3 age groups (3, 4, and 5 yrs) and 2 sociocultural levels (defined by type of neighborhood, parents' educational level, and fathers' occupational level) in recognizing incomplete drawings of familiar objects at 4 successive levels of completeness. The effect of training (i.e., supplying the name of the object when S failed to recognize it) was also studied. Correct recognition level was significantly higher in middle- than in lower-class Ss throughout, with spontaneous recognition following analogous developmental trends by age in both groups. Increments deriving from training were similar in all subgroups, with middle-class Ss retaining their initial advantage after training. Since disadvantaged Ss reached the pretraining level of middle-class Ss after training, it is argued that the initial sociocultural class gap could be eliminated by providing training only to the lower-class children. (U Novi Sad, Inst za Lingvistiku, Yugoslavia) *Some features of dialogue between twins*. *International Journal of Psycholinguistics*, 1975, No 4, 33-51.—Analyzed features of verbal communication between 3 pairs of different-sexed twins between the ages of 1.1 and 2.5 yrs who lived in similar social conditions. Analyses of deep structure in the dialogs provided evidence of the true syntactical competence of twins. The communication principle of theme/rheme was introduced in the analysis of the surface structure of the dialogs. The nature of the communication appeared to change with age, and there was also evidence of several types of dialogs, including (a) when twins create the same utterance together, (b) when they correct each other, (c) when they quarrel, (d) when they play verbal games together, and (e) when one repeats what the other said. It is suggested that in the first 2 types of dialogs, the relationship between the co-speakers during communication is much closer than it is between individual children of the same age. (Queen's U, Belfast, Northern Ireland) **Developmental and social interaction in categories of word-definition.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 268-278.—Investigated the hypothesis that on a test of vocabulary definition, children of nonmanual and manual fathers would differ progressively with age in total number of vocabulary responses and in number of abstract-type responses. Responses to the Terman-Merrill Vocabulary Test, Form L-M, of 100 children at each of 5 age levels from 6 to 14 yrs in a judgment sample of 65 Northern Ireland schools were scored for 10 categories of definition. Factor analysis confirmed that 2 categories, synonym and explanation, might be combined as abstract responses. Ordered stepwise regression confirmed the significance, as hypothesized, of age, occupation, and joint age-by-occupation effects, in that order, for abstract and total responses. The joint effect was greater for abstract responses, and showed that Ss of nonmanual fathers differed progressively with age from Ss of manual fathers for those forms of definition, such as synonyms and explanations, that showed the strongest pattern of development with age. 9480. Cullen, James. **The needs of the child.** *Mental Health in Australia*, 1974(Aug), Vol 1(2), 48-51.—Points out that the word "need" has no meaning unless it is related to a purpose which is served by satisfying that need. In any culture, the view of what a child needs will be determined by the values of that culture. Beyond the basic physical requirements (for adequate food, water, and shelter) lies a range of other needs which are more or less indispensable. It is felt that in today's world the infant and child needs warmth, affection, and attachment to caring adults, to develop trust in others, and healthy family relationships. Strong emphasis is placed on the need for education in sensory awareness and social reality, for training in emotional sincerity, and for the development of independence.—*A. F. Vitiello*.

9481. Day, Richard; Boyer, L. Bryce & de Vos, George A. (U California, Berkeley) **Two styles of ego development: A cross-cultural, longitudinal comparison of Apache and Anglo school children.** *Ethos*, 1975(Fal), Vol 3(3), 345-379.—Responses by Anglo and Apache adolescents to the Rorschach show, for most Ss in each group, patterns similar to those of their childhood records gathered earlier. Most of the Anglo adolescents showed a pattern consistent with a theoretical course of "normal" ego development. Conversely, most of the Apache records show a long-term convergence around a pattern of inconsistent ego development. The Apache protocols seem to indicate a generalized, long-term failure of the sociocultural environment to fulfill the growing child's need for a secure, productive, and meaningful role in adult society. (31 ref)—*R. Brislin*.

9482. Denzin, Norman K. (U Illinois) **Play, games and interaction: The contexts of childhood socialization.** *Sociological Quarterly*, 1975(Fal), Vol 16(4), 458-478.—A review of classical and contemporary theories of childhood play suggests that, with a few exceptions, students of play and games have tended to divorce these interactional forms from the interpersonal contexts that

produce them. It is argued that all forms of play "teach" or socialize the young child into the illusory worlds of social reality. A symbolic interactionist conception of play, games, work, and socialization is offered. Naturalistic data drawn from the observation of children ages 3 to 8 yrs are presented to support a processual model of socialization and interaction in early childhood. (Harvard U, Medical School, Boston) **On the development of the capacity to use transitional objects.** *Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 114-124.—Proposes that the conceptualization of transitional phenomena has enlarged our range of empathic appreciation of the processes by which individuation and self-generated activity emerge in the growing child. Some kinds of preparatory experiences that must occur for the development of meaningful transitional object usage are considered and case examples are provided.—*Journal summary.*

9485. Graudenz, Ines. (Deutsches Inst für Internationale Pädagogische Forschung, Frankfurt, W Germany) **[Self-perception and perception of maternal behavior of preschool children.]** (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(4), 203-211.—59 questions concerning self-esteem, self-confidence, self-reliance, emotional stability, extraversion, maternal support, and strength were answered by 129 preschool children. The split-half reliability of the subscales ranged between .28 for extraversion to .55 for emotional stability. Subscale intercorrelations ranged between -.34 to .45 with a mean of .21 (minus neglected). Self-confidence correlated .45 with perceived maternal support. The mothers were questioned using a scale measuring acceptance, friendliness, support, guidance, punitiveness, and sex education. Of 65 children who perceived their mothers as supportive, 41 mothers were in the less repressive and 24 were in the more repressive half. Children who are "lower class" (in terms of their parents' education) perceive mothers significantly more often as severe. 20% of 54 middle-class mothers and 68% of 75 lower-class mothers favored a more repressive education. (English summary) (23 ref) —*W. O. Horn.*

9486. Hammer, Signe. **Daughters and mothers: Mothers and daughters.** New York, NY: Quadrangle/The New York Times Book Co, 1975. xvi, 175 p. \$7.95.—Uses the experiences of a wide range of mothers and daughters to explore the relationship between them from the time before a daughter's birth, when the mother is beginning to realize what motherhood means to her, to adulthood, when what has passed between the 2 affects many of the choices each will make about her own life.

9503. Rahm, Dorothea. [The relationship between repressive educational attitudes and creativity.] (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(5), 259-269.—Tested 134 4th graders with the Progressive Matrices. 100 of the mothers returned a usable 65-item questionnaire measuring repressive educational tendencies. Two verbal and 2 figural subtests of Torrance were administered without time limit. 16 children with mothers answering strongly in the repressive direction were matched on sex, age, intelligence (Raven), and the mother's education with 16 children having mothers of low repressiveness. Significant differences in means were found only for originality (not for fluency, flexibility, or elaboration), with a significant negative correlation between repression and originality. Mother's education was not significantly related to her repressive tendencies or to the creativity of the children. Significant positive correlations with age and intelligence were found, but not with sex. (English summary) (32 ref)—*W. O. Horn*.

9505. Rubin, Kenneth H. & Maioni, Terrence L. (U Waterloo, Canada) **Play preference and its relationship to egocentrism, popularity and classification skills in preschoolers.** *Merrill-Palmer Quarterly*, 1975(Jul), Vol 21(3), 171-179.—Related qualitative differences in children's play participation to indices of the child's (a) ability to take the role of another, (b) classification skills, and (c) popularity. The free play of 16 4-yr-old preschoolers was observed for 1 min on 20 consecutive days. Role-taking skill, requiring low egocentricity, was measured by 2 means: the ability to portray the emotions of others and the ability to describe the visual appearance of an object from a different viewing point. A 16-item task measuring classification skill and popularity was determined by friendship choices. Participation in repetitive movement play was negatively related to role-taking, classification, and popularity, while participation in dramatic play was positively related to these variables. It is suggested that the requirements of dramatic play facilitate the decline of egocentricity. (17 ref) *W. R. Street*.

9508. Savitsky, Jeffrey C. & Watson, Mary J. (Purdue U) **Patterns of proxemic behavior among preschool children.** *Representative Research in Social Psychology*, 1975, Vol 6(2), 109-113. 80 preschool children were paired into similar age and sex dyads and their proxemic behavior recorded while they played. Analyses were performed to determine both the patterns of proxemic behavior that characterized an individual child's play as well as the effects of age and sex on proxemic behavior within this age group. Little effect was found for either age or sex, but results suggest that both male and female children showed patterns of proxemic behavior that were similar to patterns observed among adults in previous studies. Findings indicate that patterning of proxemic behavior is (a) evidenced quite early and (b) seems to accomplish the same intimacy regulating functions among preschoolers as among adults.—*Journal abstract*.

9513. Thomas, Margaret H. & Drabman, Ronald S. (Florida Technological U) **Tolerance of real life aggression as a function of exposure to televised violence and age of subject.** *Merrill-Palmer Quarterly*, 1975(Jul), Vol 21(3), 227-232. Replicates R. Drabman and M. Thomas's (see PA, Vol 52 9879) study of increased tolerance for real violence in children repeatedly exposed to filmed violence. Children in the present study varied in age (1st or 3rd grade), sex, and film exposure. There were 10 Ss in each cell of the $2 \times 2 \times 2$ design. The 15 min aggressive film showed excerpts of a popular television show depicting 6 killings and other violent acts. The nonaggressive film showed 15 min of a baseball game. After viewing a film, each S was asked to monitor the behavior of other children and report any violence. 3rd grade Ss who had viewed the violent film were slower to report real violence than 3rd graders who had seen the nonaggressive film. 1st graders were significantly slower to respond, regardless of film treatment. There were no sex differences in responsiveness.—*W. R. Street*.

9516. Wallerstein, Judith S. & Kelly, Joan H. (U California, School of Social Welfare, Berkeley) **The effects of parental divorce: Experiences of the preschool child.** *Journal of the American Academy of Child Psychology*, 1975(Aut), Vol 14(4), 600-617. Investigated the differential responses of children of various ages to

divorce-related family change. 34 preschoolers (ages 2½-6 yrs) and the members of their 27 families were individually interviewed in 4-6 sessions and then reinterviewed 1 yr later. Independent information was obtained from the school. Psychological deterioration was seen in the behavior and function of 15 of the children, and a diminution in the quality of the mother-child relationship was apparent in half of the families. Preventative measures which can be taken to avert psychological problems are discussed.—R. M. Cohen.

9518. Zillmann, Dolf & Bryant, Jennings. (Indiana U, Inst for Communication Research) **Viewer's moral sanction of retribution in the appreciation of dramatic presentations.** *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 572-582.—Developed 3 versions of an audiovisually presented fairy tale, which involved provocation and retaliation as the central theme. Relative to the provocation, retaliation was too mild, equitable, or too severe. 60 children at the developmental stages of expiatory retribution (4-yr-olds) and equitable retribution (7-8 yr olds) served as Ss. Appreciation of the presentation was measured in facial displays, structured interviews, and ratings. For Ss at the stage of expiatory retribution, appreciation increased with the severity of the retaliatory acts. Ss at the stage of equitable retribution, in contrast, appreciated equitable retaliation the most. At this stage, inequitable retaliation (too mild or too severe) impaired appreciation significantly. Findings are consistent with the proposal that the depiction of punitive, retaliatory activities will be enjoyed more, the closer they approximate the viewer's moral expectations.—*Journal abstract*.

9530. Kitsuse, John I. & Spector, Malcolm. (U California, Santa Cruz) **Social problems and deviance: Some parallel issues.** *Social Problems*, 1975 (Jun), Vol 22(5), 584-594.—Explores parallel developments in labeling theory and in the value-conflict approach to social problems. Similarities in their critiques of functionalism and etiological theory as well as their emphasis on the definitional process are noted. The failure of both formulations to develop the distinctiveness of their common insight is examined; and an analysis of this failure is presented. (20 ref)—*Journal abstract*.

9531. Maykovich, Minako K. (California State U, Sacramento) **Correlates of racial prejudice.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1014-1020.—Based on the nationwide survey conducted by the National Opinion Research Center, 1,352 responses were examined to discover correlates of prejudice against Blacks. A heuristic separation of personality and sociocultural correlates and a 2-stage additive model were used while accounting for interaction at each level. On the social level, 3 interacting variables—region, age, and education—accounted for the greatest variance in

prejudice. Being a Southerner with less than a high school education was conducive to prejudice toward Blacks. On the other hand, if a person was outside the South where Blacks are less accepted, and if the former was young and college educated, he or she was less likely to be prejudiced. After the removal of the effect of social variables upon prejudice, the residual was examined in terms of psychological variables: dogmatism and anxiety. A prejudiced person was likely to have a rigid outlook in other areas but did not show anxiety any more than other people.—*Journal abstract.*

9536. Salter, Charles A. (U Pennsylvania) **A crosscultural study of attitudes towards a foreign nation as a function of status and other satisfactions.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5317.

9537. Sampson, Edward E. (Clark U) **On justice as equality.** *Journal of Social Issues*, 1975, Vol 31(3), 45-64.—Presents a critical reexamination of the equity theory conception of justice; the alternative, justice as equality, is introduced and examined, utilizing both theoretical and empirical materials to develop the argument. The implications of these 2 alternate perspectives on justice are examined with emphasis on the sociohistorical roots and present support for what is presumably a psychological principle (i.e., equity is the natural preferred state of human relationships). The role of social psychological research and theory in contributing to the existing system of support for the equity conception is noted, as is the potential value that derives from a consideration of conditions conducive to the alternative conception of relationships as based on equity. (2½ p ref)—*Journal abstract.*

9538. Sanderson, Stephen K. (U Nebraska, Lincoln) **Religion, politics, and morality: An approach to religious and political belief systems and their relation through Kohlberg's cognitive-developmental theory of moral judgment.** *Dissertation Abstracts International*, 1974(Jun), Vol. 34 (12-B, Pt 1), 6259.

9539. Schoenfeld, C. G. **Pacifism and the law: A psychoanalytically oriented inquiry.** *Journal of Psychiatry & Law*, 1975(Fal), Vol 3(3), 345-366. Discusses psychoanalytic discoveries regarding aggressivity, the viability of the belief of pacifists that it can be controlled by an effort of will, and the role of the superego in coping with aggressive and hostile urges. The

law—both by blocking and helping to express anger and hostility—is considered giving the superego much-needed help in this task. It is concluded that the law offers to pacifists and their doctrines the greatest chance of survival in today's world.—*Journal abstract.*

9540. Shiloh, Allon. (U South Florida) **Psychological anthropology: A case study in culture blindness?** *Current Anthropology*, 1975(Dec), Vol 16(4), 618-620.—Argues that psychological anthropologists have failed to analyze genocide as a major area of interest in human behavior. The case of the German method of genocide is cited as a particularly vivid manifestation of this behavior. However, in spite of detailed records kept by the Germans on the strategies used in effecting their goals, few analyses have been made. Leading introductory textbooks were examined, and it was found that none analyzed the Nazis and their genocidal behavior.—*M. E. Ponsel.*

9541. Stein, David J. (California School of Professional Psychology, San Francisco) **The phenomenology of resettlement: An exploration into the experiences of Chinese immigrants in San Francisco.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3477.

9542. Straus, Audrey. **Changing attitudes toward blindness: A role-playing demonstration for service clubs.** *New Outlook for the Blind*, 1975(Nov), Vol 69(9), 407-409.—Designed a short program to improve attitudes toward blind persons and to correct misinformation, and presented it to 13 Lions and Rotary Clubs. A role-playing demonstration with blindfolded members of the audience was followed by a discussion period. Questionnaires were administered before each presentation and 1-2 mo later, and showed significant improvements in those attitudes in which blind people are viewed as helpless, inferior, and dependent. Improvements in the participants' knowledge about blind people did not occur to the extent expected.—*Journal abstract.*

9543. Walster, Elaine & Walster, G. William. (U Wisconsin, Madison) **Equity and social justice.** *Journal of Social Issues*, 1975, Vol 31(3), 21-43.—Presents a framework for understanding recent theories and research on social justice. Equity theory is reviewed, the Aristotle's concept of 2 major types of social justice (equal justice and distributive or proportional justice) are examined. The issues involved in the equality-proportionality controversy are also discussed, and 4 general variables that probably affect willingness to apportion resources equally vs proportionally in ambiguous situations are identified: time constraints, communication costs, potential benefits, and significance for future decisions. The impact of power on society's definition of equity and "perfect social justice" is also considered. (4 p ref)—*Journal abstract.*

9544. Weltzman, Lenore J. (Columbia U) **Social suicide: A study of missing persons.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5356.

Social Structure & Social Roles

9545. Barkow, Jerome H. (Dalhousie U, Halifax, Canada) **Prestige and culture: A biosocial interpretation.** *Current Anthropology*, 1975(Dec), Vol 16(4), 553-572.—Examination of human prestige-striving from

a phylogenetic perspective suggests that it is essentially homologous with primate social dominance. In man, however, selection for "cultural capacity" has transformed striving for social dominance into striving to evaluate the self as being higher in rank than others, or into striving for self-esteem. Self-esteem is maintained through symbolic means, usually referred to as seeking "prestige." Some of the strategies used to obtain prestige and the rationalizations used by those who fail to achieve this prestige are examined. (92 ref) *Journal summary*.

9546. Berg, Nancy E. & Mussen, Paul. (U California, Berkeley) **The origins and development of concepts of justice.** *Journal of Social Issues*, 1975, Vol 31(3), 183-201.

—Discusses the origins and development of concepts of justice from 3 theoretical points of view—learning theory, psychoanalysis, and cognitive developmental theory. Cognitive developmental theory and research, particularly the work of Piaget and L. Kohlberg, has contributed most to the current understanding of children's ideas of justice and how these change and mature. Empirical data supporting the hypothesis that concepts of justice develop through a fixed and invariant sequence of stages are reviewed together with studies on the process of transition from one stage to the next. Knowledge about the course of development needs to be supplemented with information about the socialization process as antecedents of mature concepts of justice and of behavior consistent with these concepts. (3 p ref) —*Journal abstract*.

9547. Blau, David. (Harvard U, Medical School, Boston) **On widowhood: Discussion.** *Journal of Geriatric Psychiatry*, 1975, Vol 8(1), 29-40.—Presents a critical analysis of P. R. Silverman's and A. Cooperband's ideas regarding widow-to-widow programs of mutual help (see PA, Vol 55:Issue 5). It is felt that these programs may underestimate or minimize the severity of grief and guilt reactions. Questions are also raised regarding the use of volunteer aides. What are the personalities, motivations, and methods of such workers? It is suggested that volunteers be trained to detect abnormal grief reactions and to refer clients to appropriate professionals. (15 ref) —S. Y. Moriwaki.

9557. Group for the Advancement of Psychiatry, Committee on the College Student. (New York, NY) **The educated woman: Prospects and problems.** *GAP Report*, 1975(Jan), Vol 9(92), 257 p.—Presents an historical review of the educated woman and examines numerous aspects of her current status. Her expectations, options, difficulties, and possible future development are discussed, and specific recommendations for social and institutional reform are suggested. (150 ref)—R. S. Albin.

9558. Hemmons, Willa M. (Case Western Reserve U) **Towards an understanding of attitudes held by the Black woman on the Women's Liberation Movement.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5359.

9559. Levin, Sidney. (Boston Psychoanalytic Society & Inst, MA) **On widowhood: Discussion.** *Journal of Geriatric Psychiatry*, 1975, Vol 8(1), 57-59.—Discusses H. Z. Lopata's concept of support systems (see PA, Vol 55:Issue 5), pointing out that society also has "nonsupport systems": restrictive attitudes which limit the opportunities for resolving tension. These attitudes are applied particularly to the bereaved and the elderly, who feel ashamed if they violate cultural rules of behavior. Because many people who need help adopt a passive or inhibited position about asking for it, professional workers must make active efforts to reach such people and help them overcome their shame resistance. Grief and "guilt" are examined briefly, and suggestions are made for ways to resolve the grief reaction.—S. Y. Moriwaki.

9560. Lopata, Helena Z. (Loyola U, Ctr for the Comparative Study of Social Roles, Chicago) **On widowhood: Grief work and identity reconstruction.** *Journal of Geriatric Psychiatry*, 1975, Vol 8(1), 41-55.

—Examines from a sociological perspective the process of "grief work" (adjusting to bereavement) by widows, drawing on the literature and on personal research. Studies of the support systems of widows in Chicago indicate that they experience and must cope with a series of difficult events both before and after the death. The most difficult period is not the initial bereavement, when the widow receives support from various social customs, but later, when she must move out of the widow role. The transitional period involves many components of identity change and is made difficult (a) by an ideology of "stages of grief" through which she is expected to move, if she cannot follow this pattern she feels rejected and self-accusing; and (b) by the fact that she has "no place to go" in a society where woman's place is centered around the marital role. Grief work is ended when the widow develops a modified identity in social roles and relations. (2 p ref)—*S. Y. Moriwaki.*

9563. O'Connell, James & Beckett, Paul A. (Ahmadu Bello U, Zaria, Nigeria) **Social characteristics of an elite-in-information: The case of Nigerian university students.** *British Journal of Sociology*, 1975(Sep), Vol 26(3), 309-329.—Studied the social characteristics and background of 919 students attending the Ahmadu Bello University in Nigeria, by administering a written questionnaire to stratified samples in 1970 and 1971. Results were analyzed to provide information about the formation of new elite groups in Nigerian society. The samples were not fully representative of the general population of Northern Nigeria, from which most of the students are drawn. Males and Christians, and higher income and status occupations, were overrepresented. Low income groups (e.g., farmers) were also overrepresented. Findings suggest that while the children of established elites were overrepresented, there was still a large degree of continuing open recruitment in terms of social background. (3 p ref)—*R. P. Abeles.*

9564. Osman, David L. (U Michigan) **Relative effects of intimacy upon environmental perception and adjustment: A comparative study of selected aged residents.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5314-5315.

9565. Penman, Robyn. (U Melbourne, Parkville, Australia) **Women's current and future role conceptions.** *Australian Psychologist*, 1975(Jul), Vol 10(2), 193-201.—Investigated the extent to which Australian women see themselves as traditionally or liberally oriented and how they evaluate these perceived role positions. Ss were 318 Australian women 21-60 yrs old, selected on the basis of socioeconomic status. More women held strong traditional beliefs about their role in the home and family than about their role in the workforce and community. There was a tendency for women to want to combine home and work duties. It is suggested that such a combination would lead to

problems which the women had little preparation to solve.—*J. C. Figurelli.*

9566. Rooney, James F. (U Pennsylvania) **Friendship and reference group orientation among skid row men.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5342.

9567. Rubin, Zick & Peplau, Letitia A. (Harvard U) **Who believes in a just world?** *Journal of Social Issues*, 1975, Vol 31(3), 65-89.—A review of research with the Belief in a Just World Scale indicates that many people believe that the world is a place where good people are rewarded and bad people are punished. Believers in a just world have been found to be more likely than nonbelievers to admire fortunate people and to derogate victims, thus permitting the believers to maintain the perception that people in fact get what they deserve. Everyone may have a version of the just world belief in early childhood (Piaget's "immanent justice"), but some people outgrow the belief quickly and some apparently never do. Suggestions for modifying the belief in a just world are offered, focusing on the socialization techniques employed by parents, teachers, religious institutions, and the mass media. 9570. Bolton, Ralph; Michelson, Carol; Wilde, Jeffrey & Bolton, Charlene. (Pomona Coll) **The heights of illusion: On the relationship between altitude and perception.** *Ethos*, 1975(Fal), Vol 3(3), 403-424.—A recent theory by M. Bornstein has suggested that there is a psychophysiological causal factor that accounts for both cross-cultural differences in color terminology and ethnic differences in susceptibility to visual illusions. New data are presented, with a reanalysis of Bornstein's data, to contrast his psychophysiological explanation with the ecological explanation, which emphasizes learning experiences in a person's environment. The new data consist of responses to visual illusions by 108 Ss, in 2 groups living in the Central Andes of Peru in 2 villages at greatly different altitudes. Results were those predicted by the ecological-learning explanation which tends to cast doubt on Bornstein's theory. (34 ref)—*R. Brislin.*

9571. Burdsal, Charles. (Wichita State U) **A factor analytic study of racial attitudes.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 255-259.—Designed and administered a racial attitude survey to 308 Whites and 147 Blacks in the Wichita, Kansas, area. A factor analysis was performed on 19 items, age, sex, and race yielding 2 specific (Sex, Genetics) and 5 common factors: (a) Race, (b) Relaxed Association vs Tense Isolation, (c) General Racial Tension, (d) Youthful Integration vs Aged Segregation, and (e) Separationist vs Desegregationist.—*Journal abstract.*

9574. Coleman, Charles J.; Toomey, William C. & Woodland, Richard L. (Rutgers State U) **Cognition, belief, and behavior: A study of commitment to a religious institution.** *Religious Education*, 1975(Nov-Dec), Vol 70(6), 676-689.—Studied 3 dimensions of religious commitment among 333 practicing Catholic students at a Catholic and a public college. The dimensions of cognitive continuance, adherence to church-expected beliefs, and behavioral commitment were interrelated, but the zero-order correlations tended to be small. Student-rated importance of religion in the parental home and attendance at a Catholic vs public college (as 2 measures of religious socialization) showed some correlations to the commitment measures but showed no systematic relationships. Results suggest a decline in commitment to the Catholic church in the last decade and are discussed in terms of varieties of commitment and institutional responses to declines in commitment.—R. D. Kahoe.

9575. Foster, Lella M. (U Illinois, Abraham Lincoln Medical School, Chicago) **The chaplain: Patient's advocate and institution's ombudsman.** *Journal of Pastoral Care*, 1975(Jun), Vol 29(2), 106-110.—Discusses adding the roles of advocate and ombudsman to that of the chaplain. Advocates represent the best interests of individuals in a situation where this is difficult for the individual alone. Ombudsmen troubleshoot within an institution to correct problems. It is suggested that chaplains should assess their ability to handle these roles and should develop opportunities to learn the skills required. (41 ref)—B. Smith.

9580. Jackson, Gordon E. (Pittsburgh Theological Seminary, PA) **Anxiety and the church's role.** *Journal of Religion & Health*, 1975(Oct), Vol 14(4), 231-241.—Describes 3 forms of anxiety and prescribes which form the church should attempt to deal with. Ontological anxiety is experienced by everyone, due to being alive, moving forward, feeling the threats of emptiness and meaninglessness, and the dread of death. It is due to being off balance at all times, the failure to obtain equilibrium. The individual usually deals with it by compulsively striving for possession of things. Guilty anxiety is

theological; it is "given by revelation before God." It is produced by feeling finitude and estrangement, and it usually leads to further commitment to material objects. Developmental anxiety is seen as failure to develop trust during a series of threatening situations as the individual grows into adulthood. The 3 forms of anxiety may interact to produce neurotic anxiety, which requires mental health treatment. It is suggested that preaching should involve the expression of love and healing, rather than the scolding found in much modern preaching; such methods offer preventive and supportive therapy and do not usurp psychological efforts.—F. Hardt.

9581. Kaplan, Howard B. (Baylor Coll. Medical School) **Black self derogation and residential mobility.** *Journal of Health & Social Behavior*, 1975(Sep), Vol 16(3), 283-290.—Studied the relationship between antecedent self-derogation and subsequent residential mobility among 67 Blacks. Results suggest that antecedent self-derogation decreases the probability of subsequent residential mobility, and antecedent residential mobility increases the probability of subsequent self-derogation. (27 ref)

9582. Lee, James L. (U Wisconsin, Madison) **Religious interests and the decision to persist in seminary training.** *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 283-287.—Administered the 11-scale Inventory of Religious Activities and Interests (IRAI) and a rating scale for measuring an individual's plans for future seminary attendance to 133 Catholic college seminarians. Ss were grouped as potential leavers, potential persisters, or undecided, according to their rating-scale scores, and these results were correlated with the IRAI scores for the 3 groups. Results indicate that the potential leavers were significantly lower than the persisters on the Evangelist, Spiritual Guide, and Priest subscales of the IRAI. Undecided Ss scored the same as leavers on the Evangelist scale, the same as persisters on the Priest scale, and between the persisters and the leavers on the Spiritual Guide scale.—B. McLean.

9583. Maduro, Renaldo J. (U California, Langley Porter Neuropsychiatric Inst, San Francisco) **Hoodoo possession in San Francisco: Notes on therapeutic aspects of regression.** *Ethos*, 1975(Fal), Vol 3(3), 425-447.—A case of hoodoo possession (roughly comparable to the more common "voodoo") is described in historical perspective, highlighting crucial psychocultural features of the psychotherapeutic process (culturally patterned transference-countertransference projections). The notion of cultural relativity is revived and demonstrated to be essential in the effective clinical diagnosis and treatment of an Afro-American woman. Possession-transference per se is viewed not only in terms of psychopathology, but as a culturally constituted healing situation (resource) in which therapeutic aspects of regression are enhanced. Psychological findings.]** (Czec) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(3), 229-246.—220 children born in 1961-1963 whose mothers had requested interruption of their pregnancies and had been refused were compared to 220 children from wanted pregnancies. The groups were matched for age, sex, number of siblings, birth order, mother's age, social position, completeness of the family, and father's educational level. Although the groups did not differ in heredity, or as to complications during pregnancy, childbirth, and early development, the "unwanted" children were more often ill and more often hospitalized, and were breast-fed for shorter periods. At preschool age they were considered more fretful and obstinate and in the 2nd grade they showed poorer academic progress, especially in their mother tongue, although their intelligence, as measured by the WISC, was equal to that of the control group. They were considered by mothers and teachers less conscientious in schoolwork and more irritable and excitable; they were more often rejected by their peers and were less able to adjust to stress situations.—*Journal summary.*

9632. Silverman, Phyllis R. & Cooperband, Adele. (Harvard U, Medical School, Lab of Community Psychiatry, Boston) **On widowhood: Mutual help and the elderly widow.** *Journal of Geriatric Psychiatry*, 1975, Vol 8(1), 9-27.—Discusses mutual contacts among elderly widows as a way of helping them adjust to grief and new social situations. The efforts of 1 widow during a year

and a half are described. Under sponsorship of a professional agency, she attempted to contact all widows 50 yrs and over in a Jewish community. Of the 93 widows available, 50 were seen, 22 did not need services, and 21 refused. Those not needing help were more likely to be working, in good health, with more stable living conditions and adequate friendships, and able to manage their reactions to their husbands' deaths. Those accepting help were more likely to live alone and to express their need to meet people like themselves and maintain an active, involved life. Mutual help in widowhood adjustment provides peer relations and role models for widows to cope with concrete and specific difficulties.—*S. Y. Moriwaki.*

9633. Smith, Eleanor W. (U California, San Francisco) **The role of the grandmother in adolescent pregnancy and parenting.** *Journal of School Health*, 1975(May), Vol 45(5), 278-283.—Discusses the changes, problems, needs, and support in the relationships between a mother and her pregnant teenage daughter as the pregnancy progresses through delivery and the mother becomes a grandmother. Drawing on the literature and personal experience with pregnant adolescents, the discussion focuses on (a) initial reactions of the mother, (b) early steps toward solving some of the problems presented by the pregnancy, (c) the desirability of involving the mother early in her daughter's pregnancy, (d) the developing closeness between the mother and daughter later in the pregnancy, and (e) the developing grandmother-mother-child relationship.—*J. D. Pauker.*

9634. Su, Chien-Wen. (National Taiwan Normal U, Taipei) **[Parental child-rearing practices as related to moral behavior in adolescence.]** (Japn) *Acta Psychologica Taiwanica*, 1975, Vol 17, 109-124.—Assessed 7th-grade children on several dimensions of moral behavior (e.g., guilt intensity, resistance to temptation, and moral judgment orientation) by means of story completion tests and peer nomination. Parental discipline and childrearing practices were also measured by a parent-child relations questionnaire. Extreme groups were found along each moral dimension, and they were compared on measures of parental discipline and patterns of childrearing practices. Data were analyzed separately for middle- and lower-class males and females. Among middle-class Ss, advanced moral behavior in guilt intensity and honesty and consideration for others was associated with frequent use of induction and infrequent use of power assertion. Love withdrawal, on the other hand, was related infrequently to moral behavior. However, the same results were not found among the lower-class Ss. Regarding patterns of childrearing practices of parents, advanced moral behavior was associated with parental behaviors characterized as casual and loving; but negatively associated with neglecting and rejecting by parents. The same tendency was found both for middle- and lower-class Ss. (16 ref)—*English summary.*

study. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4064 4065.

9637. Yang, Kuo-Shu. (National Taiwan U, Taipei) An analysis of direct questioning and pictorial thematic interviewing as two methods of measuring ideal family size and son preference. *Acta Psychologica Taiwanica*, 1975, Vol 17, 85-103.—Evaluated the effects of differences in wording among various direct questions on the respondent's fertility-related responses and examined the differences between preferences in the number and sex of children obtained by the direct-questioning method and those by the pictorial thematic interviewing. 161 native Chinese husband/wife pairs were individually interviewed. The major findings were: (a) While the direct question worded with a respondent-directed referent gave a greater mean of ideal family size than did the direct questions with an other(s)-directed referent, the latter type of questions tended to give comparable ideal numbers of children whether the referent was specified as an individual or a group, whether a reference to some point of time was made, or whether the referent had a close relationship with the respondent. (b) There was a tendency for the 2 sets of measures of ideal family size and son preference obtained by direct questioning and thematic interviewing to positively correlate with each other. (c) The means of ideal family size obtained by the direct questions phrased with an other(s)-directed referent were comparable to those obtained by the corresponding thematic questions.—*Journal abstract*.

9638. Ziatek, Krystyna. [Psychological problems of adoption.] (Polh) *Psychologia Wychowawcza*, 1974(Jan-Feb), Vol 17(1), 63-76.—Surveys the research (1948-1970) on the problems of adopted children and their adoptive families. 3 basic problems are identified: (a) the effect of deprivation of maternal ties, (b) prognostic testing for qualifying babies for adoption, and (c) the mental level and personality adjustment of adopted children.—H. Kaczkowski.

Political & Legal Processes

9640. Dix, George E. (U Texas, Austin) Determining the continued dangerousness of psychologically abnormal sex offenders. *Journal of Psychiatry & Law*, 1975(Fal), Vol 3(3), 327-344.—Observations by a legally trained observer were made of decisions concerning whether psychologically abnormal sex offenders committed as dangerous were still dangerous. The decision was found to be influenced by the offender's willingness to admit guilt and responsibility, and by his fantasies of future offenses. It was also affected by the offender's behavior in the institution, the duration of institutionalization, the seriousness of the offense, and changes in the situation to which the offender would be discharged. The reliance upon a conceptualization of antisocial conduct as a response to stress and to factors only indirectly if at all related to an objective standard of continued dangerousness raises doubts concerning the propriety of programs that make continued institutionalization de-

pend upon a professional determination of continued dangerousness.—*Journal abstract*.

9641. Goldman, Jacquelin; Maitland, Karen A. & Norton, Pennie L. (U Florida) Psychological aspects of jury performance. *Journal of Psychiatry & Law*, 1975(Fal), Vol 3(3), 367-379.—40 psychology undergraduates were assigned to juries based on their Moral Judgment Scale scores. The Internal, Powerful Others, and Chance Scales and the Multiple Affect Adjective Check List were also administered. Ss were seated in a courtroom, where a moot court trial of a case of criminal insanity was enacted by law students. Two juries deliberated in separate chambers. The control jury registered verdicts individually, were retested, and dismissed. The experimental juries registered verdicts individually before deliberation and were retested after deliberation. Results indicate Ss became more anxious and less hostile as a result of the trial. Ss whose verdicts were consistent throughout had a significantly higher initial and posttest moral judgment.—*Journal abstract*.

9642. Knutson, Jeanne N. (U California, Los Angeles) Personality correlates of political behavior: A longitudinal analysis. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3468.

9643. Laves, Rona G. (Mt Carmel Guild Community Mental Health Ctr, Newark, NJ) The prediction of dangerousness as a criterion for involuntary civil commitment: Constitutional considerations. *Journal of Psychiatry & Law*, 1975(Fal), Vol 3(3), 291-326.—Views involuntary civil commitment as an adversary procedure, since the individual committed is deprived of fundamental civil liberties. The civil commitment hearing must meet the standard of proof required in criminal trials by substantive due process; civil commitments which are based on the predictions of psychiatrists are a denial of 14th amendment safeguards, since the state of the science does not qualify the psychiatrist as an expert witness. A reevaluation of current commitment practices is recommended, and psychiatrists are urged to examine the ethical ramifications of their continuing participation in such procedures.—*Journal abstract*.

9644. Pannor, Reuben & Evans, Byron W. (Vista Del Mar Child-Care Service, Los Angeles, CA) The unmarried father revisited. *Journal of School Health*, 1975(May), Vol 45(5), 286-291.—Discusses the practices of social agencies in the light of laws requiring the father's involvement in decisions about his out-of-wedlock child. The child's best interests are protected by taking into account the interests of both parents as well.—J. D. Pauker.

9645. Unger, Roberto M. (Harvard U, Law School) Knowledge and politics. New York, NY: Free Press, 1975. ix, 336 p. \$12.95.—Critically examines the common premises of liberal psychology and liberal political theory. A theory of the self, stressing one's relationship to nature, other people, and one's work, is presented as an alternative to more traditional views of personality. This theory is used to illustrate a way the antagonism between autonomy and community might be resolved.

Psychosexual Behavior & Sex Roles

9646. Apperson, Jean. (Michigan State U) Sex, self-esteem and psychological motivation for sexual behav-

ior. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6205.

9647. **Beasley, Ruth.** *Current status of sex research.* *Journal of Sex Research*, 1975(Nov), Vol 11(4), 335-347. —Discusses various types of sex research, including studies of family planning, reproduction, sex education, homosexuality, sex therapy, and gender and sex roles. Despite the increase in data, sex research has yet to mature into an integrated scientific discipline, and there is an urgent need to disseminate the information already available.—*E. B. Jaffa.*

9648. **Bishop, Jeffery D.** (Cornell U) *The motive to avoid success in women and men: An assessment of sex-role identity and situational factors.* *Dissertation Abstracts International*, 1974(Jun), Vol. 34 (12-B, Pt 1), 6256-6257.

9649. **Boyce, John & Benoit, Cheryl.** (State U New York, Downstate Medical Ctr, Brooklyn) *Adolescent pregnancy.* *New York State Journal of Medicine*, 1975(May), Vol 75(6), 872-874.—Interviewed 250 sexually active adolescent girls to determine (a) personal and family characteristics, (b) sexual and contraceptive history, (c) attitude toward out-of-wedlock pregnancies, and (d) future educational and contraceptive plans. 100 Ss intended to deliver their babies, 100 chose abortion, and 50 control Ss had experienced intercourse but had not conceived. Ss were permanent urban dwellers; 80% had lived in Brooklyn for more than 2 yrs. 30% of the delivery group had not completed elementary school. Fewer than 1/3 of the homes had both parents; half were headed by the mother. Dating for all groups began about 14 and intercourse about 15. Fewer than 10% of the Ss were using contraceptives at the time of conception. Reasons for accepting or rejecting contraceptive devices involved ease, safety, and reliability (as compared to histories of complications of friends or relatives) and the advice of partners. Out-of-wedlock pregnancy was not considered a social stigma by the girls, their parents, or their partners. Most planned on returning to school and on using contraception in the future. Implications for action are given.—*P. R. Sweet.*

9650. **Broude, Gwen J.** (Harvard U) *Norms of premarital sexual behavior: A cross-cultural study.* *Ethos*, 1975(Fal), Vol 3(3), 381-402.—Investigated correlates of premarital sexual behavior across cultures. Regression analysis showed that high (or low) accessibility of caretakers for children is strongly associated with permissiveness toward premarital sex (or restrictiveness). Class stratification and cultural complexity are also good predictors, indicating that restrictiveness has different origins in different social contexts. This is not surprising since the diversity of native explanations for restrictiveness would lead to the expectation that no one social structural or psychological factor will explain norms of premarital sexual behavior in all societies. These 3 predictors account for only 33% of the total variance, showing that studies of restrictiveness have not isolated all the reasons for premarital sexual behavior. (19 ref)—*R. Brislin.*

9651. **Brown, Marvin & Amoroso, Donald M.** (U Saskatchewan, Saskatoon, Canada) *Attitudes toward homosexuality among West Indian male and female college students.* *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 163-168.—Measures of attitudes

toward homosexuality, sexual liberalism-conservatism, and sex guilt, previously given by J. Dunbar et al (see PA, Vol 51:997) to Canadian and Brazilian samples, were administered to 69 male and 51 female West Indian college students. The West Indian males scored significantly more anti-homosexual than the Canadians and significantly less so than the Brazilians. In all other respects the pattern of results was very similar in the 3 countries. W. Churchill's (1967) hypotheses relating cultural sex-negativism, sex-role stereotyping, and anti-homosexual prejudice were again supported. West Indian females scored less anti-homosexual and less guilty about sex than the males. In all other respects the male and female results were very similar.—*Journal abstract.*

9652. **Bullough, Vern L.** *Sex and the medical model.* *Journal of Sex Research*, 1975(Nov), Vol 11(4), 291-303.—Traces the history of the medical model of sexuality and contends that this model has less validity for dealing with sexual behavior than a social and behavioral science model. (36 ref)—*E. B. Jaffa.*

9653. **Costrich, Norma et al.** (Temple U) *When stereotypes hurt: Three studies of penalties for sex-role reversals.* *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 520-530.—Reports 3 studies with a total of 242 undergraduates that demonstrate penalties for sex-role reversals. In each study, Ss evaluated men and women who behaved either in line with sex-role stereotypes or counter to them. Results show that popularity ratings and perceived psychological adjustment of both passive-dependent men and aggressive-assertive women were adversely affected. Findings are discussed in terms of recent theories of women's achievement motivation. (17 ref)—*Journal abstract.*

9656. **Finger, Frank W.** *Changes in sex practices and beliefs of male college students: Over 30 years.* *Journal of Sex Research*, 1975(Nov), Vol 11(4), 304-317.—Compared the sex beliefs and practices of male college students, surveyed during the years 1967-1973, with the results of a similar study made in 1943-1944. It was found that (a) premarital heterosexual experience had risen from 45% of Ss in 1943-1944 to 75% in 1969-1973, (b) the number of sexual partners tended to be lower in the later study, and (c) homosexual behavior decreased from 27 to 14% during the period. (17 ref)—*E. B. Jaffa.*

9657. **Fisher, Robert L.** (U California, Berkeley) *An empirical typology of college women's personal role conceptions.* *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4660.

9658. **Gump, Janice P.** *Comparative analysis of Black women's and White women's sex-role attitudes.* *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 858-863.—An assessment of the sex-role attitudes (using

- J. P. Gump's Revised Fand Inventory) of 77 Black and 40 White female undergraduates refuted the characterization of the Black woman as matriarchal and the White woman as home centered and submissive. Black Ss, in comparison with White Ss, were more likely to define their identity with respect to the roles of wife and mother and were more home centered and more submissive. White Ss expressed significantly more interest in furthering their own development than in fulfilling the traditional role.—*Journal abstract.*
9659. Klerman, Lorraine V. (Brandeis U, Florence Heller Graduate School for Advanced Studies in Social Welfare) **Adolescent pregnancy: The need for new policies and new programs.** *Journal of School Health*, 1975(May), Vol 45(5), 263-267. Discusses changes which must occur in the structure and attitudes of American society for a move toward preventing early, frequent, or otherwise "inappropriate" (i.e., not necessarily unwanted) pregnancies. Program modifications to help already-pregnant women and young mothers to surmount social burdens and poverty are explored. It is suggested that strategies for change should attempt to achieve new roles and goals for young persons, a broader view of the role of women, and resolution of the moral conflict of the sexually active girl. Programs should be directed toward keeping teenage mothers in school, developing new patterns of education, and providing infant day-care centers.—*J. K. Pauker.*
9660. Levin, R. J. **Facets of female behaviour supporting the social script model of human sexuality.** *Journal of Sex Research*, 1975(Nov), Vol 11(4), 348-352. —Normal thigh and limb control exhibited by sexually mature females to prevent inadvertent crotch display can be dramatically abandoned in circumstances involving special dress conventions and in certain social settings. Major aspects of this complex behavior can best be explained by using the social script model of human sexual behavior.—*Journal abstract.*

(U Oregon) **An analysis of the attitudes toward sex held by junior and senior health and physical education majors enrolled in colleges and universities in the state of Virginia as measured by the Sex Attitude Inventory.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4460-4461.
9664. Sagarin, Edward. **Sex rearing and sexual orientation: The reconciliation of apparently contradictory data.** *Journal of Sex Research*, 1975(Nov), Vol 11(4), 329-334.—Discusses the contradictory results of 2 studies of psychosexual orientation: one found that sex of rearing was an important factor in determining the direction of erotic response, while the other found that it was not. Possible reasons for the contradiction are examined. (15 ref)—*E. B. Jaffa.*
9665. Schultz, George E. (Arizona State U) **Changing conceptions of masculinity and femininity.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3508-3509.
9666. Sitkin, Emily M. (Columbia U) **Measurement of prospective fantasy and other factors in pregnant Black teen-age girls.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4058.
9667. Wilson, Marilyn L. (U Northern Colorado) **A new female homosexuality scale.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4065.
9668. Zeldow, Peter B. (VA Hosp, Syracuse, NY) **Psychological androgyny and attitudes toward feminism.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 150. Administered the Bem Sex-Role Inventory and Spence and Helm Attitudes toward Women Scale to 50 male and 50 female undergraduates. Only males with a preference for the feminine sex role differed from the other sex and level-of-androgyny groups, in that they exhibited traditional, conservative attitudes toward the rights and roles of women in contemporary society.
9669. Zuckerman, Marvin; Tushup, Richard & Finner, Steven. (U Delaware) **Sexual attitudes and experience: Attitude and personality correlates and changes produced by a course in sexuality.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 7-19. Administered a battery of personality and sexual experience and attitude tests (e.g., the Suppression of Sex scale from the Parental Attitude Research Instrument, M. Zuckerman's Heterosexual and Homosexual Experience scales, I. L. Reiss's Social and Emotional Relationship scales, the Sensation-seeking Scale, the Personality Research Form, and the Personal Orientation Inventory) to 224 male and 331 female undergraduates enrolled in either a human sexuality or a personality psychology course (control). Males were more permissive in attitudes and had experience with a greater number of partners than females. Attitudes and experience were more highly related in females. Ss in the sex course were more permissive and experienced that Ss in the control course. The sexuality course appeared to have changed attitudes in both sexes, but changed behavior only in males, relative to changes in the control group. Religious attitudes and personality correlates of sexual attitudes and experience are reported; in general, sexual permissiveness and expression correlated with self-actualizing tendencies, particularly in females. (19 ref)—*Journal abstract.*

Drug & Alcohol Usage

9670. Argeriou, Milton. (Services for Traffic Safety Project, Boston, MA) **Daily alcohol consumption patterns in Boston: Some findings and a partial test of the Tuesday hypothesis.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1578-1583. Studied the daily alcohol consumption patterns of a representative sample of 444 Ss over 16 yrs of age. Data indicate that the consumption patterns of heavy and moderate drinkers were cyclical, corresponding to the observed pattern of alcohol-related homicide and traffic fatalities, with lowest level of consumption on Monday and the highest on Saturday.

9671. **Burkett, Steven R. & Jensen, Eric L.** (Washington State U) **Conventional ties, peer influence, and the fear of apprehension: A study of adolescent marijuana use.** *Sociological Quarterly*, 1975(Fal), Vol 16(4), 522-533.—Examined (a) the relationship between a belief in the certainty of apprehension and self-reported marijuana use; (b) the relative importance of this belief and ties to conventional others as sources of control; and (c) the extent to which involvement with other users is related to drug use. Findings suggest that both the belief examined and conventional ties, in this case to the family and school, serve as independent sources of control among the high school youth studied. (24 ref)

9672. **Cohen, Sidney (Ed).** (U California, Neuropsychiatric Inst, Los Angeles) **Inhalant abuse.** *Drug Abuse & Alcoholism Newsletter*, 1975(Oct), Vol 4(9), 3 p.—Discusses "huffing," the inhalation of volatile industrial solvents, a popular addiction among younger adolescents which has not yet been carefully studied. Reasons for the attractiveness of these substances are suggested, and their physical and psychological dangers are briefly described.

9673. **Davis, Carl S.** (Syracuse U) **A study of the relationships of value orientations, psychological health, marijuana use, and psychedelic use in a select population.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6379-6380.

9674. **Denson, R.; Nanson, J. L. & McWatters, M. A.** (MacNeill Clinic, Saskatoon, Canada) **Hyperkinesia and maternal smoking.** *Canadian Psychiatric Association Journal*, 1975(Apr), Vol 20(3), 183-187.—Compared the smoking habits of (a) mothers of hyperactive children helped by methylphenidate (18 boys and 2 girls, 5-8 yrs old); (b) mothers of 20 children retarded in reading performance; and (c) mothers of 20 normal children (who came to hospital emergency rooms because of minor accidents). All of the children were matched on sex, age, and social class. The mothers of the hyperactive children reported smoking 2-3 times as many cigarettes as the mothers of the reading-retarded or normal controls ($p < .05$). Reported cigarette consumption of the fathers showed no significant differences. Findings are consistent with the hypothesis that smoking during pregnancy is an important cause of the hyperkinetic syndrome. (25 ref) (French summary)—*F. Auld.*

9675. **Gorsuch, Richard L. & Butler, Mark C.** (U Texas, Arlington) **Initial drug abuse: A review of predisposing social psychological factors.** *Psychological Bulletin*, 1976(Jan), Vol 83(1), 120-137.—Reviews the literature and states that appropriate research describing initial use of illicit drugs suggests that disruption of normal child-parent relationships, lack of involvement in organized groups, and few effective peer relationships may have been predisposing factors in some individuals initiating use of illicit drugs. Research also suggests that socialization to nontraditional norms, parental modeling of licit and illicit drug use, involvement with drug-using peers, and positive experiences with drugs may have been important factors in initial use for other individuals. It is concluded that both theory and research need a clear distinction between the several paths leading to initial drug abuse, particularly since separate statistical

analyses may be necessary for people in each path. (3 p ref)—*Journal abstract.*

9676. **Higdon, Mary C.** (St Louis U) **Personality variables related to the development and maintenance of marihuana use.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4044.

9677. **Holland, Jimmie; Massie, Mary J.; Grant, Colin & Plumb, Marjorie M.** (Albert Einstein Coll of Medicine, Yeshiva U) **Drugs ingested in suicide attempts and fatal outcome.** *New York State Journal of Medicine*, 1975(Nov), Vol 75(13), 2343-2349.—In 385 suicide attempts the single drug most often used was barbiturates; the most frequent combination was barbiturates plus alcohol. Five cases were fatal, and in each of these glutethimide was present, singly or with another drug. (26 ref)

9678. **Irwin, Samuel; Hayes, Rexine M. & Grunden, Lee R.** (U Oregon, Medical School, Portland) **Awareness and creative choice: Alternatives to drugs.** *Contemporary Drug Problems*, 1975(Spr), Vol 4(1), 35-56.—Suggests interpersonal approaches in allowing youth to make creative choices which will enrich their lives and substitute for drugs. "Education for living" is to be accomplished by various techniques which are described, including relaxation, concentration, communication, and meditation.—*A. K. Hess.*

9679. **Jessor, Richard.** (U Colorado, Inst of Behavioral Science) **Predicting time of onset of marijuana use: A developmental study of high school youth.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 125-134.—Conducted a longitudinal study of 589 7th-9th graders to predict time of onset of marihuana use. Measures of 19 personality, perceived environment, and behavioral variables given in 1970 accounted for a significant amount of the variance in time of onset of use over the subsequent 2-yr period ($R = .61$ for males and $.44$ for females). "Growth curves" of the measures plotted over the study years show that the trajectory of social-psychological development varied depending on whether and on when onset of marihuana use occurred. Findings support the importance of the concept of deviance or transition proneness in the social-psychological framework as identifying a disposition toward development and change among adolescents. (19 ref)—*Journal abstract.*

9680. **Martino, Edward R.** (U Miami, FL) **Attitudes, beliefs, and behavior: A further test of Fishbein's model for reducing discrepancies.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4090.

9683. **Phillips, Billy U.; Bruhn, John G. & Gouin, Helen D.** (U Texas, Medical Branch, Galveston) **Internal-external control and drug usage patterns in drug education course participants.** *Drug Forum*, 1975, Vol 4(3), 217-232.—559 18-62 yr old participants in drug

education courses were given Rotter's Internal-External Control Scale and pre- and postcourse questionnaires to evaluate their experiences. Ss' occupations and personal histories of drug use were not related to changes in their learning priorities for drug education. Personal history of drug use was not related to prior experience in drug education. Drug usage patterns were significantly related to Ss' locus of control scores. Those who never used drugs (i.e., marihuana, hallucinogens, barbiturates, amphetamines, and opiates) were more internally controlled, and former users scored between the extremes. —*Journal abstract.*

9684. Russell, James A. & Mehrabian, Albert. (U California, Los Angeles) **The mediating role of emotions in alcohol use.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1508-1536.—A review of the literature on the relationship between alcohol and emotions, personality, environmental conditions, and behavior suggests that alcohol use is at least partially motivated by its emotion-altering effects. A suggested framework for examining the overall relationship of alcohol use and emotions is provided, in which an individual's emotional state is described in terms of 3 basic dimensions: pleasure-displeasure, arousal-nonarousal, and dominance-submission. A person's emotional state at any given time is due to (a) his emotional state before entering the drinking situation, (b) the emotion-eliciting qualities of the drinking situation, (c) his characteristic emotional predisposition, and (d) the dose of alcohol consumed. Hypotheses that can be derived from this framework are outlined and suggested for further research. (109 ref)—*L. Gorsey.*

9700. Kozlowski, Lynn T. & Schachter, Stanley. (Wesleyan U) **Effects of cue prominence and palatability on the drinking behavior of obese and normal humans.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1055-1059.—Examined the effects of cue salience and palatability (water temperature) on the water drinking of 80 obese and normal undergraduates. Obese Ss drank more than normal Ss when the water cue was prominent but did not do so when this cue

was remote. Palatability did not differentially affect the drinking behavior of obese and normal Ss. Results support the extension to nonfood stimuli of the hypothesis of the hyperreactivity of the obese to prominent cues. (17 ref)—*Journal abstract*.

Cooley.** *Sociological Quarterly*, 1975(Fal), Vol 16(4), 500-521.—Evaluates the importance of the concept of the other in sociology and social psychology and in the thought of Schutz, Mead, and Cooley. It is argued that the concept is not a fundamental part of the thought of Schutz, that it is used merely as a convenient loophole at various strategic moments in the argument, whereas in the work of Mead and Cooley it is conceived as an active entity that plays a crucial role in their theories of socialization and human conduct. The work of the labeling theorists is used to illustrate the value of the concept as used by Mead and Cooley. (2 p ref)—*Journal abstract*.

(U Arizona) **Contextual determinants of opinion judgments: Field experimental probes of judgmental relativity boundary conditions.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1047-1054.—In 4 field experiments employing 3 survey issues and a total of 770 college students, opinion judgments were obtained from no-influence control Ss and from experimental Ss who viewed the supposed judgments of others prior to responding. The extremity and variability of planted judgments were varied across experimental conditions. Judgments were massively influenced across wide social anchoring ranges for all issues, and evidence of contrast or boomerang effects was sparse. Anchor variability failed to affect judgmental conformity. Results are discussed in terms of their implications for social influence research and for opinion poll interpretations. (California School of Professional Psychology, San Francisco) **Monitoring verbal behaviors in a dyadic interaction.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 68-76.—Studied 3 monitoring techniques and 3 valences (social desirability) of self-selected, verbal target behaviors in 18 heterosexual dyads of college students. Self-monitoring had the same reactive effects in dyadic as has been found in single-person situations. The direction of change of the behavior from baseline to experimental session was influenced by the valence of the target behaviors. There were no differences between self-monitoring and obvious monitoring by an external agent, indicating that behavioral changes that accompany monitoring are due to reactive processes of being observed. Videotape self-monitoring prior to the experimental session reduced negative valence behavior more than self-monitoring and external-agent monitoring during the experimental session, indicating that the timing of monitoring may be important.—*Journal abstract*.

9719. Dietch, James & House, James. (Duke U) **Affiliative conflict and individual differences in self-disclosure.** *Representative Research in Social Psychology*, 1975, Vol 6(2), 69-75.—Studied the effect of individual differences in reported self-disclosure, a personality trait, in the context of an interview situation using 60 undergraduates. Interpersonal distance was manipulated, and its effects on amount of eye contact, intimacy of actual self-disclosures, and subjective reports of discomfort were examined. Consistent with theoretical predictions, self-disclosures were less intimate at a close interactional distance, although subjective reports of discomfort did not vary across conditions. A significant interaction between reported self-disclosure and interpersonal distance on the eye contact measure was found. Results support the notion that eye contact can serve multiple functions in social interaction: to mediate interpersonal intimacy, and/or serve as a "vigilance" device in potentially-threatening situations.—*Journal abstract*.
9720. Emiley, Stephen F. (Ctr for Child & Family Studies, Arlington Heights, IL) **The effects of crowding and interpersonal attraction on affective responses, task performance, and verbal behavior.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 267-278.—Assigned 48 male undergraduates (Exp I) and 144 male high school sophomores (Exp II) to high or low spatial density conditions and instructed them to construct, as a team, an erector set model within a 40-min period. High school Ss were assigned to high, middle, and low attraction groups on the basis of their ratings of their fellow classmates. Results indicate that Ss in both studies did not find those crowded conditions to be aversive or stressful or to influence their affective ratings of their fellow Ss. While density had no main effects on task performance, under middle attraction conditions performance was impaired as a function of density. Findings suggest that while crowding did not necessarily result in a stressful experience, both social and spatial elements were important in obtaining optimal group productivity. Overall, negative, and neutral verbal behavior increased as a function of density. Neutral verbal behavior increased in high and middle attraction groups, while it slightly decreased in low attraction groups as a function of density. It appears that crowding intensified social interaction in a negative manner, supporting the contention that crowding can have detrimental effects on human behavior. (31 ref)—*Journal abstract*.

9724. Forsyth, Donelson & Clark, Russell D. (U Florida) **The effects of frustration and social desirability on heterosexual attraction.** *Representative Research in Social Psychology*, 1975, Vol 6(2), 114-118.—Replicated a study by E. Walster et al (see PA, Vol 50:4846) which found that a selectively hard-to-get female was preferred over both an easy-to-get or a hard-to-get female. This finding was reproduced in a study with 45 unfrustrated male undergraduates. Frustration was manipulated by requiring half of the Ss to return to the laboratory at another time. However, when male Ss were mildly frustrated, they preferred females who had indicated attraction to them. Results are discussed in terms of external rewards and motivational states.—*Journal abstract*.

(Bell Canada, Montreal, Canada) **Negotiator status and accountability source: A study of negotiator behavior.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 342-359.—The nature of a negotiator's mandate (based on competence, affect, or unspecified) and of the group that was to review his performance (his own team or strangers) were manipulated to assess their impact on bargaining behavior. Results in 108 paid Ss (mean age, 19.9 yrs) show that both factors had unique and joint effects on negotiator behavior. Spokesmen elected due to competence appeared to perceive more latitude in their roles, felt more free to deviate from their team's position, but took longer to reach agreement. Freedom from the constituent positions was even more pronounced when they were evaluated by strangers. In contrast, spokesmen elected because of amiability seemed to adopt a compromising bargaining strategy, were very loyal to their groups, and did not deviate. But they also took more time to reach agreement when reviewed by their own team. Both negotiated solution quality and reported satisfaction were higher when spokesmen were reviewed by their own teams regardless of their election base. Data support a model of the negotiation process that stresses the importance of the relationship between a spokesman and his constituency to the outcome of bargaining. (44 ref)—*Journal abstract*.

9747. Schlenker, Barry R. (U Florida) **Group members' attributions of responsibility for prior group performance.** *Representative Research in Social Psychology*, 1975, Vol 6(2), 96-108.—Examined patterns of egocentric attributions in a cooperative group setting. 120 female undergraduates worked in 4-person groups on a group decision task. High or low incentive for task success was manipulated by varying the amount of money Ss could win. Bogus feedback was given to establish varying perceptions of overall group performance. Ss perceived greater causative responsibility for their group's performance following a group success rather than a group failure. Members of groups which experienced extreme success attributed greater responsibility for the group's success to themselves than to the average group member. Members of groups who experienced extreme failure tended to attribute less responsibility for the group's failure to themselves than they attributed to the average group member, but this was not statistically significant. Ss felt that the other members of their group perceived the task to be more important under high rather than low incentive conditions. Correlational support was obtained for the hypothesis that taking personal responsibility for a group success is directly related to the personal importance of doing well on the task. (33 ref)—*Journal abstract*.

9748. Schwartz, Shalom. (U Wisconsin, Madison) **The justice of need and the activation of humanitarian norms.** *Journal of Social Issues*, 1975, Vol 31(3), 111-136.—Examines the distinctiveness of the justice of need and of humanitarian norms. It is suggested that people do sacrifice their own resources for the benefit of others without hope of external reward, motivated by internalized personal norms. A theoretical process leading from awareness of need through norm activation to overt behavior based on the justice of need is outlined; situational and personality determinants of the activation of personal humanitarian norms and of efforts to neutralize these norms and deflect the moral costs of violating them are explored, and the relationship between humanitarian and exchange norms is discussed. 9765. Carver, Charles S. (U Texas, Austin) Physical aggression as a function of objective self-awareness and attitudes toward punishment. *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 510-519.

—Based on theory of self-awareness, it was hypothesized that Ss would use their attitude to determine their behaviors when (a) that attitude was salient and (b) their attention was directed toward themselves. A total of 64 undergraduates who on questionnaires had indicated that they opposed or condoned the use of punishment, were given the opportunity to shock a male confederate in 2 (bogus) learning experiments. Each S was instructed to use his or her own attitude in choosing shocks to punish incorrect persons. Self-awareness was increased among half the Ss by the presence of a mirror. In each of 2 experiments, a Punitive-Mirror \times Self-Awareness interaction resulted: High Punitive-Mirror Ss shocked higher than low Punitive-Mirror Ss, but their respective No-Mirror controls did not differ from each other.—*Journal abstract*.

9766. Chance, June; Goldstein, Alvin G. & McBride, Loren. (U Missouri, Columbia) Differential experience and recognition memory for faces. *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 243-253.—Conducted 2 recognition memory experiments using photographs of Black, White, and Japanese faces as stimuli. In Exp I 144 White college students showed most accurate recognition memory for White faces, next most accurate recognition for Black faces, and least accurate memory for Japanese faces. In Exp II 48 White and 48 Black students were tested with all 3 groups of faces. Again, it was found that Whites did better on White faces than on Black faces and did least well on Japanese faces. Blacks, in contrast, did best on Black faces, next best on White faces, and also did least well on Japanese faces. The significant Race of S \times Race of Pictured Face interaction points to differential prior experience with various kinds of faces as the basis for these differences in memory performance. More generally, these findings support the applicability of the concept of schema to the processes by which faces are discriminated, processed, stored, and remembered. (19 ref)—*Journal abstract*.

9778. Filter, Terrance A. & Gross, Alan E. (U Michigan) Effects of public and private deviancy on compliance with a request. *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 553-559.—A confederate requester asked 84 male undergraduates to write letters for an educational campaign after they had completed a battery of tests and received either deviant or nondeviant feedback. Half the Ss were led to believe that the requester had knowledge of their test performance; the remaining half believed that the confederate did not know their test scores. Within these conditions, some Ss believed that complying with the request would involve future meetings with the requester while others were not led to anticipate any future interaction. As expected, deviants complied more than nondeviants; neither the secret-known nor the future interaction variations produced effects. Contrary to the prediction that deviants are compliant because they wish to avoid mistreatment, secret deviants complied slightly more than known deviants. Compliance is discussed as instrumental in improving self-image.—*Journal abstract*.

9779. Franklin, Billy J. (Southwest Texas State U) Need, receipt or denial of aid, and attitudes toward the benefactor. *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 261-266.—Attempted to determine if the results of an international simulation reported by S. J. Morse and K. J. Gergen (see PA, Vol 47:4609) could be replicated in an actual aid situation where the applicant for aid was himself characterized by a definable level of financial need. A theoretical model was developed that yielded 4 research hypotheses concerning the combined impact of need and receipt or denial of aid upon Ss' attitudes toward a benefactor. Tests of these hypotheses were based on a questionnaire survey of 191 students enrolled in a small university in the southeastern US. Data were consistent with 3 of the 4 research hypotheses.—*Journal abstract*.

9782. Halperin, Keith; Snyder, C. R.; Shenkel, Randee J. & Houston, B. Kent. (U Kansas) Effects of source status and message favorability on acceptance of personality feedback. *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 85-88.—Studied the effects of diagnostician status and favorability of personality feedback on S's acceptance of the feedback. 60 undergraduates were given Rorschach inkblots and received either a positively or negatively worded general personality interpretation. These descriptions were ostensibly communicated by either a low-, moderate-, or high-status

diagnostician. Ss rated the positively worded interpretation as more descriptive of their own personalities than the negatively worded interpretation. Furthermore, the low-status diagnostician elicited lower acceptance than either the middle or high-status diagnostician. A Status \times Favorability interaction revealed that the negative interpretation was less accepted than the positive interpretation under the low-status condition as compared to the moderate- or high-status conditions (15 ref.) *Journal abstract*.

9783. Hardy, Stephen L. (Southern Illinois U) **The relationship of hostility guilt, need for approval, and assault to the expression of aggression under arbitrary and nonarbitrary frustration.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4627.

9784. Hornstein, Harvey A.; LaKind, Elizabeth; Frankel, Gladys & Manne, Stella. (Teachers Coll. Columbia U) **Effects of knowledge about remote social events on prosocial behavior, social conception, and mood.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1038-1046. Conducted 4 experiments with a total of 167 undergraduates to study how knowledge of remote social events affects interpersonal behavior and perception. In each experiment Ss were exposed to a news broadcast containing either prosocial or antisocial content preselected to reflect either the "best" or "worst" aspects of human nature. In Exp I, Ss played 1 round of a nonzero-sum game, and as predicted, those exposed to a "good" newscast chose cooperatively and expected others to choose cooperatively and to have cooperative goals for the game more often than those exposed to a "bad" news broadcast. Exps II, III, and IV concerned possible mediators of this behavior. Ss who heard a good newscast, in comparison with others who heard a bad one, were more inclined to believe that a relatively high percentage of people subscribed to beliefs and values concerning the well-being of others. The effects of these same newscasts on mood, as measured by the abbreviated form of the Nowlis Mood Adjective Check List, were not significant. (17 ref.) *Journal abstract*.

9785. Johnson, Charles D. & Gormly, Anne V. (Michigan State U) **Personality, attraction, and social ambiguity.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 227-232.—Examined social desirability and anxiety as mediators of similarity-attraction effects. 40 female undergraduates completed the Marlowe-Crowne Social Desirability Scale, the State-Trait Anxiety Inventory, and the Interpersonal Judgment Scale and then were placed in an ambiguous face-to-face situation in which an accomplice agreed with the S on 7 of 14 attitude issues. It was hypothesized that in making interpersonal judgments (a) high anxiety Ss would attend to disagreeing information, and (b) high social desirability Ss would tend to agreeing information. Results support both hypotheses. *Journal abstract*.

9786. Jorgenson, Dale O. (California State U, Long Beach) **Field study of the relationship between status discrepancy and proxemic behavior.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 173-179. Observations of the proxemic behavior (angle of orientation and distance between interacting pairs) of 88 interacting pairs of equivalent status (ES) and 33 pairs of discrepant

status (DS) male Caucasian supervisors and nonsupervisory personnel of a utility firm were made while these Ss attended a series of 6 biweekly training meetings. It was expected that ES pairs would have a more direct orientation and would stand at a closer distance than DS pairs. All observations were made by a single male observer who was in attendance at each meeting. The distance and angle of orientation of all pairs of Ss who interacted within 30 min prior to and 15 min after each meeting were coded with the use of scales developed by E. I. Hall (1959). As expected, ES pairs assumed a significantly more direct angle of orientation than DS pairs ($p < .01$) but failed to stand at a closer distance. Results suggest that angle of orientation may be more sensitive than distance to status differences. *Journal abstract*.

9787. Kaplan, Robert M. (San Diego State U, CA) **The cathartic value of self-expression: Testing, catharsis, dissonance, and interference explanations.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 195-208. Examined the effects of anger arousal, type of expression, and communication destiny on anger and aggressive drive. 110 undergraduates were exposed to an insulting or a noninsulting communication. Ss replied to the communication by supporting it, opposing it, or taking a neutral position. Some were told that their replies would be read by the person who had written the communication (target), and others that their responses would not be shown to the target. Results show that anger arousal produced more hostility than the nonarousal and that angry Ss who had expressed their feelings became more hostile than Ss who had expressed the opposite of their feelings. Angry Ss who had taken a neutral position, however, were lowest in hostility. Experimental effects attributable to other variables were nonsignificant. Results are interpreted in terms of a cognitive interference hypothesis. (30 ref.) *Journal abstract*.

9789. Konečni, Vladimir J. & Ebhesen, Ebbe B. (U California, San Diego) **Effects of the presence of children on adults' helping behavior and compliance: Two field studies.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 181-193.—Investigated complementary aspects of the notion that the presence of children affects adults' helping behavior. In Study 1, 33 lone women (19 accompanied, 14 unaccompanied by a child), 28 pairs of women (14 with, 14 without a child), and 30 mixed-sex couples (15 with, 15 without a child) encountered an "injured" confederate in parks and parking lots of shopping centers. The main results suggest that it may be the task of fathers to model altruism for children in this situation. In Study 2 an adult woman, accompanied or unaccompanied by a child, or a lone child, asked a total of 84 women in their suburban homes to sign a petition which was either "appropriate" or "inappropriate" for children. While an interaction between the age-of-requester and appropriateness-of-petition factors was predicted, only the overall difference

between petitions was significant ($p < .01$). (19 ref) —*Journal abstract.*

9791. Lawrence, Janet H. (U California, San Diego) **The effect of perceived age on initial impressions and normative role expectations.** *International Journal of Aging & Human Development*, 1975(Fal), Vol 5(4), 369-391.—Operating on the assumption that people are able to form initial impressions of others on the basis of limited information (e.g., age, dress, etc) and that these initial impressions are the result of stereotyping, 2 thematic apperception type instruments, Age Appearance Photographs (AAP) and Role Reversal Photographs (RRP), were developed. Their purpose was to determine to what extent age cues were considered when forming impressions compared to other sources of information (dress, body stance, etc) and the cognitive dissonance experienced by Ss when the age of a person in a particular role does not coincide with expectation for that role. Interviews and testing with the AAP and RRP were conducted with 30 young adults, 30 middle-aged, and 30 elderly Ss. Results indicate that (a) differences among experimental age groups were not significant; (b) age cues were not used as often as others in forming initial impressions; (c) age cues were used in conjunction with other cues more often than dress, facial expression, body build, and body stance; and (d) CA appears to be a dimension effecting the allocation of certain social roles. 9794. Lombardo, John P.; Steigleder, Michele & Feinberg, Richard. (State U New York, Cortland Coll) **Internality-externality: The perception of negatively valued personality characteristics and interpersonal attraction.** *Representative Research in Social Psychology*, 1975, Vol 6(2), 89-95.—Several recent studies suggest that similarity may not lead to attraction if a similar other and the S possess traits that are negatively valued by the Ss. These studies also suggest, contrary to the D. Byrne et al (1967) similarity-attraction hypothesis, that Ss should be attracted to a dissimilar stranger who possesses positively valued characteristics. These divergent predictions were tested in the present experiment within the dimension of internality-externality, based on evidence indicating that externals have an internal ideal-self. 80 undergraduates classified as either internal or external by scores on Rotter's Internal-External Control Scale evaluated 2 strangers (1 internal and 1 external) on several rating scales. In spite of the fact that the external Ss described the external stranger in negative terms, they

preferred the similar external stranger. Internals also preferred the similar internal stranger. Results indicate that when given a choice, similarity is preferred to dissimilarity.—*Journal abstract.*

9799. Redfield, Joel & Paul, Gordon L. (State U New York, Stony Brook) **Bias in behavioral observation as a function of observer familiarity with subjects and typicality of behavior.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 156.—Examined the extent of bias in recordings made by highly trained observers on a reliable low-inference instrument when familiar targets displayed behaviors they had never performed in the past. Results suggest that low-inference recordings of specific behavioral classes provide a better approach to reliable and valid clinical assessment.

9800. Richey, Marjorie H.; Koenigs, Robert J.; Richey, Harold W. & Fortin, Richard. (St Louis U) **Negative salience in impressions of character: Effects of unequal proportions of positive and negative information.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 233-241.—344 undergraduates were presented with varying amounts of favorable and unfavorable information describing behaviors of an unknown person. Ss rated his character after each type of information and rated it again a week later. Where the amount of positive information was greater than the negative, results indicate that a single negative behavior neutralized 5 positive behaviors, yielding an impression only insignificantly better than that based on 5 negative and 5 positive actions. Final ratings were compared with values predicted by a simple averaging theory. Empirical ratings were significantly lower than theoretical values except for 2 cases where an averaging theory would also predict negative impressions. (17 ref)—*Journal abstract.*

9801. Ross, Michael & diTocco, Don. (U Waterloo, Canada) **An attributional analysis of moral judgments.** *Journal of Social Issues*, 1975, Vol 31(3), 91-109.—Analyzes the psychology of moral judgment from the framework of attribution theory. The relevance of perceptions of responsibility for moral evaluation is examined along with 4 specific factors which influence the sophistication of responsibility attributions: specification, motivational biases, linguistic usage, and attributional context. The role played by policing mechanisms

in the maintenance of moral behavior is also discussed. (2 p ref)—*Journal abstract.*

9803. Satow, Kay L. (Boston U, School of Management) **Social approval and helping.** *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 501-509. —Examined the role played by social approval as an incentive for helping behavior. After filling out the Marlowe-Crowne Social Desirability Scale, 95 female undergraduates were asked to make donations to a research fund under either public or private conditions. The following predictions, derived from social learning theory, were supported: (a) More money is donated under public conditions than under private conditions; (b) more money is donated by individuals high in need for approval than those low in need for approval; and (c) the effect of need for approval on donating is greater under public conditions than under private conditions. (38 ref)—*Journal abstract.*

9804. Schlenker, Barry R. (U Florida) **Self-presentation: Managing the impression of consistency when reality interferes with self-enhancement.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1030-1037.—120 undergraduates believed that they would participate in a group task where their individual performance would either be known to the group or be completely anonymous. On the basis of bogus feedback from prior tests, Ss expected to perform either extremely well or very poorly on the group task; control groups received no such feedback. Before the task began, group members exchanged personal information that allowed them to vary their self-presentations. Factor analysis revealed 2 self-presentational factors: competence and interpersonal relations. A Performance Expectations \times Anonymity interaction was obtained on self-presentational claims to personal competence. Under public performance conditions (where future public events could invalidate an unrealistically positive self-presentation), self-presentations were consistent with Ss' expectations of actual performance. However, under anonymous conditions, self-presentations were quite favorable and unaffected by expectations of actual performance. Results support an incentive model and fail to support a consistency model. (23 ref)—*Journal abstract.*

9809. Snyder, C. R. & Shenkel, Randee J. (U Kansas) **Effects of "favorability," modality, and relevance on acceptance of general personality interpretations prior to and after receiving diagnostic feedback.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 34-41.—Findings from a study with 80 undergraduates raise serious questions regarding the interpretation of earlier research that has generally indicated that "favorable" personality descriptions are accepted more highly than "unfavorable" personality descriptions. Although Ss more readily accepted a general personality interpretation when it was positively rather than negatively toned, the higher acceptance evidently resulted from the greater base-rate truthfulness existing in the favorable interpretation. Ss who received a favorable interpretation considered it to be significantly less true of people in general than for themselves. The unfavorable personality interpretation was not viewed by Ss as being more or less true for people in general than for themselves. Ss' faith in psychological tests increased significantly after receiving diagnostic feedback. Those Ss who received a favorable personality interpretation rated the diagnostician as more skilled after receiving the personality description. Whether the interpretation was delivered in oral or written form had no effect on acceptance. (24 ref)—*Journal abstract.*

9814. Tzeng, Oliver C. (U Illinois, Ctr for Comparative Psycholinguistics) **Differentiation of affective and denotative meaning systems and their influence in personality ratings.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 978-988.—Empirically examined the dichotomy of affective and denotative meaning systems and their influence on individual

differences in personality ratings. The 3-mode factor analytic technique with a newly developed transformation methodology for the scale mode was applied to data collected by R. Hogeraad (see in relation PA, Vol 49:9172) from 50 male French-speaking Belgians, rating 40 personality concepts against 40 semantic differential scales. Results show that 3 affective dimensions (evaluation, potency, and activity) were dominant in the indigenous factor structure of personality impressions and that 3 dimensions in the "other" space, orthogonal to affect, were clearly interpretable denotative semantic features of personalities. 3 idealized individual differences on interactions of these 2 meaning systems with 4 concept factors were highlighted by the final rotated inner core matrix. The present methodology along with the semantic differential technique and 3-mode factor analysis can be applied to various types of Ss and/or concept domains for better understanding of intra- and intercultural differences.—*Journal abstract.*

9828. Blomeyer, R. [Identity, identification, individuation.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 260-276.—Notes that when narcissistic positions are reactivated and worked through certain contents appear and changes occur which are similar to contents and changes seen in the individuation process. The theory of individuation seems to correspond to positively formulated basic narcissistic positions. M. Fordham's theory of the primary self clearly corresponds to Freud's concept of primary narcissism and to E. Jacobson's concept of a psychophysiological original self. Individuation would seem to be a sort of "formed" (shaped) narcissism and psychosis to be unsuccessful individuation. There is a path which leads from an original unity (an "identity" between mother and child, self and ego), by way of identifications and the formation of a psychosocial "identity," to individuation.—*S. D. Babcock.*

9829. **Bobele, R. Monte; Alston, Herbert L.;** Wakefield, James A. & Schnitzen, Joseph P. (U Houston) **Relationships among Holland's personality types measured by an adjective checklist.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 201-206.—Performed a test of the personality constructs hypothesized by J. L. Holland using a list of adjectives believed to be descriptive of the respective types. Ss were 174 undergraduates who were directed to indicate whether or not each of 78 adjectives was self-descriptive. Scores for Holland's 6 types were obtained based on the number of adjectives endorsed for each type. Distances between types in factor space were analyzed for correspondence with Holland's model. Ss used the adjectives to describe themselves in a manner consistent with Holland's model; however, the correspondence was closer for males than females.—*Journal abstract*.
9830. **Bostrom, John A.** (Christian Health Care Ctr, Outpatient Psychiatric Services, Wyckoff, NJ) **The superego and the good life.** *Journal of Religion & Health*, 1975(Oct), Vol 14(4), 284-293.—Defines conscience and considers overly strict and lax consciences. Freud's "superego" is compared with concepts used in other historical periods and by other schools of thought. It is suggested that therapists usually see patients with unreasonable consciences which reflect the patient's upbringing and tell a great deal about his parents. Guilt and depression are seen as concomitants of tyrannical superegos. (30 ref)—*F. Hardt*.

9838. **Carlota, Annadaisy J.** (U Illinois) **The effects of experimentally induced success-failure, initial level of self-regard and task difficulty on changes in self-evaluation.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4074.
9839. **Chang, Theresa S.** (Kansas State U) **The self-concept of children in ethnic groups: Black American and Korean American.** *Elementary School Journal*, 1975(Oct), Vol 76(1), 52-58.—Compared the self-concepts of 144 Black-American and 151 Korean-American intermediate grade children. Ss responded to the Piers-Harris Children's Self Concept Scale, an 80-item scale consisting of several clusters of yes-no statements on (a) behavior, (b) intellectual and school status, (c) physical appearance, (d) anxiety, (e) popularity, and (f) happiness and satisfaction. Black-Americans had significantly higher mean scores on (c) and (e). Korean-Americans had significantly higher scores on (a), (b), and (f). Both groups indicated significantly lower self-concepts with grade progress in (b), (c), and (d). For both groups, significant differences were found between the sexes with respect to (d) with the females indicating less anxiety than males. The mean scores of both groups were higher than the mean of the norm with Korean-Americans exceeding Black-Americans. The former Ss' higher level of school achievement was reflected in their higher scores on the testing instrument. (21 ref)—*A. J. Ter Keurst*.
9840. **Clark, Ruth A.** (U Illinois) **The I-E Scale: Control of what?** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 154-66 undergraduates listed all the events that they thought would happen to them or that they would engage in (a) over the next weekend, (b) over the next summer, (c) 5 yrs from now, or (d) 20 yrs from now and whether each event would be personally or externally controlled. Data indicate that internals and externals differ not only in the degree of control they perceive their actions exerting over the corresponding reinforcement but also in the degree of control over the behavior itself.

(U Missouri, Kansas City) **Causal attribution in simulated versus real situations: When are people logical, when are they not?** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1021-1029.—Conducted 2 studies of the circumstances in which people base their causal attributions over outcomes on logical inferences drawn from the temporal and interpersonal consistency of those outcomes as opposed to less rational criteria (e.g., ego-oriented considerations). In Study 1 with 30 male and female undergraduates which used an other-attribution, simulation design, strong support for the applicability of a logical consistency model of attribution was found. However, in Study 2 with 96 male undergraduates which assessed self-attribution in a real-task situation, little support for the model was found, and there were several indications that Ss based their attributions largely on ego-oriented considerations. It is proposed (a) that strong support for the consistency model in the past might be partly a function of the minimal-information, within-Ss, simulation designs used, which set up strong constraints on Ss to be logical, and (b) that in real-task situations, consideration of outcome consistency is just one of several determinants of attribution. (16 ref) *Journal abstract*

9878. Martinelli, Raffaella. (U degli Studi, Facoltà di Lettere e Filosofia, Pavia, Italy) [Body image and self-image in a group of 160 adolescent students: Aims, methods, and results of a research experiment: II.] (Ital) *Archivio di Psicologia, Neurologia e Psichiatria*, 1975(Jan-Feb), Vol 36(1), 65-89.—Administered 3 questionnaires to 80 14-15 yr olds and 80 18-yr-olds equally divided for sex. Results confirmed various hypotheses concerning body perception as the physical aspect of a larger process in the building of personal identity. Sex and social status differences were particularly predominant. Body awareness was keener in the younger Ss than in the older group. Girls with higher socioeconomic status (SES) showed a more modern and dynamic woman's model than did lower SES girls. Implications of these results are methodological as well as clinical.—L. L'Abate.
9879. Mellstrom, Martin; Cicala, George A. & Zuckerman, Marvin. (U Delaware) **General versus specific trait anxiety measures in the prediction of fear of snakes, heights, and darkness.** *Journal of Consulting*

& *Clinical Psychology*, 1976(Feb), Vol 44(1), 83-91.—Investigated the relation between general and specific trait anxiety tests and fear measures in 3 actual situations. Both types of test (e.g., State-Trait Anxiety Inventory A-Trait scale, Taylor Manifest Anxiety Scale, Neuroticism scale of the Eysenck Personality Inventory, Geer Fear Survey Schedule, and 3 specific fear questionnaires) were administered to 76 undergraduate females early in the semester. Later, each S was exposed to each situation, where observer's ratings, behavioral, and subjective fear measures were obtained. Results indicate that the specific tests were clearly superior to the general ones in predicting fear of snakes but only slightly superior in predicting fear of heights and darkness. It is concluded that the overall superiority of the specific measures supports the current trend toward situation specificity in personality assessment. The roles played by threat to self-esteem, the form of the general trait anxiety measurement, and sensation seeking are also discussed. (25 ref)—*Journal abstract*.

9880. Mischel, Walter; Ebbesen, Ebbe B. & Zeiss, Antonette M. (Stanford U) **Determinants of selective memory about the self.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 92-103.—Investigated the influence of success and failure experiences and expectancies (on an ability task) on selective memory for positive vs negative personality information about oneself. Success-failure experiences and expectancies were manipulated independently in all combinations. Ss were 90 undergraduates. Thereafter, each S was exposed to an equal extent to positive and negative information about his personality and then tested for memory of that information. As predicted, Ss correctly remembered their personality liabilities relatively less than their assets when they expected to succeed than when they expected to fail on an ability test or when they had no relevant expectancy (control). Also, as predicted from cognitive social learning theory, the effects of expectancy overshadowed those of experience. Correlations with data from Byrne's Repression-Sensitization Scale and Rotter's Internal-External Control Scale are discussed. (31 ref)—*Journal abstract*.

9881. Murray, Sandra R. & Mednick, Martha T. **Perceiving the causes of success and failure in achievement: Sex, race, and motivational comparisons.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 881-885. 49 Black male and 58 Black female undergraduates completed the A. Mehrabian measure of achievement motivation, a digit-guessing task, and an instrument assessing subjective outcome and perceived cause of outcome. Males high and low in resultant achievement motivation related luck to outcome. High-achievement females related luck, ability, and effort to outcome, whereas low-achievement-motivated females attributed outcome to task difficulty. (18 ref)—*Journal abstract*.

9883. Orenstein, Herbert; Orenstein, Elizabeth & Carr, John E. (U Washington, Medical School, Seattle) **Assertiveness and anxiety: A correlational study.**

Journal of Behavior Therapy & Experimental Psychiatry, 1975(Oct), Vol 6(3), 203-207.—Based on J. Wolpe's contention that assertive responses are incompatible with anxiety and are effective in overcoming neurotic fear, the present study predicted an inverse relationship between assertiveness and anxiety. 250 male and 200 female undergraduates completed the Rathus Assertiveness Schedule (RAS). Males proved significantly ($P < 0.001$) more assertive than females. Based on the distribution of RAS scores, 3 discrete, noncontiguous groups (high, average, and low assertive), comprising 86 undergraduates, were selected for further testing, which included the Maudsley Personality Inventory, the State-Trait Anxiety Inventory, and the Fear Survey Schedule II. Analyses of variance confirmed that assertiveness relates inversely and highly significantly ($P < 0.0005$) with measures of neuroticism, trait anxiety, and interpersonal anxiety for both males and females.—*Journal abstract*.

9884. Parker, Frederick B. (U Delaware) **Sex-role adjustment and drinking disposition of women college students.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1570-1573.—Administered the Attitude-Interest Analysis Test (a measure of sex-role adjustment) and the Alcadd Test (a screening measure for alcoholism) to 218 female undergraduates. Feminine role preferences decreased significantly with increasing alcoholism scores, and femininity preferences of these young heavy drinkers were similar to those of adult women alcoholics in a previous study.

9885. Paszkiewicz, Elzbieta. (U Warszawski, Inst Psychologii, Poland) **[Ego and behavior.]** (Polh) *Psychologia Wychowawcza*, 1974(Mar-Apr), Vol 18(2), 192-209.—Reviews articles dealing with the effect of the ego on behavior from the standpoint of self-concept, ego involvement, and locus of control. The focus of interest is the relationship between 2 forms of ego involvement and altruistic behaviors. It is concluded that there is a distinguishable class of altruistic behaviors that emerge by a mechanism connected with the ego. (44 ref)—*H. Kaczkowski*.

9892. Scott, William A. & Peterson, Christopher. (James Cook U, Townsville, Australia) **Adjustment, Pollyannaism, and attraction to close relationships.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 872-880.—Examined the common finding that personal adjustment tends to be associated with favorable attitudes toward self and others from 3 perspectives: (a) personal adjustment is associated with liking for close, personal relationships; (b) personal adjustment is associated with a general Pollyannaism concerning all aspects of the person's world; (c) apparent adjustment and attraction to socially approved objects are manifestations of a test-taking style of favorable self-presentation. Questionnaire data obtained from a total of 574 college students in 3 cultures (US, Japan, and New Zealand) tended to support the 1st interpretation best and the 3rd least. There was evidence for a general Pollyannaism among well-adjusted Ss, but their preferences were especially pronounced for close, personal relationships. (39 ref)—*Journal abstract*.

9893. Seifert, Theodor. [Archetype and the inner model of the world.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 294-317.—"Archetype" and "image" are compared with "information" and "control" in the sense of being self-regulating biological systems. The collective unconscious is the corresponding inner base for the exchange of information with the outer world, both parts related together as communicative systems. The input of stimuli is transferred by different steps. The archetypes constitute the psychic world of images that make up the human world. They can be described by numbers or, like the reflexes, as algorithms. Archetypes as the origin of images are considered to be a necessary complement to reflexological modes of behavior, which are of great importance, as the learning matrix shows. With this definition of archetypes a nonspeculative psychology with a psyche can be built up.—*S. D. Babcock*.

9894. Smékal, Vladimír. (Purkyně U, Filosofická fakulta, Brno, Czechoslovakia) [Relationship between temperament and character traits in adolescents.] (Czec) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(1), 13-30.—Temperament, the formal dynamic basis of personality, was measured by a questionnaire based on Berger's characterological questionnaire; character, a set of principles, attitudes, and value orientations, on which the moral value of the personality depends, was measured by a modification of Stein's method of self-evaluation. The interaction of character traits was measured by a rating scale. Correlational analysis confirmed the hypothesis that there are specific relationships between extreme temperamental types and attitudes as well as interactions with character traits. Socialization and education can change natural relationships of temperament and character to create more desirable traits; and in this inner activity will power plays a substantial role.—*H. Bruml*.

9895. Stenson, Herbert; Kleinmuntz, Benjamin & Scott, Barbara. (U Illinois, Chicago Circle) **Personality assessment as a signal detection task.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 794-799.—Conducted a series of studies with 2 experi-

enced clinicians, 12 undergraduate psychology students who had taken a course in testing, and 8 clinical psychology graduate students to test 3 assumptions that would contribute to making the signal detection model applicable to interpreting MMPI profiles. It was hypothesized that a judge's discriminative process is a sample from a normal distribution of all possible discriminative processes for the MMPI stimulus set; that the standard deviations of 2 distributions of binary MMPI decisions are equal; and that the discriminative capacities of judges remain fixed from one decision session to the next, regardless of instructions. All assumptions were satisfactorily supported.—*Journal abstract*.

9902. Trope, Yaacov. (Hebrew U, Jerusalem, Israel) **Seeking information about one's ability as a determinant of choice among tasks.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 1004-1013.—Investigated the effects on choice among achievement tasks of achievement motive and 2 task characteristics: difficulty and informational value about one's own ability. 102 male undergraduates, whose achievement motive was assessed by the Mehrabian Achievement Scale, were given a choice among tasks varying in difficulty and informational value. As expected, tasks of high informational value were preferred to tasks of low informational value, and this preference was more pronounced for Ss high in achievement motive than for Ss low in achievement motive. Further, neither the high-motive group nor the low-motive group preferred tasks of intermediate difficulty over easy and hard ones. It is concluded that the informational value rather than the

affective value of performance outcomes determines choice among tasks: the stronger the achievement motive, the stronger the tendency to seek information about one's own capabilities. (23 ref)—*Journal abstract*.

9905. Wheeler, W. M. **Aggression.** *Reiss-Davis Clinic Bulletin*, 1975(Fal), Vol 12(2), 77-89.—Reformulates the place of aggression within psychoanalytic theory. Aggressive instincts have traditionally been viewed under Thanatos. However, theoretical and clinical evidence is presented that these instincts fit more logically under Eros. Six origins for aggressive behavior are outlined and discussed from both psychoanalytic and nonpsychoanalytic positions, the latter representing the fields of ethology, psychology, and biology. It is concluded that aggressive instincts should be considered in combination with sexual instincts. They do not arise from a single source, but are determined by 4 interrelated sources: narcissism, pregenital stages of the libido, frustration of libidinal wishes, and defensive reaction of the ego. (15 ref)—G. R. Alley.

PHYSICAL AND PSYCHOLOGICAL DISORDERS

9911. Freedman, Jonathan L.; Heshka, Stanley & Levy, Alan. (Columbia U) **Population density and pathology: Is there a relationship?** *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 539-552.

Studied the relationship between population density and pathology in New York City, using data from the 1965 *New York City Directory of Needs*, a compilation of

demographic and health statistics for each of 338 health areas (i.e., homogeneous neighborhoods of about 15,000-20,000 residents). Although there were substantial simple correlations between density and various pathologies, controlling for income and ethnicity caused all relationships to disappear except for a slight correlation between density and psychiatric terminations. It is concluded that density, measured as people per acre and persons per room, has little or no independent effect on pathology. (20 ref)—*Journal abstract*.

9912. Gocka, Edward F. (VA Hosp, Sepulveda, CA) **MMPI item responses for male neuropsychiatric patients.** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 12.

9913. Hanzlíček, L. (Výzkumný ústav psychiatrický, Prague, Czechoslovakia) [Some new trends in biochemical research in psychiatry.] (Czec) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 393-400.—Surveys several attempts made during the last 20 yrs to relate schizophrenia and other functional mental disorders to the action of specific biochemical substances. Hypotheses surrounding 2 of these substances, 6-hydroxydopamine and gluten, are examined. The fallacy of researchers who are not clinical psychiatrists is that they attempt to determine correlations between exact chemical data and a clinical abstraction of inexact nosological categories. It is concluded that although it is possible that mental disorders will one day be defined chemically, it is naive to attempt to reduce their multifactorial etiology to a few biochemical denominators.—V. Fischmann.

9914. Kasl, Stanislav V. & Harburg, Ernest. (Yale U) **Mental health and the urban environment: Some doubts and second thoughts.** *Journal of Health & Social Behavior*, 1975(Sep), Vol 16(3), 268-282.—Conducted interviews assessing perceptions and evaluations of the residential environment and selected indicators of mental health and well-being with 1,000 residents of 4 census tracts of Detroit (mean ages of the 4 tracts: 40.8, 39.7, 40.8, and 43.5). Two tracts were "high stress" (low on socioeconomic indices and high on rates of crime and marital and residential instability) and 2 were "low stress" areas; 1 tract in each group was predominantly Black or largely White. Results show clear and strong differences in the perceptions of the residential environment by respondents in the contrasting areas. However, differences in mental health and well-being could not be clearly established for the residents in the contrasting areas, nor did the perception of the neighborhood show consistent associations with mental health. Blood pressure levels were also unrelated to the environmental perceptions. (2 p ref)—*Journal abstract*.

9915. Klingner, A. et al. (Douglas Hosp, Montreal, Canada) **A psychogeriatric assessment program: III. Clinical and experimental psychologic aspects.** *Journal of the American Geriatrics Society*, 1976(Jan), Vol 24(1), 17-24. Variables stemming from standard psychologic tests (including the Bender Gestalt Test and the Comprehension subtest of the WAIS), psychophysiology tests, and operant conditioning procedures were employed in assessing the status of 80 psychogeriatric patients with either organic brain syndromes or functional psychoses. 55 normal controls in 3 age groups, and 36 psychogeriatric controls, were also tested. Differences

were observed in the responses between the 2 experimental groups. In general, the performance of the patients with organic brain syndromes was more deviant than that of the patients with functional psychoses, and the performance of the hospitalized geriatric patients (regardless of diagnosis) was worse than that of the normal control groups.—*Journal abstract.*

9916. Lenkowsky, Ronald S. (Columbia U) **The effects of categorical labels on judgments of the academic competency and social acceptability of handicapped children by teachers and parents of regular grade pupils.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6486-6487.

9918. Malhotra, H. K. & Wig, N. N. (New Jersey Coll of Medicine & Dentistry, East Orange) **Dhat syndrome: A culture-bound sex neurosis of the Orient.** *Archives of Sexual Behavior*, 1975(Sep), Vol 4(5), 519-528.—Describes the Indian Dhat syndrome, a culture-bound symptom complex whose clinical picture includes severe anxiety and hypochondriasis. The patient is preoccupied with the excessive loss of semen by nocturnal emissions. There is a fear that semen is being lost, and mixed in urine. To investigate the cultural basis of the Dhat syndrome, 107 30-50 yr old males from the general public were interviewed. A vignette describing an individual having nocturnal emissions was read aloud to the respondents. A large segment of the general public from all socioeconomic classes believed that semen loss is harmful. Seminal fluid was considered an elixir of life both in the physical and in the mystical sense, and its preservation was thought to guarantee health, longevity, and supernatural powers. This belief was more frequent in lower socioeconomic classes. It is expected that with increasing literacy and progress in sex knowledge the syndrome will become less common. (33 ref)—*Journal abstract.*

9919. McMurray, Gordon A. (U Saskatchewan, Saskatoon, Canada) **Theories of pain and congenital universal insensitivity to pain.** *Canadian Journal of Psychology*, 1975(Dec), Vol 29(4), 302-315.—Reviews the literature on congenital insensitivity to pain with attention on the clinical entity called congenital universal insensitivity to pain (CUIP). Specificity, pattern, and gate control theories of pain are considered with reference to their ability to subsume research findings on CUIP. These data seem best explained by gate control theory which has the additional advantage of providing a processing model for pain closer to the models being developed in other perceptual systems. Guidelines for research on CUIP based on implications derived from gate control theory are suggested. (French summary) (3/4 p ref)—*Journal abstract.*

9920. Merbaum, Michael & Hefez, Albert. (U Haifa, Israel) **Some personality characteristics of soldiers exposed to extreme war stress.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 1-6.—Administered the MMPI to 24 Israeli and 433 American soldiers hospitalized for psychiatric reasons and to 12 Israeli and 48 American soldiers hospitalized for medical

reasons. All Ss were under 26 yrs of age. The mean profiles of Israeli and American medical and psychiatric groups showed no scale overlap. 21 of 24 Ss in the Israeli psychiatric sample had 4 or more scales above a *T* score, whereas only 1 of the 12 medical Ss had 2 clinical scales above a *T* score of 70.—*Journal abstract.*

9921. Pasquali, Elaine A. **Personification: Patient and nurse problem.** *Perspectives in Psychiatric Care*, 1975(Apr-Jun), Vol 13(2), 58-61.—Discusses the tendency of man to endow inanimate objects with human attributes, attitudes, and feelings. This tendency is generally called anthropomorphism, and in patient cases where the body image is involved, it is called personification. Two related concepts are discussed: (a) self-system or the reflected appraisals of significant others and (b) somatic estrangement or the feeling that the entire body, or any part of it, is unreal, unfamiliar, or unrelated to the person. Two clinical examples are included to illustrate these concepts. The implications for nurses and how intervention techniques are used when patients are involved in personification are discussed.—*M. L. Hogan.*

9922. Seidel, U. P.; Chadwick, O. F. & Rutter, Michael. **Psychological disorders in crippled children: A comparative study of children with and without brain damage.** *Developmental Medicine & Child Neurology*, 1975(Oct), Vol 17(5), 563-573.—Conducted a standardized study of all crippled children aged between 5 and 15 yrs and of normal intelligence on the local-authority lists of handicapped children in 3 London boroughs. Psychiatric disorder was twice as common in children whose crippling was due to cerebral disease or damage rather than some peripheral lesion. Since the groups were well-matched in terms of physical incapacity and social background, it is concluded that brain damage was responsible for the children's increased vulnerability to emotional problems. Brain damage was also associated with a marked increase in reading difficulties and a lowering of intelligence within the normal range. Psychiatric disorder was found to be related not only to cerebral injury but also to various types of family disturbance. It is concluded that emotional and behavioral disturbances stemmed from both an increased biological vulnerability and psychosocial hazards.—*Journal abstract.*

9932. Asarnow, Robert. (Wayne State U) **Information processing in schizophrenics with and without a family history of schizophrenia and in normal subjects.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3484.

9933. Baldwin, Beverly A.; Floyd, H. Hugh & McSeveney, Dennis R. (U Kentucky) **Status inconsistency and psychiatric diagnosis: A structural approach to labeling theory.** *Journal of Health & Social Behavior*, 1975(Sep), Vol 16(3), 257-267. Tested the hypothesis that information such as the patient's status inconsistency (which is related to role conflict), achieved status, and ascribed status are used in establishing the psychiatric disposition of the patient and that patients with high

status inconsistency would receive the more severe diagnoses (i.e., psychotic) while those with low status inconsistency would receive the less severe diagnoses (i.e., nonpsychotic). Data were obtained from 11,325 diagnosed psychiatric patients discharged through mental health centers and treatment clinics during 1968-1971. Three variables were included in a status inconsistency index: marital status, occupation, and welfare status. The status inconsistency of the patients yielded the least explanatory power regarding diagnosis. In contrast, employment, occupation, age, and sex all provided a moderate amount of explanation. The single most powerful predictor variable was the race of the patient. It is concluded that both primary and secondary socialization of the agents for diagnosis (psychiatrists) affected this socially constructed outcome. (26 ref) —*Journal abstract.*

9935. Bates, Erica M. (U New South Wales, School of Health Administration, Sydney, Australia) **Models of mental disorder: An Australian survey.** *Social Science & Medicine*, 1975(Oct), Vol 9(10), 549-551.—Describes 2 basic models of mental disorder, medical and sociological, and proposes that a medical-socio-educational model is generally most effective. A survey was conducted with 1,000 residents of Sydney and 5 subgroups (psychiatric professionals, clergymen, university students, nurses, and business managers) to assess attitudes toward mental disorders in that city. Generally, the mentally disordered were not rejected, but were pushed aside to the medical care system. However, it was found that the community was able to accept mentally disordered people even if they were not defined as ill. It has been suggested that there is some danger in allowing the status and power of medicine to assume control over such a large number of deviant people. If this is so, then newer models of mental disorder need to be disseminated more widely and social and educational services need to be available so that disturbed people can consult a variety of professionals, apart from doctors.—*Journal abstract.*

9936. Beck, Aaron T.; Kovacs, Maria & Weissman, Arlene. (U Pennsylvania, Medical School) **Hopelessness and suicidal behavior: An overview.** *JAMA. Journal of the American Medical Association*, 1975(Dec), Vol 234(11), 1146-1149. Studied the relation of hopelessness to levels of depression and suicidal intent in 384 17-63 yr old suicide attempters using the Beck Depression Inventory and the Beck Helplessness Scale. Results support previous reports that hopelessness is the key variable linking depression to suicidal behavior. This finding has direct implications for the therapy of suicidal individuals. By focusing on reducing the sources of a patient's hopelessness, the professional may be able to alleviate suicidal crises more effectively than in the past. (30 ref) —*Journal abstract.*

9937. Beels, C. Christian. (Bronx Psychiatric Ctr, NY) **Family and social management of schizophrenia.** *Schizophrenia Bulletin*, 1975(Sum), No 13, 97-118. Pres-

ents a theory of the family as a major cause of schizophrenia and uses this as a basis for discussing the inclusion of the nuclear family in the treatment of schizophrenia. The development of such a treatment program is described. Types of schizophrenia—1st breaks and periodic and chronic patients—are discussed, and case histories illustrating each type are presented. (26 ref)—*M. E. Pounsel.*

9939. **Bourgeois, M.** (Ctr Carreire, Bordeaux, France) [The psychiatrist and birth control.] (Fren) *Encéphale*, 1975, NS Vol 1(3), 259-263.—Discusses the fact that special methods of acquiring children, such as the biological device of artificial insemination and the legal device of adoption, create emotional disturbances and problems of identification which psychiatrists must know how to treat. (17 ref)—*K. J. Hartman.*

9940. **Černá, H. & Černý, M.** (Karlova U, Psychiatrická klinika, Prague, Czechoslovakia) [Changes in contents of schizophrenic delusions and hallucinations.] (Czec) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 362-368.—Compared 287 schizophrenics and paraphrenics treated during 1946-1947 with 146 such patients treated during 1969-1970 to determine whether the incidence and content of schizophrenic and paraphrenic delusions and hallucinations have changed. Results show that the total percentage of incidence had not changed very much. Delusions with political content had decreased in both males and females. Religious and magic delusions had also decreased in males, but increased in females. Delusions with erotic content increased more in females than in males, who relatively more often had delusions with technological themes. Findings suggest that the thematic content of delusions and hallucinations is influenced by the changing life experiences of patients. (Russian & English summaries) (17 ref)—*V. Fischmann.*

9941. **Calnen, Terrence.** **Gender identity crises in young schizophrenic women.** *Perspectives in Psychiatric Care*, 1975(Apr-Jun), Vol 13(2), 83-89.—Discusses female transsexualism, a phenomenon experienced by females who, despite their identification with males, function quite well emotionally and cognitively. Four case histories are included. Terms used in describing the female transsexual syndrome are defined, and the family dynamics that help produce female transsexualism are discussed.—*M. L. Hogan.*

9942. **Carter, John D.** (New School for Social Research) **An analysis of two methods of predicting breakdown in children with a high risk for schizophrenia.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3489-3490.

9943. **Casper, Edward S.** (New York U) **Eysenck's hypothesized relationship between hysterics-dysthymics and introversion-extraversion: A multidimensional study.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4035.

9944. **Caulfield, Joseph B. & Martin, Randall B.** (Range Mental Health Ctr, Virginia, MN) **Establishment of praise as a reinforcer in chronic schizophrenics.** *Journal of Consulting & Clinical Psychology*, 1976(Feb),

Vol 44(1), 61-67.—Studied the effectiveness of a method of altering the reinforcing properties of the verbal event *good* in 54 male 20-55 yr old chronic, process, nonparanoid schizophrenics. In agreement with previous research, *good* was ineffective in a verbal conditioning and in a reaction time task for these Ss. However, when *good* was repeatedly paired with the termination of censure in the reaction time task, it became an effective reinforcer on a subsequent verbal conditioning task. (16 ref) —*Journal abstract.*

9945. **Clausen, John A. & Huffine, Carol L.** (U California, Berkeley) **Sociocultural and social-psychological factors affecting social responses to mental disorder.** *Journal of Health & Social Behavior*, 1975(Dec), Vol 16(4), 405-420.—Discusses historical and anthropological evidence about society's recognition and response to mental disorder and more recent investigations of responses in contemporary America. It is argued that recognition of mental illness is influenced not so much by particular signs and symptoms as by the accumulation of many inexplicable actions and statements. The consequences of social response as expressed by labeling theory, the role of mental patients and the uses of treatment, and the relationship of mental disorder to social policy are also examined. It is noted that a major determinant of response is the degree to which ongoing systems of interaction are threatened or disrupted by problematic behaviors. Questions are raised about the phenomena usually associated with the term "mental disorder" and the implications that this may have for social reactions and treatment. (72 ref)—*L. Gorsey.*

9946. **Clum, George A.** (Virginia Polytechnical Inst & State U) **Role of stress in the prognosis of mental illness.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 54-60.—Based on a definition of stress as the presence of recent life changes, stress was examined in relation to total symptomatology as rated by the patient and a significant other and to 5 symptom factors. Ss were 196 17-66 yr old consecutively admitted psychiatric inpatients who completed Rahe's Life Change Inventory and the Katz Adjustment Scale (KAS) at hospitalization and 1 yr later. Significant others also completed the KAS. Stress measured at the time of hospitalization was not prognostic of level of symptomatology 1 yr later. Stress was related to symptomatology as rated by the patient at both time periods but was not related to symptomatology as rated by the significant others. Results are discussed in terms of reactive-endogenous conceptualizations of mental illness.—*Journal abstract.*

9947. **Cohen, Ronald J. & Smith, Frederick J.** (New York U, Bellevue Medical Ctr) **Socially reinforced obsessing: Etiology of a disorder in a Christian Scientist.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 142-144.—Reports the case of a 28-yr-old mother and housewife referred for treatment for a variety of complaints, the keystone of which was her obsession with disease. As an adolescent she was introduced to Christian Science. During the next decade she had a number of experiences that either reinforced or challenged her beliefs in the efficacy of prayer and the validity of "thought cures." As crises mounted in her life she began thinking about disease to an obsessive degree.

In spite of the fact that she recognized these thoughts to be unrealistic and much of her associated behavior to be irrational, she was incapable of resisting either the thinking or the overt behavior. Individual psychotherapy, employing a variety of modes, was quite effective in dealing with her difficulties.—*Journal abstract.*

9948. Cooper, Beatrice; Ekstein, Rudolf & Meltzer, David. (Reiss-Davis Child Study Ctr, Los Angeles, CA) **A child's literary production: Precursor of the adolescent struggle or psychotic breakdown?** *Reiss-Davis Clinic Bulletin*, 1975(Fal), Vol 12(2), 107-122.—Presents, in the order in which they were written, several literary compositions by a disturbed adolescent before he became severely disturbed. A mental health treatment team interpreted the compositions, and concluded that they could have been used to predict the patient's psychotic breakdown.—G. R. Alley.

9949. Crittenden, Randy L. (Texas Tech U) **An exploration into the theoretical aspects of obsessive-compulsive behavior as defined by Eysenck and Kell and Burow.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4657.

9950. di Marco, E.; Giuffra, F. & Pessi, P. A. (Ospedale Psichiatrico Provinciale, Genova, Italy) **[Some thoughts on the relationship between old age and mental illness.]** (Ital) *Neuropsychiatria*, 1974(Jan-Jun), Vol 30(1-2), 79-83.—Mental disturbances in old age, other than senile dementias, are seen as derived from generational role conflicts; these in turn result from maladaptive reactions of a declining organism to an environment which challenges and rejects traditional values and lifestyles. Current practices of "dumping" aging patients in psychiatric hospitals are described. A plea is made for the development of preventive community approaches and for specialized structures and personnel to better serve the needs of geriatric patients in institutions. (English, French & German summaries) (15 ref)—A. Felice.

9951. Dobry, J. (Karlova U, Psychiatrická klinika, Prague, Czechoslovakia) **[To the theory of emotions.]** (Czec) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 389-392.—Speculates that some psychopathological phenomena typical of emotional disorders, such as manic-depressive psychosis, are due to structural qualities of elements and networks transferring information in the CNS. It is suggested that some lacking links or explanations may be found by applying the laws of neurocybernetics; however, it is recognized that, at this stage, the proposed hypothesis is tentative and its verification would require new methodologies. (Russian summary)—English summary.

9952. DuBois, Chester C. (U Georgia) **A study of variables affecting psychiatric attendants' rejection of the mentally ill.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5328.

9953. el Sendiony, M. F. (Goulburn Coll of Advanced Education, Australia) **The status of Egyptian women and psychoneurotic symptoms.** *International Mental Health Research Newsletter*, 1975(Fal), Vol 17(3), 14-16.—Relates the low status of Egyptian women to the type of conflicts experienced by female Egyptian psychoneurotic patients, the defense mechanisms they choose, and the ways in which they react to anxiety. Psychiatric and anthropological case material illustrates women's reac-

tions to their status; legally and religiously a woman is only half a man. Especially among married women in lower social orders, symptoms are related to (a) the sexual double standard; (b) marriages arranged without bridal consent; (c) the cultural mandate to bear children, especially males; and (d) the view of woman as "asexual drudges." Low status appears to be an important etiologic factor; studies of other cultures offer similar evidence.—C. A. Heikkinen.

9954. Flekkoy, K. (Gaustad Hosp, Oslo, Norway) **Changes of associative performance in hospitalized schizophrenics: A 16-year follow-up.** *Acta Psychiatrica Scandinavica*, 1975(Nov), Vol 52(5), 330-335.—After a mean test-retest interval of 16.6 yrs a sample of 72 initially acute/subacute as well as chronic schizophrenic patients showed a significant normalization of performance with respect to associative commonality, idiosyncratic responses, and response latency. Mean age of Ss at 2nd testing was 57.9 yrs. Only 39% of Ss received psychotropic drugs at the time of the 1st testing, whereas 93% receive such medication now. Findings are attributed chiefly to effects of psychotropic drugs and improved psychiatric treatment. A certain measure of improvement occurred independent of medication.—*Journal abstract.*

9955. Fromkin, Victoria A. (U California, Los Angeles) **A linguist looks at A Linguist Looks at "Schizophrenic Language."** *Brain & Language*, 1975(Oct), Vol 2(4), 498-503.—Refutes E. Chaika's (1974) proposal that schizophrenic speech can be characterized by 6 definable features. It is shown that, except for the disruption of the sequencing of ideas in discourse which can be attributed to nonlinguistic factors, all features are prevalent in normal speech as exemplified by speech errors and "slips of the tongue."

9956. Glatzel, J. (U Neuro-Psychiatrische Mainz, Klinik, W Germany) **[Social psychiatric aspects of clinolhythmic depression.]** (Germ) *Nervenarzt*, 1975(Mar), Vol 46(3), 143-151.

9957. Gold, Mark S. & Robertson, Mary F. (U Florida, Medical School) **The night/day imagery paradox of selected psychotic children.** *Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 132-141.—Presents a study of the dreams of 3 psychotic children. When the Ss were awakened on a systematic schedule, they evidenced reduced nocturnal imagery and a significant number of stagnant dreams. Their dream content was found to be different from that of normal children of the same age and sex.—*Journal summary.*

9958. Gruzeller, John H. & Venables, Peter H. (U London, Medical School, England) **Relations between two-flash discrimination and electrodermal activity, re-examined in schizophrenics and normals.** *Journal of Psychiatric Research*, 1975(Aug), Vol 12(2), 73-85.—Examined the tonic skin conductance (SC) responses of 24 schizophrenics and 12 normals while they performed a 2-flash discrimination task before, during, and after the presentation of continuous white noise. Schizophrenics were subdivided into 12 responders and 12 nonresponders on the basis of whether or not SC orienting responses occurred to repeated tones. The electrodermal levels and tonic response amplitudes of responders were higher than those of the controls. Nonresponders had the

lowest levels and their tonic responses were minimal. Correlations between the electrodermal variables and 2-flash threshold, perceptual sensitivity, and response criterion or B, revealed variations in threshold and perceptual sensitivity with repeated testing in the control group but not in the schizophrenic Ss. Correlations with B did not change. Results are related to previous divergent reports of the differential relations between 2-flash threshold and electrodermal activity in schizophrenics and controls, and a neurophysiological explanation for these effects is proposed. (39 ref)—*Journal summary*.

9959. Guensberger, E. & Fleischer, J. (Lekárska fakulta, Bratislava, Czechoslovakia) [Depression and disorders of perception.] (Slovak) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 369-374.—Examines 4 cases of endogenous depression with auditory pseudohallucinations. The diagnostic concept of "pseudohallucinations" is defined and the characteristics which differentiate them from true hallucinations are restated in accordance with the classic and generally accepted criteria. Restriction of sensorium and sensorial activities, similar to an afferent insufficiency caused by sensory deprivation, is suggested as the explanation of perceptual disorders in severe depressive states. (Russian summary)—*English summary*.

9960. Gunderson, John G.; Carpenter, William T. & Strauss, John S. (Harvard U, Medical School, Boston) **Borderline and schizophrenic patients: A comparative study.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1257-1264.—Conducted an evaluation and follow-up of matched samples of 24 borderline and 29 schizophrenic 15-45 yr old patients to determine the ways that borderline disorders are similar to or different from schizophrenia. Borderline Ss presented more confusing diagnostic pictures, but they could be differentiated from schizophrenic Ss by the absence of a definite or prolonged psychotic episode, by the relative severity of their dissociative experiences, by more severe anger, and by less anxiety. Despite the discrepant symptom pictures of the 2 groups, a systematic review of prehospitalization functioning and 2-yr posthospitalization course did not reveal significant differences between them. (16 ref)—*Journal abstract*.

9961. Harlan, Carl L. (U Utah) **Incidence and relationship of voice disorders within divergent psychotic populations.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3552-3553.

9962. Hedlund, James L.; Cho, Dong W. & Powell, Barbara J. (U Missouri, Medical School) **Use of MMPI short forms with psychiatric patients.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 924.—Compared the use of 2 MMPI short forms, the MMPI-168 and the Mini-Mult, with the complete MMPI using 2,721 psychiatric inpatients and 634 outpatients. Estimated Full Scale MMPI scores for both short forms showed very high relationships with actual Full Scale scores, and the degree of profile agreement for the 3 highest scales was also quite high, although comparisons of the MMPI-168 and Mini-Mult demonstrated a number of significant differences which affect profile interpretation.

9963. Homan, Eugene C. (Ohio U) **A Bayesian method for psychodiagnosis: The discrimination of psychosis and neurosis from MMPI scores.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4665.

9964. Jennings, William B. (Memphis State U) **A study of the preference for affective cues in autistic children.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4045-4046.

9965. King, Peter D. (U Southern California, Medical School) **Early infantile autism: Relation to schizophrenia.** *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 666-682.—In a review of case records, 12 cases of early infantile autism were found to have experienced significantly greater double bind relationships with their mothers than matched controls. A theory is offered which incorporates demographic and dynamic factors and proposes a link to childhood schizophrenia. (45 ref)—*R. M. Cohen*.

9966. Ko, Yung-Ho. (National Taiwan U, Taipei) **Student mental health problems in two differently industrialized cities.** *Acta Psychologica Taiwanica*, 1975, Vol 17, 25-38.—Examined the hypothesis that industrialization has negative effects on mental health. It was predicted that the mental health of the dwellers in a large city is poorer than that of the dwellers in a small city. Ss were a total of 425 female and 493 male high school students who represented small and large cities. The large and small city dwellers were compared on the new form Ko Mental Health Questionnaire scores. It was found that (a) the prediction was supported by the findings for the female Ss but not by those for male Ss; (b) the large city female dwellers were more likely to feel depressed and hostile; (c) the large city dwellers were less strict about time, money, sex, and aggression, and less concerned with the attitude of others toward them. Further studies using Ss of different ages and schools are recommended.—*Journal abstract*.

9968. Lagos, John M. (Fordham U) **Understanding of and execution of stereotyped social roles in schizophrenic patients.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4048.

9969. Lambert, Michael J. (Brigham Young U) **Spontaneous remission in adult neurotic disorders: A revision and summary.** *Psychological Bulletin*, 1976(Jan), Vol 83(1), 107-119.—Reviews the empirical evidence supporting a two thirds spontaneous remission rate in adult neurotic disorders along with the evidence used to support a much lower rate. A distinction between minimal treatment outcomes and true spontaneous remission rates is made and different rates of remission averaged. Some 28 experimental studies are quoted and interpreted as they relate to the "natural course" of the neuroses. An estimate far below that generally accepted is suggested; however, the spontaneous remission rates reported range from 0-90%. It is concluded, therefore, that any use of the empirical evidence collected to date as a substitute for a no-treatment control group appears unwarranted. Several suggestions for improved research methodology are made, with an emphasis on tracing and reporting the patients' prior history of complaints. A plea

is made for investigation of the long-term natural course of nonpsychotic disturbance, which is separate from polemics about the effectiveness of psychotherapy. (50 ref)—*Journal abstract*.

9970. **Lebovici, S.** (Ctr Alfred-Binet, Paris, France) [**Child hysteria.**] (Fren) *Psychiatrie de l'Enfant*, 1974, Vol 17(1), 5-52.—Studied child hysteria in the light of clinical observations and of recent discussions of the nature of hysteria. The relationship of child hysteria to simulation and mythomania is discussed, and an attempt is made to explain why conversion hysteria is rare in children. Child hysteria seems to be relatively specific and could form the basis for later adult neuroses. However, its specificity is in dispute, although it must be separated from functional disorders and from psychosomatic illness in children. The developmental implications of child hysteria are considered.—*D. F. Herran*.

9971. **Ledwell, Jo S.** (Ohio U) **The process-reactive dimension in schizophrenia: Reality or reification?** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6215.

9972. **Leichner, Reinhard.** (U Giessen, W Germany) [**Processing psychiatric information: I.**] (Germ) *Diagnostica*, 1975, Vol 21(4), 147-166.—Five psychiatrists assessed 5 neurotic, 5 schizophrenic, and 5 manic-depressive patients. The assessments were made in 5 stages and rating scales were filled out by the psychiatrists after Stages 1, 3, and 5. A 3-mode factor analysis yielding scale, patient, and psychiatrist factors was performed for each set of ratings. Four rating scale factors which remained reasonably constant over the 5 stages are reported. The patients could be optimally differentiated after Stage 1, and only 1 psychiatrist factor was important. It is suggested that beyond a certain point, further diagnostic information has little effect on the final diagnosis made.—*M. Morf*.

9973. **Leiter, Eli.** (New York U) **A study of the effects of subliminal activation of merging fantasies in differentiated and nondifferentiated schizophrenics.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4022-4023.

9974. **Locascio, Joseph J. & Snyder, C. R.** (U Kansas) **Selective attention to threatening stimuli and field independence as factors in the etiology of paranoid behavior.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 637-643.—Tested a theory that selective attention to threatening stimuli induces paranoia. An attempt was made to manipulate attention to threatening and nonthreatening statements among 60 college students and examine the effects on 3 indices of paranoia. Although manipulation checks indicated that attention was varied in the desired manner, hypothesized results in which selective attention to threatening statements would lead to greater scores on the paranoia measures were not found. However, a measure of field independence showed a predicted positive correlation with the indices of paranoia for Ss who were manipulated to attend selectively to threatening statements. These same correlations tended to be negative or zero among Ss manipulated to attend to nonthreat and among unbiased attenders. These data suggest that susceptibility to development of paranoid behavior through selective

attention to threat cues may increase as a function of field independence. (17 ref)—*Journal abstract*.

9975. **London, Perry.** **Psychotherapy for religious neuroses? Comments on Cohen and Smith.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 145-146.—Argues that many mental health professionals, including R. J. Cohen and F. J. Smith (see PA, Vol 55:Issue 5) who reported the case of a female Christian Scientist who became obsessed with thoughts of disease, are skeptical about the value of religious faith and that serious "indulgence" in it is not psychologically healthy. Whether the case reported by Cohen and Smith actually demonstrates this thesis and the ethical implications of intervening in a religious (vs a psychological) problem are considered.

9976. **Massie, Henry N.** (Mt Zion Hosp & Medical Ctr, San Francisco, CA) **The early natural history of childhood psychosis.** *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 683-707.—Presents 2 cases of childhood psychosis in which early home movies were used as a source of data for symptomatic behavior. Theoretical speculations are offered regarding nonverbal behavior and childhood psychosis. (21 ref)—*R. M. Cohen*.

9977. **Neary, John.** **Whom the gods destroy.** New York, NY: Atheneum, 1975. x, 403 p. \$12.50.—Presents a reconstructed account of a newspaperman's bout with mental illness, his efforts toward rehabilitation, and his attempts to understand the causes of the illness.

9978. **Parker, Gordon.** (U New South Wales, School of Psychiatry, Kensington, Australia) **Psychiatric diagnosis in New South Wales compared to England and Wales.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 556-558.—Examined the diagnoses of indigenous patients born between 1921 and 1955 and first admitted to hospitals in New South Wales, Australia, and England and Wales. Admission rates for mania were in striking agreement. The rate in New South Wales for schizophrenia was slightly higher and for psychotic depression considerably less than in England and Wales. A similar trend in diagnostic dissonance would appear to exist between England and Wales and New South Wales as between England and Wales and the US for schizophrenia and psychotic depression, but this was considerably less in degree.—*Journal abstract*.

9979. **Popov, Carol R.** (U Colorado) **The demographic history and emotional problems of student helpseekers.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6221-6222.

9980. **Ragins, Naomi et al.** (Pittsburgh Child Guidance Ctr, PA) **Infants and children at risk for schizophrenia: Environmental and developmental observations.** *Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 150-177.—Presents findings from several pilot studies which assessed and compared the developmental status and life experiences of offspring of schizophrenic mothers (14 infants and 17 elementary school children) with those of control groups of infants and children of nonschizophrenic mothers. Developmental and health problems and deviant behaviors were noted more frequently among the infant and toddler-age offspring of schizophrenics, but developmental problems in infancy and problems in later childhood were not significantly

more frequently reported for the school-age offspring. Psychological testing scored for psychopathology was also nondiscriminatory for this group. Findings are related to nurturant care among other variables. (44 ref)—*Journal summary*.

9981. Raymond, Margaret E.; Slaby, Andrew E. & Lieb, Julian. (Connecticut Mental Health Ctr, New Haven, CT) **Familial responses to mental illness.** *Social Casework*, 1975(Oct), Vol 56(8), 492-498.—Discusses the reactions of families to mental illness. Case examples illustrate the sequence of reactions: beginning uneasiness, a need for reassurance, denial and minimizing, anger and blame, guilt, shame and grief, confusion, and finally, the acceptance of reality.—*M. W. Linn*.

9982. Rongo, C. & del Priore, M. (Ospedale Psichiatrico Provinciale, Genova, Italy) [**Genetic studies of schizophrenia.**] (Ital) *Neuropsychiatria*, 1974(Jan-Jun), Vol 30(1-2), 99-111.—Reviews genetic studies and concludes that while the studies demonstrate the importance of genetic factors, they do not negate the participation of environmental factors in the development of schizophrenia. Various hypotheses concerning the mechanism of hereditary transmission are presented. (German & French summaries). (2 p ref)—*English summary*.

9983. Rudlová, B. (Karlova U, Psychiatrická klinika, Prague, Czechoslovakia) [**Diagnostic problems in the clouding of consciousness.**] (Czech) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 375-378.—Discusses 3 cases of temporal clouding of consciousness which were erroneously diagnosed as delirious states. Differences in classification, disagreements about terminology, and difficulties in correctly determining the etiopathogeny are given as the main reasons for the inaccurate differential diagnosis. (Russian summary)—*English summary*.

9984. Šedivec, V. (Karlova U, Psychiatrická klinika lékařské fakulty, Plzeň, Czechoslovakia) [**Some peculiarities in the progress of maniomania.**] (Czech) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 356-361.—Studied the progress activity of 255 monopolar and 57 bipolar manic-depressive patients who had been under psychiatric observation at least 20 yrs and had at least 3 psychotic episode-phases. Progress activity was measured by the arithmetic average of cycles. Both the monopolar and bipolar forms showed a progressive shortening of cycles (i.e., a progressive acceleration of progress activity). In the bipolar form the average length of individual cycles was shorter than in the monopolar depressions. Differences between cycles in males and females were not statistically significant. Findings confirm those reported in older literature, particularly by Kraepelin (1913), Lange (1928), and Müller (1936). (Russian & English summaries)—*V. Fischmann*.

9985. Sappington, A. A. & Michaux, Mary H. (U Alabama, University Coll) **Prognostic patterns in self-report, relative report, and professional evaluation measures for hospitalized and day-care patients.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 904-910.—Investigated differences between patients who relapse and those who do not in both hospital and day-care settings. Ss were 142 adult psychiatric patients. Hospital and day-care groups were matched on

a variety of demographic, social, and clinical variables. Three groups of measures were used: one based on professional evaluation (e.g., Inpatient Multidimensional Psychiatric Scale), one based on self-report (e.g., Katz Adjustment Scales), and one based on relative report (e.g., MMPI). No differences were found between hospital and day-care centers in proportion of patients relapsed. Of the 3 groups of measures, those based on professional evaluation were least able to distinguish relapsed from nonrelapsed patients. On self-report and relative report measures, the scores of patients who relapsed following day-care treatment resembled those of patients who succeeded following hospital treatment and vice-versa. (31 ref)—*Journal abstract*.

9986. Scribner, Richard S. (U Southern Mississippi) **The effects of using a vocational instructional approach to teach vocational attainment to psychiatric patients.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 5022.

9987. Sherman, Mark; Trief, Paula & Sprafkin, Robert. (Syracuse U) **Impression management in the psychiatric interview: Quality, style, and individual differences.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 867-871.—Studied the ability of 24 male 20-63 yr old Veterans Administration Day Treatment Center psychiatric outpatients to vary intentionally their degree of apparent psychopathology during structured interviews (Mental Status Schedule). Patients who were defined as sick presenters prior to the interview phase of the experiment behaved in a significantly more pathological manner during an interview preceded by "fake sick" instructions than they did under "fake healthy" instructions. Patients who had been defined as healthy presenters manifested less of a behavior difference between the 2 interview conditions. There was evidence that patients primarily altered the content of their self-referent statements, not their style of interview behavior, and relied on cues provided by the interview questions when role playing mental illness and mental health.—*Journal abstract*.

9988. Skinner, Harvey A.; Reed, Philip L. & Jackson, Douglas N. (U Western Ontario, London, Canada) **Toward the objective diagnosis of psychopathology: Generalizability of modal personality profiles.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 111-117.—Evaluated the representativeness of 8 previously identified personality prototypes among 282 male and 129 female alcoholic inpatients (mean ages, 44.9 and 44.4 yrs, respectively), 69 male prison inmates, 79 male and female chronic psychiatric patients (mean age, 33.0 yrs), 102 male and female short-term psychiatric patients (mean age, 26.8 yrs), and 197 male and female normal undergraduates. Classification hit rates ranged from 25.0% for the college student group to 53.6% for male prison inmates, compared with 56.0% for the derivation sample of male alcoholics. These figures were substantially greater than chance, as evidenced by an average hit rate of 4.9% using randomly generated targets. Two profiles were notably pervasive across all samples. A 2nd analysis compared group average profiles using multiple discriminant analysis. Three interpreted dimensions included (a) repression vs a rebellious, antisocial syndrome; (b) general symptom severity, and (c) a dimen-

sion differentiating male from female groups. It is concluded that the present modal profiles and proposed extensions offer considerable potential for developing more effective bases for diagnosis and treatment of psychopathology. (20 ref)—*Journal abstract*.

9989. Sloane, R. Bruce & Burgoyne, Rodney W. (U Southern California, Medical School) **When are we ever going to learn? MH**, 1975(Sum), Vol 59(3), 29-31.—Suggests that depression is misunderstood, feared, and avoided by the public and by the helping professions. Improving physician competency in sorting and labeling would be reflected in the resultant referrals, thereby ameliorating the stress felt by afflicted individuals and society.—*B. E. Allen*.

9992. Taylor, Michael A. & Abrams, Richard. (State U New York, Medical School, Stony Brook) **A critique of the St. Louis psychiatric research criteria for schizophrenia**. *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1276-1280.—Reviewed the research data for 89 hospitalized patients who were given an admission diagnosis of schizophrenia and 22 who were given a diagnosis of mania. Ss who were taken from a sample of 247 consecutive admissions to an acute treatment inpatient psychiatric unit of a municipal hospital over a 7-mo period. It was found that 11 (12%) of the schizophrenic Ss satisfied the St Louis research criteria for schizophrenia, and 10 (11%) satisfied the authors' criteria. Diagnostic agreement between the sets of criteria was shared in only 5 of these Ss. On the basis of this finding and other studies of the St. Louis criteria, specific modifications are suggested that would broaden the utility of these criteria and minimize diagnostic disagreement.—*Journal abstract*.

9993. Thomas, Claudewell S. & Lindenthal, Jacob J. (Rutgers State U, Newark) **The depression of the oppressed**. *MH*, 1975(Sum), Vol 59(3), 12-14.—Suggests that depression among Blacks (and other minorities) is different in kind and more frequent than among Whites, due to social inequities.—*B. E. Allen*.

9994. Videbech, Th. (Inst of Psychiatric Demography, Risskov, Denmark) **The psychopathology of anancastic endogenous depression**. *Acta Psychiatrica Scandinavica*, 1975(Nov), Vol 52(5), 336-373.—In a follow-up study, 104 patients admitted during 1950-1959 for manic-depressive psychosis with anancastic symptoms were compared to 104 nonmanic patients with affective psychosis. Symptoms most often met among anancastic Ss were anxiety, agitation, diurnal variation of mood, and early awakening. Seasonal variation and depersonalization in symptomatology were also more frequent among anancastic Ss. Anancastic Ss showed a significant preponderance of anancastic premorbid personality features. A positive correlation was found between the number of anancastic features and agitation, anxiety, diurnal fluctuation, seasonal variation, hypochondriacal

attitude, and depersonalization. Objective retardation or flight of ideas showed a significant negative correlation. It is concluded that it is possible to interpret the symptomatology of anancastic depressions as a pathoplastic influence on the anancastic personality, but it cannot be excluded that some of the symptoms like anxiety and agitation are linked to the presence of anancastic symptoms as such. (2 p ref)—*Journal abstract*.

9995. Wahl, Otto F. (U Rochester) **Monozygotic twins discordant for schizophrenia: A review**. *Psychological Bulletin*, 1976(Jan), Vol 83(1), 91-106.—Describes 3 approaches using monozygotic twins discordant for schizophrenia. It is noted that comparisons of discordant with concordant pairs have yielded conflicting results concerning the possibility of both genetic and environmentally induced forms of schizophrenia. Life history comparisons of schizophrenics with their nonschizophrenic co-twins have revealed consistent early differences in personality and parental treatment; investigators disagree, however, on the relationship of birth weight to schizophrenic development. Relatively few studies have been done of concordance for personality or performance traits among monozygotic twins discordant for schizophrenic diagnosis. It is suggested that this 3rd type of research holds great promise for identifying fundamental manifestations of the schizophrenic genotype, that higher female concordance rates make female discordance worthy of greater attention, and that investigations of environmental influences on the development of schizophrenia neglect less the possible positive influences which may buffer against schizophrenic breakdown. (33 ref)—*Journal abstract*.

9996. Warheit, George J.; Holzer, Charles E. & Arey, Sandra A. (U Florida) **Race and mental illness: An epidemiologic update**. *Journal of Health & Social Behavior*, 1975(Sep), Vol 16(3), 243-256.—Presents findings on the relationship between race and mental health extracted from a 5-yr epidemiologic study in the southeastern US. Mental health scores in 5 separate psychiatric scales (general psychopathology, phobias, anxiety symptom, anxiety function, and depression) were compared for 1,645 Black and White respondents. Results show that Blacks had significantly higher mean scores than Whites on all the scales. When controlled for other sociodemographic factors, however, the variable Black was statistically significant in only 2 of the equations, and in 1 of these the significance level was quite minimal. Being Black was a highly significant variable when scores on a phobia scale were analyzed. In every instance, low socioeconomic status was the most powerful predictor of high scores. It is concluded that there is no definitive evidence that race alone is a primary etiologic factor in accounting for differences in the rates of mental illness between Blacks and Whites. (28 ref)—*Journal abstract*.

10004. Bigelow, George; Griffiths, Roland & Liebson, Ira. (Johns Hopkins U, Medical School) **Experimental models for the modification of human drug self-administration: Methodological developments in the study of ethanol self-administration by alcoholics.** *Federation Proceedings*, 1975(Aug), Vol 34(9), 1785-1792.—Reviews experimental studies of human ethanol self-administration, and describes the procedural evolution that has occurred in the experimental study of the determinants of human ethanol self-administration. Human experimental models of alcoholism have been established within residential laboratories which permit chronic availability of ethanol to volunteer alcoholic Ss. Experimentation within such environments has progressed from observational and descriptive studies of experimental intoxication to studies that manipulate experimental variables so as to modify (reduce) ethanol self-administration by alcoholic Ss. When a variety of restrictions on ethanol availability have been imposed, sensitive self-administration baselines have been established which have permitted the direct experimental assessment of some of the determinants of ethanol self-administration. Six methodological principles are suggested for enhancing the information yield of future research on the determinants of ethanol self-administration. (28 ref)—*Journal abstract*.

10006. Brown, Robert A. & Williams, Robert J. (U Auckland, New Zealand) **Internal and external cues relating to fluid intake in obese and alcoholic persons.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 660-665.—A study of fluid intake using a preferred nonalcoholic beverage was modeled on previous studies of food intake in the obese. Groups of hospitalized alcoholics, nonalcoholics, and nonalcoholic nonpatients

($N = 60$) were composed of half obese and half normal-weight Ss. The degree to which drinking behavior was affected by internal and external cues was related to diagnosis but not to obesity. Preloading (internal cue) inhibited drinking by nonalcoholics, but it did not affect the alcoholics' intake. Alcoholics drank significantly more of the blend of tea they ranked as most preferred (external cue) and less of a nonpreferred drink (water) than nonalcoholics. (22 ref)—*Journal abstract*.

10010. Gomberg, Edith S. (U Michigan, School of Social Work) **Prevalence of alcoholism among ward patients in a Veterans Administration Hospital.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1458-1467.—Interviews with 207 patients on general medical, surgical, and neuropsychiatric wards (mean age 40.6 yrs) revealed that about 55% had experienced drinking-related problems, with about 26% having current drinking problems. Patients with histories of problem drinking were significantly more likely to be admitted with digestive and respiratory diseases than those with no such history.

10011. Gottsagen, Mitchell L. (Temple U) **An analysis of the relationship between frustration, inhibition, and aggressive cue with overt aggressive behavior in delinquents.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4040.

10012. Gove, Walter R. (Ed). (Vanderbilt U) **The labelling of deviance: Evaluating a perspective.** New York, NY: John Wiley & Sons, 1975. 313 p.—Presents a collection of 9 articles which evaluate the labeling explanation of deviant behavior, focusing on alcoholism, physical disability, mental illness, mental retardation, adult crime, juvenile delinquency, drug use, and sexual deviance.

10013. Herman, C. Peter & Polivy, Janet. (Northwestern U) **Anxiety, restraint, and eating behavior.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 666-672.—Hypothesized that individual differences in eating behavior based on the distinction between obese and normal Ss could be demonstrated within a population of normal Ss classified as to the extent of restraint chronically exercised with respect to eating. Ss were 42 female college students. Restrained Ss resembled the obese behaviorally, and unrestrained Ss resembled normals. This demonstration was effected in the context of a test of the psychosomatic hypothesis of obesity. Results indicate that although some individuals may eat more when anxious, there is little empirical support for the notion that eating serves to reduce anxiety. An

explanation for this apparent inconsistency is offered.
—*Journal abstract.*

10014. Higgins, Raymond L. & Marlatt, G. Alan. (U Kansas) **Fear of interpersonal evaluation as a determinant of alcohol consumption in male social drinkers.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 644-651.—Investigated the effects of fear of interpersonal evaluation on drinking behavior. 64 male undergraduates classified as heavy social drinkers were assigned to 1 of 8 conditions in a $2 \times 2 \times 2$ factorial design. All Ss participated in a wine-tasting task designed as an unobtrusive measure of drinking behavior. Half of the Ss were led to believe that they would take part in a 2nd experiment in which they would be evaluated by a group of women, and half did not expect to be evaluated in the 2nd study. Ss were also classified as either internally or externally oriented based on their scores on the locus of control scale. For the 3rd factor, $\frac{1}{2}$ of the Ss were given an opportunity to exercise some situational control prior to the impending evaluation, and $\frac{1}{2}$ of them were deprived of this control. Results show that Ss expecting to be evaluated drank significantly more alcohol than low-fear controls, but the locus of control and situational control factors did not significantly affect drinking rates. (20 ref)—*Journal abstract.*

10015. Hraba, Joseph; Miller, Martin G. & Webb, Vincent J. (Iowa State U) **Mutability and delinquency: The relative effects of structural, associational, and attitudinal variables on juvenile delinquency.** *Criminal Justice & Behavior*, 1975(Dec), Vol 2(4), 408-420.—Compared the ability of mutable (e.g., role expectations and attitudes) and immutable (e.g., parental income and cultural background) correlates of delinquency to account for self-reported delinquency. As part of an evaluation of a legal socialization program, 1,181 9th graders were given the Portune Attitude-Toward-Police Scale, the Clark Attitude Toward Legal Institutions Scale, the Srole Anomie Scale, and the Clark Powerlessness Scale. Responses were categorized as either structural-cultural, associational, or attitudinal variables. Results of a stepwise regression analysis show that attitudinal variables accounted for 21% of the variance in self-reported delinquency, structural variables for 16%, and associational variables for 9%. Among the attitudinal variables, scores on the Portune scale were the best predictor, accounting for 17% of the total 21%. Sex contributed almost 12% to the total of 16% of the variance explained by cultural variables, and among the associational variables, church participation and police contact explained almost the total 9%. Additional regression equations confirmed these patterns. Results suggest that programs that change attitudes and associations would be as effective in reducing unofficial delinquency as structural-cultural changes. (25 ref)—*L. Gorsey.*

10016. Ikeda, Terutika. (Kyushu U, Faculty of Medicine, Fukuoka, Japan) **[Pathological alcohol intoxication and amnesia: From the psychiatric tests of an accused murderer.]** (*Japan Kyushu Neuro psychiatry*, 1975, Vol 21(2), 80-94.—Reports the results of psychiatric examinations of a 28-yr-old man prosecuted for a fatal stabbing. Clinical examinations indicated weakening in the heart muscles and high blood pressure, but no

abnormality in EEG patterns. The Suzuki-Binet Test indicated an IQ of about 70, and Rorschach results suggested that he was simple, temperamental, and self-centered, and lacked cooperation and persistency of thoughts and feelings. The alcoholism test showed that once he became intoxicated, he developed severe delusions and amnesia. This amnesia was thought to be the major cause for the great discrepancies between his testimony given in court and in the police station and between his testimony and that of other witnesses. (English summary)—*S. Ashida.*

10017. James, Jane E. (National Council on Alcoholism, Kansas City, MO) **Symptoms of alcoholism in women: A preliminary survey of A.A. members.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1564-1569.—Administered a drinking history and symptoms questionnaire to 600 27-73 yr old female members of Alcoholics Anonymous and compared the responses of 89 Ss to E. M. Jellinek's alcoholism and symptomology framework was established using data from male Ss. Important sex differences which were found are examined, and the need for more thorough attempts at identification of female alcoholics is discussed.

10018. Karpowitz, Dennis H. & Zeis, F. Richard. (U Kansas) **Personality and behavior differences of obese and nonobese adolescents.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 886-891.—36 adolescents categorized as nonobese, obese in a weight control program, and obese who rejected a weight control program were given opportunities to snack and were administered 3 personality tests (Tasks of Emotional Development by Cohen and Weil, the Mooney Problem Check List, and Rotter's Internal-External Control Scale). Results indicate that more obese not in a weight control program ate in an individual eating situation in which they suspected they were being observed. More nonobese ate in a group eating situation in which they did not suspect they were being observed. Results also indicate the highest level of maturity for nonobese adolescents and the lowest level for obese adolescents not in a weight program. Obese adolescents in a weight control program reported fewer "very troublesome" problems than obese adolescents not in a weight control program or nonobese adolescents. (17 ref)—*Journal abstract.*

10019. Katchadourian, Herant A. & Sutherland, Jeffrey V. (Stanford Medical Ctr, CA) **Psychiatric aspects of drug addiction in Lebanon.** *International Journal of the Addictions*, 1975, Vol 10(6), 949-962.—Of the 4,624 Lebanese citizens diagnosed as psychiatric February 15-August 15, 1964, 315 were drug addicts. Patterns of prevalence showed a rapid turnover and high recidivism among addicts who came to psychiatric attention. The distributions of these patients by age, sex, marital status, income, education, and religion, and by the subcategories of addiction, are presented. Referral and treatment processes are described. There was a striking concentration of addicts among males, in the lower income group, and among Moslems. (15 ref)—*Journal summary.*

10022. Kunce, Joseph T.; Ryan, Joseph J. & Eckelman, C. Cleary. (U Missouri, Columbia) **Violent behavior and differential WAIS characteristics.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 42-45.—Used Q-factor analytic techniques to analyze the WAIS profiles of 30 17-73 yr old white males recently admitted to a maximum security unit for the criminally insane at a midwestern state hospital. The 15 Ss incarcerated for commission of violent crimes tended to have similar subtest score configurations. Subsequent investigation indicated that these WAIS profiles could be described as a simple ratio of the Similarities score to the total of all 11 subtest scores. The mean Similarities ratio score for the violent group was significantly lower than that of the nonviolent group in both the original and cross-validation samples. Results indicate the potential value of research efforts that simultaneously evaluate measures of related deficits in abstract reasoning, left temporal lobe dysfunctioning, and violent behavior on the same Ss. (21 ref)—*Journal abstract*.

10024. Marlatt, G. Alan; Kosturn, Carole F. & Lang, Alan R. (U Washington, Seattle) **Provocation to anger and opportunity for retaliation as determinants of alcohol consumption in social drinkers.** *Journal of Abnormal Psychology*, 1975(Dec), Vol 84(6), 652-659.—Assigned 30 male and 30 female college students identified as heavy social drinkers to 1 of 6 groups in a 3 × 2 factorial design. In addition to the S sex factor, the 3 main treatment groups were provocation to anger with no opportunity to retaliate, provocation with opportunity for retaliation, and a no-provocation, no-retaliation control group. Provoked Ss were angered by an insulting confederate, whereas controls experienced a neutral interaction with the confederate. In the retaliation condition, Ss were given the opportunity to deliver a fixed number of shocks to the confederate who had provoked them. Drinking rates in all Ss were then determined by their participation in a standardized taste-rating task, which permitted an unobtrusive measure of alcohol consumption. Results show that group members who were provoked and expressed their anger by retaliating against the confederate consumed significantly less alcohol than provoked Ss in the no-retaliation condition. Controls drank an intermediate amount of alcohol but did not differ significantly from the other 2 groups. Sex was not a significant determinant of alcohol consumption. (16 ref)—*Journal abstract*.

10025. Matthey, Wayne. (U Georgia) **The effect of observational learning and perceived gain on the imitative behavior of sociopaths.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4669.

10026. Mitchell, Ross G. (U Dundee, Scotland) **The incidence and nature of child abuse.** *Developmental*

Medicine & Child Neurology, 1975(Oct), Vol 17(5), 641-644.—Discusses characteristics which are frequently found among child-battering mothers. They are usually young, have immature dependent personalities, lack self-esteem, and have high expectations of their children and may resort to violence if a child fails to meet their excessive demands. Methods of identifying the battered child are discussed.

10027. Morgan, H. Gethin; Burns-Co., Christopher J.; Pocock, Helen & Pottle, Susan. (U Bristol, England) **Deliberate self-harm: Clinical and socio-economic characteristics of 368 patients.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 564-574.—Interviewed 368 patients after they had attended a hospital emergency department following a nonfatal act of deliberate self-harm. There were twice as many females (247) as males (121), and 1/3 of the patients were in the 15-35 age group. 95% had taken a drug overdose, most commonly one or more of the tranquilizers, antidepressants, hypnotics, or analgesics. 78% had taken drugs prescribed by a doctor. Half the patients mentioned interpersonal conflict as a major precipitating factor in the episode. A psychiatric diagnosis was completed for all admitted patients, of whom 52% were considered to be suffering from neurotic depression, 29% from personality disorder, 12% from functional psychosis, and 10% from alcohol addiction. Almost half had deliberately harmed themselves on a previous occasion. The series showed a greater than average incidence of unemployment, overcrowded living conditions, divorce, and antisocial behavior. The implications of these findings for the clinical management and prevention of nonfatal deliberate self-harm are discussed. (19 ref)—*Journal abstract*.

10030. Nerviano, Vincent J. (Eastern State Hosp, Psychology Service, Lexington, KY) **Common personality patterns among alcoholic males: A multivariate study.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 104-110.—Determined whether the proper combination of measures and multivariate methods would identify homogeneous prototype subgroups of alcoholics with common diagnostic and prognostic characteristics and if these subgroups would reflect known clinical syndromes rather than specialized types. Data from 366 inpatient alcoholic veterans (mean age, 44 yrs) on the Personality Research Form (PRF) and the 16 PF were examined by factor and canonical correlational analysis. The PRF and 16 PF showed substantial and appropriate convergences. Based upon these initial structural analyses, the Lorr correlational clustering procedure was applied to patient profiles composed of selected PRF scales. Contrasts among the 7 obtained types, using the PRF and 16 PF scales as referents, led to a tentative characterization of each type in terms of

known psychopathological syndromes (i.e., compulsive, impulsive, aggressive-paranoid, submissive, avoidant-schizoid, asocial-schizoid and narcissistic-psychopathic types). These types are considered suitable for future studies of the Patient Type \times Therapy Type variety. (37 ref)—*Journal abstract*.

10031. Orford, Jim. (Inst of Alcohol, Addiction Research Unit, London, England) **Alcoholism and marriage: The argument against specialism.** *Journal of Studies on Alcohol*, 1975(Nov), Vol 36(11), 1537-1563.

A review of the literature on alcoholism and marriage reveals that most studies have focused on alcoholism to the exclusion of other factors involved in family disruption. Methodological weaknesses and simplistic theories and concepts in most of the research are noted. (97 ref)

10032. Pascarelli, Emil F. & Fischer, William. (Roosevelt Hosp. Community Health Services, New York, NY) **Drug dependence in the elderly.** *International Journal of Aging & Human Development*, 1975(Fal), Vol 5(4), 347-356.—Examined the life styles of elderly street addicts and methadone treatment patients. Results revealed a change in pattern of drug use motivated primarily by economic factors. The older addict tends to maintain a low profile and avoids harassment, arrest, and public attention. The number of older persons in methadone treatment is increasing rapidly. A considerable number of elderly persons misuse other drugs, particularly barbiturates, alcohol, and other depressants. These are usually obtained from legal sources. New approaches in treatment and public policy are needed to deal with these problems. (16 ref)—*Journal abstract*.

10033. Peterson, Linda M.; Urban, Hugh B. & Vondracek, Fred W. (Pennsylvania State U, Coll of Human Development) **Self-report measurement of "delinquent orientation" in institutionalized delinquent and high school boys.** *Criminal Justice & Behavior*, 1975(Dec), Vol 2(4), 383-396.—Describes the development of a 75-item self-report instrument designed to measure "delinquent orientation" as revealed by youths' attitudes, values, beliefs, and goals presumed to be of significance in governing their behavior. A questionnaire was administered to 299 institutionalized delinquents and 431 high school students in both urban and rural public secondary schools. Ss were matched on age, family's socioeconomic and educational level, and urban or nonurban residence. The expectation that delinquent youths would be more negatively oriented and hence inclined to produce consistently more critical judgments (in regard to their homes, families, school experiences, and the behavior of others) was not confirmed by factor analyses of responses. Only with respect to unfavorable judgments of the justice system and its personnel were initial expectations upheld. (37 ref) *Journal abstract*.

10034. Polk, Kenneth. (U Oregon) **Schools and the delinquency experience.** *Criminal Justice & Behavior*, 1975(Dec), Vol 2(4), 315-338. Examines the idea that school experience is an important factor in understanding delinquency by proposing an institutional theory which weaves together family-school-adult work role linkages. Secondary data and findings drawn from an ongoing cohort study of 284 adolescent males are used to show that (a) adult success is related to school success,

(b) school success is related to family status characteristics, (c) school status and social class exert independent effects on delinquency, and (d) adult careers, both successful and deviant, are functions of adolescent school and delinquency labels. (19 ref)—*Journal abstract*.

10035. Prokupek, J. (Inst Lékařů a Farmaceutů, Psychiatrická Katedra, Prague, Czechoslovakia) [Suicidal behavior and psychiatric diagnostics.] (Czech) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 351-355.—Summarizes postmortem diagnostic studies of 10,000 successful suicides and clinical diagnoses of 60,000 attempted suicides recorded in CSSR between 1963 and 1972. Diagnoses for successful vs attempted suicides were (a) psychotics 30% vs 10%; (b) neurotics or personality disorder 35% vs 71%; (c) alcoholics 17% vs 5%; (d) oligophrenics 1% vs over 2%; and (e) no mental disorder 17% vs 11%. The incidence of psychosis (mostly depressive) and neurosis was relatively higher in females than in males. Less than 2% of females were alcoholics, compared with over 20% of males. Treatment and prevention of suicides are discussed. (Russian summary)—*English summary*.

10036. Rizzola, N. & Rosadini, L. (U Genova, Istituto de Psichiatria, Italy) [Family and social determinants of female alcoholism.] (Italy) *Neuropsychiatria*, 1974(Jan-Jun), Vol 30(1-2), 71-78.—Based on a literature review and the authors' experience, the inference is made that there are no substantial differences in the etiology of alcoholism in men and women. Older age at onset, greater vulnerability to frustration, prodromal neurotic states with self-destructive tendencies, and sexual disturbances appear to be fundamental factors in female alcohol abuse. Family dynamics during the formative years are also considered important. Current changes in women's social and work roles are seen as accounting in part for the recent increase in female alcoholism. (French & German summaries) (18 ref)—*English summary*.

10037. Rosen, Alvin; Ottenberg, Donald J. & Barr, Harriet L. (Eagleville Hosp & Rehabilitation Ctr, PA) **Patterns of previous abuse of alcohol in a group of hospitalized drug addicts.** *Drug Forum*, 1975, Vol 4(3), 261-272.—Analyzed data from standard admission interviews and hospital charts for 183 male drug addicts, primarily heroin users. Findings show that the first substance used illegally by 89% was alcohol. Two-thirds of this population abused alcohol concurrently with other illegal drugs at some time. In about half of the patients, if intervention had occurred at an earlier age, the diagnosis probably would have been alcoholism or alcohol abuse instead of drug addiction. It is concluded that treatment of drug addicts should not be oriented too exclusively to a particular substance, but should encompass addictive illness in its totality. (15 ref)—*Journal abstract*.

10038. Ross, Olivia & Kreitman, Norman. (U Edinburgh, Royal Hosp, Scotland) **A further investigation of differences in the suicide rates of England and Wales and of Scotland.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 575-582.—National samples of case records of suicidal-type deaths from England and Wales and from Scotland were reassessed by officials in the other country. It was found that similar criteria for suicide

existed in both countries, and that there was no age-related tendency to misclassify cases. The lower official suicide rate among the old in Scotland was, therefore, considered not to result from ascertainment differences. It is concluded that Scottish records were not so briefly documented as to prevent the conclusive ascertainment of cause by England and Wales coroners. Cases which were designated "undetermined" in Scotland tended to be classified "accidental" by coroners. Reasons for the lower incidence of suicide in Scotland are discussed (18 ref)—*Journal abstract*

Learning Disorders & Mental Retardation

10046. Affleck, Glenn G. (U Connecticut, Health Ctr, Farmington) **Role-taking ability and the interpersonal competencies of retarded children.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 312-316.—Studied the relationship between social role-taking ability and competencies of 46 retarded children (mean CA 12.96 yrs) in dyadic interaction. Ss were given M. H. Feffer's role-taking task and assigned to dyads according

to rank-order position. A specially designed 2-person game, involving the delivery of differential reinforcements (pennies) to self or other, was used to operationalize the competencies of dyads in maximizing joint profit and in establishing a reciprocal exchange strategy. Results show that high role-taking ability dyads were not only more successful in the interpersonal task, but also demonstrated increasing success across trials. Role taking was also associated with the establishment and maintenance of a reciprocal exchange strategy and with MA and IQ (17 ref)—*Journal abstract*

10047. Anshuetz, Rose A. (Holstra U) **Variations in performance on serial discrimination reversals (SDR) as a function of the level of mental retardation.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4684.

10050. Bower, A. C. & Tate, D. L. (Rideau Regional Ctr, Ontario, Canada) **Cardiovascular and skin conductance correlates of a fixed-foreperiod reaction time task in retarded and nonretarded youth.** *Psychophysiology*, 1976(Jan), Vol 13(1), 1-9.—Studied changes in heart rate (HR), digital and cephalic pulse amplitude, and skin conductance during a fixed-foreperiod reaction time (RT) task with 16 male 15-18 yr old mentally retarded Ss (mean MA 9 yrs, 10 mo) and 2 nonretarded groups of 16 Ss each matched on MA and CA. All Ss received 20 RT trials with distractors (music) during the 4-sec preparatory interval (PI) and 20 trials without music in a counterbalanced design. The warning signal was a 1-sec light presentation and the reaction signal was an 82-db tone. Retarded Ss had longer and more variable RTs than controls. Retarded Ss had smaller HR accelerations and decelerations during the PI than the CA group but not the MA group. Further, the retarded group had a marginally lower tonic skin conductance level, smaller skin conductance responses, and smaller constrictions in cephalic pulse amplitude than the CA controls. Results are discussed in terms of attentional and arousal deficits in retarded persons. (35 ref)—*Journal abstract*.

10051. Call, Richard J. (George Peabody Coll for Teachers) **Verbal abstracting performance of low-SES children: An exploration of Jensen's theory of mental retardation.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4073.

10052. Clapp, Douglas F. (U Cincinnati) **Information processing in normals and mental retardates: The effects of organizational and memory factors in absolute judgments of spatial position.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4035-4036.

10053. de Csipkes, Robert A.; Smouse, Albert D. & Hudson, Bobbye A. (US Naval Academy) **Influence of reinforcement on the paired-associate learning of retarded and nonretarded children.** *American Journal of*

Mental Deficiency, 1975(Nov), Vol 80(3), 357-359. —Studied the effect of presence and types of reinforcement (tangible, social, or control) on paired associate (PA) learning performance using 24 retarded and 24 nonretarded 11-14 yr olds. A pictorial PA list (pictures used as stimulus and response items) was used. Data indicate that the influence of reinforcement on task performance was highly significant. Post-hoc comparisons showed that the use of tangible reinforcement did significantly increase the performance of both retarded and nonretarded Ss. Results also indicate that the nonretarded Ss performed significantly higher than their retarded counterparts.—*Journal abstract*.

10054. **Dodd, Barbara**. (MRC Developmental Psychology Unit, London, England) **Recognition and reproduction of words by Down's syndrome and non-Down's syndrome retarded children**. *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 306-311. —Compared 10 7.75-11.25 yr old children with Down's syndrome with 10 other severely retarded children on tests of recognition and reproduction of real and nonsense words after 0-, 15-, and 30-sec delay. Results indicate that Down's syndrome children performed better on the recognition task, but worse on the reproduction task after delay, as compared with the other retarded children. It is hypothesized that the articulatory deficit in the Down's syndrome group is part of a general motor disability due to a difficulty in preprogramming sequences of movements. (18 ref) —*Journal abstract*.

10056. **Dugas, Jeanne**. (Columbus Coll) **Effects of stimulus familiarity on the rehearsal strategies transfer mechanism in retarded and nonretarded individuals**. *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 349-356. —Investigated the possibility that the familiarity value of stimuli might be a component of the rehearsal strategies mechanism in N. R. Ellis's (1970) multiprocess theory of short-term memory. 40 retarded and nonretarded Ss (undergraduates) of equal CA (18.40 and 19.33 yrs, respectively) were given either paired associate pretraining of nonsense pictures with colors or were presented with nonsense pictures alone. Ss' performance on either an E- or S-paced serial memory task in which the nonsense pictures were employed as stimuli was compared. It was expected that pretraining would increase the familiarity value of nonsense stimuli for nonretarded and, to a lesser extent, retarded Ss, facilitating transfer of information from primary to secondary memory in both groups. Although predictions about the effects of pretraining on retention were not substantiated, results did support the hypothesis that a production deficiency in active encoding can account for the poor secondary memory of mentally retarded Ss. —*Journal abstract*.

10057. **Foster, Mary J.** (New York U) **An investigation of the relationship between developmental factors and the presence or absence of drooling among three- through five-year-old mental retardates**. *Dissertation*

Abstracts International, 1974(Jun), Vol 34(12-B, Pt 1), 6084.

10058. **Friedenberg, Harold L.** (Private practice, Richmond, VA) **A multidisciplinary evaluation of the child with a visually related learning disability**. *Journal of the American Optometric Association*, 1975(Oct), Vol 46(10), 975-977. —Concedes that not all learning disabilities result from vision or visual perceptual problems; also, that other disciplines are trained, prepared, and in a position to meet certain specific needs of children who have a vision-related learning disability. Optometrists are advised to familiarize themselves with the techniques of other disciplines. It is suggested that they direct themselves to the myriad of variables involved in the care of the underachieving or nonachieving child so that their own techniques will be of greater value.—*Journal abstract*.

10059. **Friedrich, Douglas & Hawkins, William F.** (Central Michigan U) **Response-stimulus interval performance of moderately retarded institutionalized subjects**. *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 281-285. —Based on previous dual reaction-time research with nonretarded and mildly retarded Ss, the expectancy- and capacity-limit hypotheses for the psychological refractory period effect were tested with 20 male moderately retarded Ss (mean CA 45.80). The design included regular-irregular procedure, response-stimulus intervals (250, 500, or 750 msec), signal (red or white light), and hand-preference variables. The finding of a psychological refractory period effect at the 250-msec response-stimulus interval was consistent with past research. Ss indicated a capacity limitation, resulting in the psychological refractory period effect at the rapid response-stimulus interval. Previous research with nonretarded and mildly retarded Ss has suggested an expectancy explanation for the psychological refractory period; this inconsistency is interpreted on the basis of an organismic confound.—*Journal abstract*.

10060. **Gleason, Jean B. et al.** (Boston VA Hosp, MA) **The retrieval of syntax in Broca's aphasia**. *Brain & Language*, 1975(Oct), Vol 2(4), 451-471. —The mechanisms underlying the order of difficulty of various grammatical elements and constructions and the consistency of strategies for paraphrasing were investigated in a study with 8 Broca's aphasics. Ss were administered a story completion test, designed to elicit 14 different English syntactic constructions. The 1st scorable response to each test item was analyzed with respect to omission of obligatory elements. The patterns of error recorded a consistent order of difficulty of the constructions, as well as a variety of strategies employed by the Ss in attempting to compensate for their limitations in syntactic encoding. Results confirm earlier observations that initial unstressed functors are particularly vulnerable. Correspondingly, a typical compensatory strategy employed by Broca's aphasics is to initiate their utterances with stressed words, like vocatives, or nouns where normal Ss produce pronouns. (18 ref) —*Journal abstract*.

10061. **Gorovitz, Judith A.** (Case Western Reserve U) **Comparison of the teaching styles of mothers of nonretarded children and mothers of retarded children**.

Dissertation Abstracts International, 1974(Feb), Vol 34(8-B), 4039.

10062. Hays, Victor L. (Arizona State U) **An automated procedure for measurement of far-point visual acuity in mentally retarded and normal children.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6239-6240.

10063. Johnson, Robert E. (U Kentucky, Coll of Education) **Interrelationships between intellectual, perception, and motor measurements in trainable retardates.** *American Corrective Therapy Journal*, 1975(Sep-Oct), Vol 29(5), 151-154.—Studied the possible relationship between IQ scores, perception dispersion angles, weight, body power, hand-sight and hand-sound response time, foot-sight and foot-sound response time, 25-yd sprinting time, and 300-yd run-walk time in 50 trainable mentally retarded Ss. Ages were 12-16 yrs and IQs were 25-49. Results indicated a significant relationship between perception and intelligence of trainable retardates but not between power and intelligence. A relationship was found between hand-sight, hand-sound, foot-sight, and foot-sound response times. Maturation appeared to play a role in the power produced by the Ss and in their weight, but not in IQ, perception response time, sprinting time, or 300-yd run-walk time.—D. R. Marino.

10064. Jones, Stephen E. (U Wisconsin) **An investigation of the effects of fixed ratio schedules of reinforcement on the response rate of retarded adults in a simulated work setting.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3533.

10065. Lambert, Jean-Luc. (U Liege, Belgium) **Extinction by retarded children following discrimination learning with and without errors.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 286-291.—4 groups of a total of 16 7.25-13.7 yr old retarded children were trained to respond to a triangle with apex up (S+) and not to a triangle with apex down (S-), with and without errors. A free-operant procedure in which responding to S+ was intermittently reinforced and a trial procedure in which all responses to S+ were reinforced were compared. An extinction procedure in which responses were no longer reinforced was then introduced. Extinction resulted in substantial responding during S- for all groups, except the free-operant errorless group. S- responding during extinction did not differ between the errorless and error-trial groups and was maximum for the free-operant error group.—*Journal abstract.*

10066. Langer, Stanislav. (Pedagogická fakulta, Hradec Králové, Czechoslovakia) **[The aspiration level of mental retardates.]** (Czech) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(2), 123-138.—Tested 200 pupils in regular schools (9, 12, and 15 yrs old) and 50 pupils in special schools to determine their ideas about their future professions. Most of the mentally retarded chose a manual profession, particularly the older ones; none chose intellectual work. The normal children showed the opposite tendency, but their interest in jobs requiring higher education decreased with age. There was no difference between boys and girls among the retardates; among the normals, boys chose occupations requiring

basic school education and girls chose jobs requiring a high school education.—*Journal summary.*

10068. Martin, A. Damien et al. (VA Hosp, New York, NY) **A process model of repetition in aphasia: An investigation of phonological and morphological interactions in aphasic error performance.** *Brain & Language*, 1975(Oct), Vol 434-450.—Analyzed the articulatory errors made by 10 adult male aphasics (ages 43-66 yrs) in the repetition of words and nonsense syllables. A 5-part process model was used in this analysis and included the following components: (a) preliminary analysis, (b) syllabic structure, (c) load, (d) decision, and (e) semantic or lexical. Results indicate that the number of cognitive units within stimuli were a major factor in the number, type, and position of error, and that a segmentation process, both grammatically and phonetically dependent, was operating in the responses. Overall, results are interpreted to support a "reduction of efficiency" view of aphasia. (20 ref)—*Journal abstract.*

10071. Philips, Irving & Williams, Nancy. (U California, Medical School, San Francisco) **Psychopathology of mental retardation: A study of 100 mentally retarded children: I. Psychopathology.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1265-1271.—Studied 100 mentally retarded children of all ages referred to a psychiatric clinic in regard to the severity of their retardation, their ages at the time of referral, their social class, presenting symptoms and diagnoses, and the effects of organicity on their clinical pictures. It was found that 38 Ss were psychotically disturbed, 13 had no evidence of psychiatric disorder, and 49 showed symptoms of characterologic, neurotic, behavioral, or situational disorders. Although the incidence of emotional disorder was high among Ss, their symptoms did not differ in kind from those found in a group of nonretarded children referred to the clinic. 10074. Ryan, Mike & Jones, Bill. (Baillie-Henderson Hosp, Toowoomba, Australia) **Stimulus persistence in retarded and nonretarded children: A signal detection analysis.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 298-305.—Tested 9 institutionalized educable mentally retarded (mean CA 12.7 yrs) and

9 nonretarded (mean CA 13.01 yrs) males on a visual backward masking task. Signal detection analysis was used to separate the sensory and nonsensory aspects of behavior, and the presentation of stimuli was randomized to minimize the formation of effective strategies. 2 sets of instructions, strict and lenient, and 2 stimulus durations, 10 and 30 msec, were used in a repeated measures design. No differences were found between the groups on interstimulus interval threshold or measures of stimulus sensitivity, criterion placement, and false positive rate. Retarded Ss showed significantly greater inter-S variability in criterion placement but failed to raise their criterion in response to strict instructions. Results suggest that (a) stimulus-trace concepts of retardation have been confounded by retarded Ss' inability to compete effectively with nonretarded Ss in the experimental situation, and (b) signal detection procedures are a useful alternative to traditional psychophysical techniques in such comparative research. 10075. Silverstein, A. B.; Brownlee, Linda; Hubbell, Mimi & McLain, Richard E. (Neuropsychiatric Inst Pacific State Hosp Research Group, Pomona, CA) **Comparisons of two sets of Piagetian scales with severely and profoundly retarded children.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 292-297.—Administered H. H. Corman and S. K. Escalona's (1969) scales for object permanence and spatial relationships and the corresponding scales of I. C. Uzgis and J. Hunt (1975) to 64 severely and profoundly retarded children (mean CA, 14 yrs). Most of the findings applied equally to both sets of scales: the scoring reliability was very high; the total scores did not vary as a function of S characteristics (except IQ) or testing conditions; differences in the difficulty of the items did not correspond closely to those reported for nonretarded infants, and the scalability of the items was much lower. Less time was required to administer the 2 scales constructed by Uzgis and Hunt, but their object permanence scale showed a pronounced ceiling effect and the internal consistency of their spatial relationships scale was unacceptably low. (18 ref)—*Journal abstract*.

10076. Sternlicht, Manny; Staaby, Judy & Sullivan, Ina. (Willowbrook Developmental Ctr, Staten Island, NY) **Birth order, maternal age, and mental retardation.** *Mental Retardation*, 1975(Dec), Vol 13(6), 3-6. Presents a statistical comparison between 2 groups of mentally retarded individuals selected from an institution and a community-based center. The 378 individuals had CAs of 3-69 yrs and IQs of 6-90. Birth order, mother's age at birth of the child, and etiology of mental retardation were analyzed using a chi-square for 2 independent samples. Results identify 2 high-risk populations—very young mothers, CAs 16-20 yrs, and mothers aged 35-45 yrs—and reveal that both mother's age and cause of retardation are related to whether or not the child will remain in the community. It is concluded that results present a strong case for preventive emphasis as part of the long-range goals of mental retardation services.—*Journal abstract*.

10077. Tallal, Paula. (Johns Hopkins U, Medical School, John F. Kennedy Inst) **Perceptual and linguistic factors in the language impairment of developmental**

dysphasics: An experimental investigation with the Token Test. *Cortex*, 1975(Sep), Vol 11(3), 196-205.—Administered the Token Test to 12 dysphasic and 12 normal control 6-9 yr old children. The dysphasic Ss' performance, although significantly poorer than that of the controls on Parts 2-5 of the test, appeared to follow a similar pattern. Both groups were errorless on the initial parts of the test. As the demand on auditory retention increased, however, the performance of both groups deteriorated. The addition of grammatical complexity on Part 5, rather than causing even further deterioration in performance, actually improved performance of both groups, although not significantly. Dysphasic children appear to have greater difficulties with auditory retention and verbal memory than they do with grammatical or structural language complexities. It is suggested that the observed gross language impairment of dysphasic children does not result from a specific inability to analyze linguistic information, but rather from an inability to analyze the rapid stream of acoustic information which characterizes speech and is essential to normal speech perception and language development.—*Journal summary*.

10078. Wanschura, Patricia B. & Borkowski, John G. (State University Coll New York, Cortland) **Long-term transfer of a mediational strategy by moderately retarded children.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 323-333.—Instructed 60 moderately retarded children (mean CA 12.34 yrs) to produce prepositional mediators by physically manipulating paired associate (PA) objects in learning 3 9-item PA lists. Mediational training, distributed across days or weeks, consisted of 1 or 3 different prepositions supplied for 1/2 or for all of the items. Mediation Ss performed significantly better than control Ss on an unaided test list administered 2 wks after training, regardless of distribution of training, degree of aid, or number of prepositions provided during training sessions. The degree of transfer, which was larger than in previously reported studies, was attributed to the instructional procedures requiring active production of prepositional mediators, coupled with an emphasis on their value. It is suggested that individual variability in mediational transfer should be considered in future research on mediational transfer.—*Journal abstract*.

10082. Canfield, Kenneth L. (State U New York, Buffalo) **Relationships among functional articulation**

disorders, visual perception, and auditory discrimination in elementary school age boys. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4112-4113.

10083. Dorman, M. F. & Porter, R. J. (Haskins Lab, New Haven, CT) **Hemispheric lateralization for speech perception in stutterers.** *Cortex*, 1975(Jun), Vol 11(2), 181-185.—16 adult right-handed moderate-to-severe stutterers and 20 nonstuttering controls were given a dichotic nonsense-syllable test to determine hemispheric lateralization for speech. Both male and female stutterers evidenced right-ear advantages in syllable identification similar in magnitude to those found for normals. Data confirm other reports of no difference in cerebral speech lateralization for stutterers and nonstutterers and, therefore, lend no support to theories that relate stuttering to abnormalities in cerebral lateralization. (19 ref)—*Journal summary*.

10084. Gardner, Howard; Albert, Martin L. & Weintraub, Sandra. (Boston U Medical School, Aphasia Research Unit) **Comprehending a word: The influence of speed and redundancy on auditory comprehension in aphasia.** *Cortex*, 1975(Jun), Vol 11(2), 155-162.—To assess the contribution of various factors to comprehension of a target word, an auditory comprehension test was devised and administered to 46 aphasic males. Ss were required to select from an array that picture which corresponded to a spoken target word. Each S heard the target word under 5 conditions (a) target spoken alone, (b) target embedded in a neutral sentence enunciated at a normal rate of speaking, (c) target in a neutral sentence enunciated at a slow rate of speaking, (d) target embedded in a sentence containing semantic support, and (e) target embedded in a sentence containing a semantically deceptive element. Semantic redundancy and rate of presentation made contributions to comprehensibility. Semantic confusions were prevalent among all aphasics but, contrary to earlier reports, posterior patients were especially prone to acoustic confusions. Except for conduction aphasics, Ss were more likely to confuse words which began with the same sounds than words which ended with the same sounds. Ss with adequate comprehension at the start of the testing displayed a uniform tendency to improve on the conditions administered later, while those with impaired comprehension at the start usually did not. (19 ref)—*Journal summary*.

Physical & Psychosomatic Disorders

10087. Bauman, Mary K. (Nevill Interagency Referral Service, Philadelphia, PA) **Guided vocational choice.** *New Outlook for the Blind*, 1975(Oct), Vol 69(8), 354-360.

Notes that many visually handicapped people never have the opportunity to make an effective vocational choice either because their handicap is, or is thought to

be, too limiting, or because they cannot picture themselves performing in different types of jobs. Informed vocational choice is not possible unless the individual and those who counsel him are aware of job alternatives as well as the individual's interests, abilities, and those personal qualities that affect job success. Ways of gathering the information needed to make a guided vocational choice are reviewed—through an extensive history, vocational and psychological testing, and extended testing with work samples and situational assessment. (U Verona, Clinica Pediatrica, Italy) **EEG of a nocturnal seizure in a patient with "Benign epilepsy of childhood with Rolandic spikes."** *Epilepsia*, 1975(Sep), Vol 16(3), 497-501.—Reports the 1st EEG recording of a 10-yr-old boy with benign epilepsy of childhood with Rolandic spikes during a partial motor (facial) seizure, which occurred during Stage 2 of natural sleep. (French, Spanish & German summaries)

10090. Beutler, Larry E. et al. (Baylor Coll of Medicine, Houston) **MMPI and MIT discriminators of biogenic and psychogenic impotence.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 899-908.—Administered the Male Impotence Test (MIT) and the MMPI to 32 17-67 yr old male patients complaining of impotence. Subsequently, the tumescence of these patients was recorded for 1-3 nights. An attempt was made to evaluate the predictive validity of the MIT and the MMPI in discriminating between those who produced normal penile tumescence during sleep and those who did not. Normal nocturnal tumescence was taken to indicate the physiological capacity for achieving arousal and hence was suggestive of psychogenic impotence. Results suggest that the MIT is without value for differentiating between psychogenic and biogenic impotence, whereas 2 rules from the MMPI (*Mf* scale scores above 60 and one or more scales above a *T* score of 70) appropriately classified 90% of the cases. The samples of biogenic and psychogenic impotence did not differ, however, in degree or pathology nor was there any specific profile related to either condition.—*Journal abstract*.

10091. Bisiach, Edoardo; Capitani, Erminio & Spinnler, Hans. (U Milano, Italy) **Focal hemisphere and visuoperceptual categorization.** *Journal of Neurology, Neurosurgery & Psychiatry*, (Nov), Vol 38(11), 1115-1120.—Investigated visuoperceptual categorization in patients with unilateral brain damage (BD) by a task in which meaningless shapes had to be classified with reference to a number of prototype patterns. Ss were 129 BD patients and 30 normal controls. Right BD Ss with visual field defect turned out to have a narrower categorization span. As this outcome seems to be scarcely consonant with a lower level disorder of visual processing, a major competence of the right hemisphere is suggested for visuoperceptual categorization. (20 ref)—*Journal abstract*.

10095. **Cermak, Laird S.** (VA Hosp, Boston, MA) **Imagery as an aid to retrieval for Korsakoff patients.** *Cortex*, 1975(Jun), Vol 11(2), 163-169.—Conducted 2 experiments with a total of 6 Korsakoff patients and 6 alcoholic controls to determine whether the use of nonverbal visual information would aid Korsakoff patients in the retrieval of verbal information. Ss learned a 5-item paired associate task under rote, imagery, and cued learning conditions. Under all conditions the Korsakoff patients took more trials to learn than did the controls. Both imagery learning and cued learning were easier than rote learning for the Korsakoff patients when recall was used as the learning index. When a recognition measure was used instead of free recall, imagery learning proved easiest. In Exp II the patients were given the cue during presentation but not during retrieval. Under this condition the Korsakoff patients learned no more rapidly than they did by rote, no matter which response measure was required. It is concluded that imagery can aid both storage and retrieval of verbal information for Korsakoff patients, while cuing aids only the retrieval process.—*Journal summary.*
10096. **Chase, Joan B.** (Rutgers State U, Medical School, Piscataway) **Developmental assessment of handicapped infants and young children: With special attention to the visually impaired.** *New Outlook for the Blind*, 1975(Oct), Vol 69(8), 341-349, 364.—Posits that to effectively plan for services for young handicapped children, early objective developmental assessments are necessary. Although caution must be exercised in their use, assessment measures for infants can help to prevent, ameliorate, or uncover the difficulties that the handicapped child might face. By using a battery of assessments, a profile of the child's abilities, strengths, weaknesses, and disabilities is yielded. The uses of a number of instruments are reviewed, and a case study of a 3-yr-old is presented. (1½ p ref)—*Journal abstract.*
10097. **Collins-Ahlgren, Marianne.** (Gallaudet Coll Pre-School) **Language development of two deaf children.** *American Annals of the Deaf*, 1975(Dec), Vol 120(6), 524-539. Recorded expressive language samples from 2 deaf girls from their 16th through 44th mo indicated an ability to generate novel sentences and to express a wide range of grammatical and semantic relations. Through a total communication program Ss learned new forms to express productive (old) functions while new functions were first expressed by old forms. Some English forms were learned for the semantic and grammatical functions expressed through the "language of sign" forms. A case grammar analysis suggested that these deaf children were developing language equivalent to that of their hearing peers.—*Journal abstract.*
10098. **Comer, Ronald C. & Piliavin, June A.** (North Central Massachusetts Mental Health Ctr, Fitchburg) **As others see us: Attitudes of physically handicapped and normals toward own and other groups.** *Rehabilitation Literature*, 1975(Jul), Vol 36(7), 206-221.—Conducted a statistical analysis of the attitudes of 34 physically normal, 34 recently disabled, and 15 long-term disabled persons, using a questionnaire technique. Results show that (a) the attitudes of normals were consistently more favorable to the handicapped than toward normals; (b) the handicapped, though less favorable to both normals and handicapped, were nevertheless more favorable to the handicapped than to normals; (c) the attitudes of long-term handicapped toward normals were more favorable than those of recently handicapped persons. 11 tables of detailed data are provided.—*S. L. Warren.*
10099. **Corlew, Marilyn M. & Nation, James E.** (VA Administration Ctr, Wood, WI) **Characteristics of visual stimuli and naming performance in aphasic adults.** *Cortex*, 1975(Jun), Vol 11(2), 186-191.—Studied 14 aphasic adults to compare aphasic naming performance on life-size realistically shaped and colored objects seen in daily life with the same stimuli depicted in reduced-size, uncolored line drawings. Objects and pictures were taken from the Porch Index of Communicative Ability. Both initially correct and self-corrected naming responses were compared for the 2 sets of visual stimuli. In contrast to some studies that have also varied the physical characteristics of size, color, and dimensionality, the present study found no significant differences in naming performance for aphasic patients. This evidence would suggest that a choice between pictures and objects will seldom be crucial to diagnosis or therapy with aphasic naming problems.—*Journal summary.*

10101. **Culen, Ladislav & Trávníková, Margaréta.** (Ústav nápravej výchovy, Bratislava, Czechoslovakia) **[Psychological findings on epileptic children with good school progress.]** (Slovak) *Psychologická a Patopsychologická Dielala*, 1975, Vol 10(2), 139-150.—25 epileptic children showing good progress in school were compared with their healthy siblings by means of the WISC, the Rorschach, a numerical test, and a reading test. Ss were 7-16 yrs old. Most of the psychological disorders in the epileptic children, including some of their deficiencies in intellectual ability, were based on disturbances of attention, probably due to organic changes in the brain. In *epilepsia temporalis* the intellectual abilities seem to be less disturbed than in other types of epilepsy.—*Journal summary.*
10102. **Danhauer, Jeffrey L. & Appel, Margret A.** (Bowling Green State U) **Uni- and multisensory perception of speech stimuli by normally hearing and hearing impaired individuals.** *Annals of the New York Academy of Sciences*, 1974, Vol 241, 23-32.—Investigated the effects of different types of speech stimuli and different modes of presentation

Study 1 indicated that both normally hearing and hearing impaired Ss relied heavily on their preferred sensory modality. Study 2 revealed perceptual features utilized by normally hearing Ss in visual, tactile, and visual-tactile input conditions. Primary features were *easy to see/hard to see* for the visual and visual-tactile modalities and *voicing* for the tactile modality.—*Journal abstract*.

10103. de Santo, Natale G.; Perna, Nicola; di Paolo, Erminio & Giordano, Carmelo. (Cattedra di Nefrologia Medica, Piazza Miraglia, Naples, Italy) **Ethyl alcohol sniffing by patients undergoing hemodialysis.** *JAMA: Journal of the American Medical Association*, 1975(Nov), Vol 234(8), 841-842.—Reports the cases of 7 uremic patients undergoing long-term hemodialysis who became addicted to vapors of denaturated ethyl alcohol. Sniffing produced relaxation, euphoria, and a sense of well-being. In all but 1 patient, this was the only form of deviance. 2 patients who tried stopping this practice while under psychiatric help were unsuccessful because of acute abstinence symptoms.

10104. Dennis, Maureen & Kohn, Bruno. (Hosp for Sick Children, Toronto, Canada) **Comprehension of syntax in infantile hemiplegics after cerebral hemidecortication: Left-hemisphere superiority.** *Brain & Language*, 1975(Oct), Vol 2(4), 472-482.—The ability to discriminate the meaning of spoken statements varying in syntactic form was compared in 4 right and 5 left hemidecortication infantile hemiplegics. Ss were 8-28 yrs old. Right hemidecorticates, relative to the left operated group matched for Verbal IQ (as measured by the WISC or the WAIS), showed superior comprehension of passive negative, but equivalent comprehension of active affirmative and active negative, sentences. After perinatal cerebral pathology and subsequent decortication, syntactic skills are not mediated equivalently by left and right remaining hemispheres.—*Journal abstract*.

10105. Elonen, Anna S. & Zwarenstein, Sara B. (U Michigan, Medical Ctr) **Sexual trauma in young blind children.** *New Outlook for the Blind*, 1975(Dec), Vol 69(10), 440-442.—Presents case examples of blind children who were traumatized by early sexual experiences. Attention is focused on incidents ranging from unintentional direct sexual stimulation to severe intentional sexual abuse inflicted by others on the blind child. The alleviation of isolation and the alertness of parents and professionals in preventing deviant incidents is stressed, and a plea made for innovative sex education for blind children.—*Journal abstract*.

10106. Evans, A. Donald. (Mercer U) **Experiential deprivation: Unresolved factor in the impoverished socialization of deaf children in residence.** *American Annals of the Deaf*, 1975(Dec), Vol 120(6), 545-552.

Compared socialization problems among 123 deaf adolescents at a state residential school and 321 normal students at 2 high schools. Data reveal a truncated socialization process among the deaf Ss due to experiential deprivation, a process which involves a restricted type of communication at home, separation from hearing peers and from the opposite sex, strict dating rules, and lack of freedom to leave campus. Twice as many deaf as hearing Ss have never had a date. Tested on a set of dating items, 5 times as many deaf as hearing Ss missed

over half the items. A comparison of deaf Ss with communication advantages (having deaf parents, having siblings and friends who use manual methods, late onset of deafness, early manual communication at home) to those without such advantages showed no greater knowledge of socialization items. (18 ref)—*Journal abstract*.

10108. Ferriss, Gregory S. & Dorsen, Marilyn M. (Louisiana State U Medical Ctr, New Orleans) **Agnesis of the corpus callosum: I. Neuropsychological studies.** *Cortex*, 1975(Jun), Vol 11(2), 95-122.—Compared the results of clinical neurological and psychological tests in 4 patients with agnesis of the corpus callosum. Results show low intelligence test performance and impairment of instrumental learning. There were deficits in bimanual coordination, spatial orientation, transfer of kinesthetic learning, and complex visual motor response associations. All Ss demonstrated normal static body schema, tactile discrimination learning, and transfer, with no laterality differences for language. The literate Ss read in both visual and half-fields, suggesting hemispheric equipotentiality for these functions. Results also show that each hemisphere had attained a high level of competence in some functions which are usually found largely in 1 dominant hemisphere. Regarding somatosensory perception and body schema, each hemisphere subserved the entire individual rather than primarily the contralateral half. Such duplication of function in each hemisphere partially compensated for the lack of interhemispheric transfer which is mediated by the corpus callosum in normal individuals. Visual and kinesthetic functions were more restricted and contralaterally controlled, as demonstrated by deficits in transfer. (67 ref)—*Journal summary*.

10109. Freedman, Saul. (Ctr for Independent Living, New York Infirmary, NY) **The assessment of older visually impaired adults by a psychologist.** *New Outlook for the Blind*, 1975(Oct), Vol 69(8), 361-364.—A psychologist describes his role in a specific rehabilitation facility for older visually impaired people. The uses of the assessment process for this population and the participation in the process by the student (client, patient), his family, other staff members, as well as the psychologist, are detailed. Tests used effectively with this population (e.g., the Purdue Pegboard Test, the verbal portion of the WAIS, Sentence Completions Test for Use with the Visually Handicapped, and M. K. Bauman's Emotional Factors Inventory) are briefly discussed.—*Journal abstract*.

10110. Friedlander, Steven & Shaw, Edward. (Family Counseling Service, Hackensack, NJ) **Psychogenic factors in sudden infant death: Some dynamic speculations.** *Clinical Social Work Journal*, 1975(Win), Vol 3(4), 237-278.—Explains the Sudden Infant Death Syndrome (SIDS) theoretically as a psychogenic phenomenon. Infantile apnea, which has been found to be closely associated with SIDS, is described as maladaptive, regressed behavior occurring in response to tension overload, rather than as a biologic dysfunction. Some of

H. S. Sullivan's work is presented to support the concept that infants possess some ability to mediate tension and to respond differentially to environmental changes. Epidemiological findings on SIDS are highlighted, and a pattern is said to emerge which upholds the theory presented. Some of the tensions which might cause the infant to seek to recreate the paradisiacal qualities of the womb are discussed. Comments by 5 critics follow the article, and the authors reply to their criticisms. (30 ref)—S. R. Stein.

10111. Gastaut, H.; Gastaut, J. L.; Gonçalves e Silva, G. E. & Fernandez Sanchez, G. R. (Cir Hospitalo-Universitaire of Marseilles, France) **Relative frequency of different types of epilepsy: A study employing the classification of the International League against Epilepsy.** *Epilepsia*, 1975(Sep), Vol 16(3), 457-461.—Data from the records of 562 epileptic patients indicate that about 75% can be assigned to one of the diagnostic categories of the International League against Epilepsy. When patient age was taken into account, partial epilepsy was more common than generalized epilepsy in patients of all ages. In contrast, generalized epilepsy was more frequent in Ss under 15 than partial epilepsy. (French, Spanish & German summaries)

10112. Gribbin, Brian; Steptoe, Andrew & Sleight, Peter. (Radcliffe Infirmary, Dept of Cardiovascular Medicine, Oxford, England) **Pulse wave velocity as a measure of blood pressure change.** *Psychophysiology*, 1976(Jan), Vol 13(1), 86-90.—Describes the use of arterial pulse wave velocity (PWV) as a continuous measure of blood pressure changes. Theoretical considerations indicate that changes in PWV reflect changes in blood pressure, and an experiment was carried out to assess this relationship. PWV along an arm artery was monitored in 26 8-80 yr old patients, 12 with high blood pressure and 14 normals. Arterial distending pressure of the limb was altered over a wide range by means of externally applied positive and negative pressures. Results show that changes in PWV reliably follow changes in blood pressure. This method is considered suitable for studies requiring changes rather than absolute values of blood pressure. 10113. Gross, Yigal. (McGill U, Montreal, Canada) **Central and peripheral determinants of localization of body parts.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6239.

10114. Gustafson, Lars & Hagberg, Bo. (U Lund Hosp, Sweden) **Emotional behaviour, personality changes and cognitive reduction in presenile dementia: Related to regional cerebral blood flow.** *Acta Psychiatrica Scandinavica*, 1975, Suppl 257, 39-71. Investigated behavior disturbances and their relationship to cognitive defect levels, defined psychometrically, in 50 patients with presenile dementia. Results indicate that changes in emotional behavior and personality had specific correlations with cognitive level and regional cerebral blood flow. The analyses found evidence for 2 types of relationships in presenile dementia: relationships between hemisphere lesions and different behavior syndromes within presenile dementia and relationships between remaining cerebral functions and active syn-

tom formation within the different behavior syndromes. (3 p ref)—*Journal summary*.

10115. Gustafson, Lars. (U Lund Hosp, Sweden) **Psychiatric symptoms in dementia with onset in the presenile period.** *Acta Psychiatrica Scandinavica*, 1975, Suppl 257, 9-35.—Studied psychiatric symptoms in 57 43-71 yr old patients with signs of organic dementia beginning in the presenile period. A conventional factor analysis, performed on symptoms recorded by a psychiatrist, presented 14 clusters of symptoms. 3 of these factors contained symptoms indicating severe dementia. The clusters included amnesia-apraxia, amnesia-confusion, agraphia-alexia, depression, paranoia, delusions, ixophrenia, hypochondria, explosive temper, affective lability, unsteady gait, anarthria-mutism, psychomotor retardation, and psychomotor overactivity-euphoria. It is concluded that these factors are useful in a qualitative as well as quantitative description of patients with a presenile dementia. The same factors have been used to study the relationship of psychiatric symptoms to regional cerebral blood flow and to psychological test performances.—*Journal summary*.

10116. Habiňáková, Erika & Turčanová, Nada. (U Karlova, Katedra psychologie, Bratislava, Czechoslovakia) [Psychological investigation of diabetic children.] (Slovak) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(2), 99-114.—Compared 30 diabetic children 8-15 yrs old with 30 healthy children, using Raven's Progressive Matrices, the Eysenck Junior Personality Inventory, the Rosenzweig Picture-Frustration Study, Anthony-Bene's Family Relationship Technique, an anamnestic questionnaire for mothers, and a questionnaire determining the extent of the child's knowledge of diabetes. In 73.3% of the cases no hereditary factor was found. The differences in IQ between the ill and healthy groups were not significant. The onset time and degree of illness showed no effect on school progress. Diabetic Ss showed 63% neuroticism compared with 37% in healthy Ss. The diabetic Ss evaluated their mothers less positively and perceived them as less indulgent, while the mothers seemed overly anxious and worried. Diabetics showed a normal reaction to frustration.—*Journal summary*.

10117. Haffen, Louis; Leichter, Steven & Reich, Theodore. (Private practice, Providence, RI) **Organic brain dysfunction as a possible consequence of postgastrectomy hypoglycemia.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1321-1324.—Notes that, unlike the fasting hypoglycemia the reactive hypoglycemia including postgastrectomy hypoglycemia are generally not believed to result in serious neuropsychiatric dysfunction. Two patients with progressive mental deterioration and alimentary hypoglycemia are described, and it is suggested that clinicians should recognize the possibility of serious neuropsychiatric sequelae of postgastrectomy hypoglycemia. (24 ref)—*Journal abstract*.

10122. Katakis, Charis D.; Christea-Doumanis, Mariella & Vassiliou, Vasso G. (Athenian Inst of Anthropos, Athens, Greece) **Socio-cultural factors and the male ulcer patient.** *International Mental Health Research Newsletter*, 1975(Fal), Vol 17(3), 4-6.—Examined 20 urban and 20 rural Greek male ulcer patients and 20 urban control Ss in an effort to separate universal from milieu-specific ulcer personality characteristics. Story sequence analysis of the TAT gave evidence that (a) Greek urban ulcer patients resembled urban ulcer patients elsewhere, lacking assertiveness to resolve interpersonal dependence-independence conflicts; (b) urban nonulcer Ss experienced the same stresses as ulcer patients but had resolved their dependence-independence conflicts; (c) rural ulcer patients seemed to be reacting mainly to adversities other than interpersonal conflict; and (d) none of the ulcer patients showed gross deviations from the normal personality. The dilemma of the urban Greek male is felt to be related to the technologically induced decline of traditional interpersonal relationships. The importance of holistic research that includes individuals' cultural milieu is emphasized. —C. A. Heikkinen.

10123. Koch, Inge. (Karl-Marx-U, Klinik für Kinder-neuropsychiatrie, Leipzig, E Germany) **[The concentration-action method of diagnosing early childhood cerebral lesions.]** (Germ) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(Dec), Vol 26(12), 747-754.—Describes the development of a psychodiagnostic test based on the ability to differentiate optical figures. The trial and standardization of the test on a normal population, and its successful use in clinical practice are reported. In more than 100 cases mild and moderate cerebral lesions were diagnosed. For these patients the HAWIK (a German version of the WISC) showed that the verbal element was significantly better than the active element. However, results from the mosaic and figure-laying test showed no deviation from the norm. The IQs obtained using Mann's sign test were consistently below those obtained by the HAWIK. Most of the IQs were typical of children 2 yrs younger than the patients tested in this program. (Russian summary)—*English summary*.

10124. Lansdell, H. & Smith, F. J. (NIH, National Inst of Neurological & Communicative Disorders & Stroke, Bethesda, MD) **Asymmetrical cerebral function for two WAIS factors and their recovery after brain injury.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 923.—Investigated whether verbal factor scores of the WAIS would show more resilience in young adults than the nonverbal scores. Data from 119 servicemen with clearly lateralized brain injuries agree with those from other studies indicating resiliency for a verbal factor and the likelihood of some permanent impairment for a nonverbal factor after brain damage.

10125. Lattanzio, Sandra M. (State U New York, Buffalo) **Analysis of deficiencies in the verbal memory processes of amnesic patients.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4088.

10126. Levine, Jacob & Zigler, Edward. (West Haven VA Hosp, CT) **Denial and self-image in stroke, lung cancer, and heart disease patients.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 751-757.—60 male 20-74 yr old stroke, lung cancer, and heart disease patients, and 20 male 23-58 yr old healthy controls assessed their present real and ideal selves and were also asked to make these assessments for the period prior to their illness (about 1 yr ago for the controls). All 3 patient groups were found to employ denial, as indicated by the relatively small difference between their real and ideal selves before and after the onset of illness. The greatest amount of denial was found for stroke patients, while cancer patients displayed more denial than did heart patients. Results indicate that the relative equanimity of the stroke patients was produced by their denying a demanding level of aspiration.—*Journal abstract*.

10127. Mandelberg, Ian A. & Brooks, D. N. (Glasgow U, Scotland) **Cognitive recovery after severe head injury: I. Serial testing on the Wechsler Adult Intelligence Scale.** *Journal of Neurology, Neurosurgery & Psychiatry*, (Nov), Vol 38(11), 1121-1126.—Administered the WAIS serially to 40 severely head-injured Ss (mean age, 28 yrs) and compared results with a matched group of 40 non-injured men. Scores on the verbal subtests showed less initial impairment and were faster to recover to the level of the comparison group than were the nonverbal subtest scores. Verbal IQ of the head-injured group approached that of the comparison group within 1 yr of injury, while recovery of performance IQ continued over 3 yrs. Implications of results are discussed, and it is noted that results tend to be congruent with the finding of S. J. Dencker (1958) that duration of post-traumatic amnesia does not predict cognitive outcome. (35 ref) —*Journal abstract*.

10128. Mandelberg, Ian A. (Glasgow U, Scotland) **Cognitive recovery after severe head injury: II. Wechsler Adult Intelligence Scale during post-traumatic amnesia.** *Journal of Neurology, Neurosurgery & Psychiatry*, (Nov), Vol 38(11), 1127-1132.—Administered the WAIS to 2 matched groups of severely head-injured patients. There were 14 men and 2 women (mean age, 29 yrs) in each group. The 1st administration was early in the recovery period, when group I was still in posttraumatic amnesia (PTA). WAIS results for this group were significantly lower than those of group II, who were fully

conscious. A follow-up at a later stage of recovery found that Group I had substantially caught up with Group II on the WAIS. At both administrations the WAIS subtest scores were correlated with clinical data, and changes in the pattern of correlations between PTA and full consciousness suggest that the former represents a qualitatively, and not merely a quantitatively, distinct phase of recovery.—*Journal abstract.*

10131. Millar, Susanna. (U Oxford, England) Effects of phonological and tactual similarity on serial object recall by blind and sighted children. *Cortex*, 1975(Jun), Vol 11(2), 170-180.—In 2 experiments, 30 blind and 60 sighted 3-10 yr olds were tested on serial recall of easily named objects, differing in (a) name sound and tactual characteristics; (b) name sound, but similar in feel; and (c) feel, but similar in name sound. Significant recall decrements were found for tactually similar relative to dissimilar series for both blind and sighted Ss able to cope with set sizes of up to 5 items, but not for Ss under a set size of 6. Blind and sighted Ss tested under set sizes of 4 and 5 or 6 items showed recall decrements for phonologically similar compared to dissimilar lists, but Ss under a set size of 2 or 3 did not. It is argued that the results demonstrate both tactual and phonological encoding of tactually presented material by children.—*Journal summary.*

10132. Milman, Doris H. (State U New York, Downstate Medical Ctr, Brooklyn) Gilles de la Tourette syndrome: Extended follow-up. *New York State Journal of Medicine*, 1975(May), Vol 75(6), 892-895. Describes in detail 1 female and 3 male cases of Gilles de la Tourette syndrome. This symptom complex can be associated with a variety of psychiatric disorders and is amenable to whatever treatment is appropriate to the underlying disorder. Patients were followed for 3-21 yrs. Symptom onset was middle childhood for 3 cases and adolescence for 1. 2 were diagnosed as reactive disorders, 1 as a personality disorder, and 1 as schizophrenic. All the males exhibited body and sexual anxiety. Treatment consisted of psychotherapy and medication. The outcome was favorable in 3 patients. The one poor outcome was associated with adolescent onset and major psychopathological causes (schizophrenic diagnosis). All patients were of American Jewish origin and had normal intelligence, and 3 came from intact families. 2 cases were preceded by traumatic events; there were no antecedent events in the other 2 cases.—*P. R. Sweet.*

10133. Morse, John L. Answering the questions of the psychologist assessing the visually handicapped child. *New Outlook for the Blind*, 1975(Oct), Vol 69(8), 350-353. 10141. **Rassidakis, N. C. et al.** (U Athens, Greece) **Illnesses of the psychosomatic continuum and coronary heart disease.** *International Mental Health Research Newsletter*, 1975(Fal), Vol 17(3), 6.—Studied the possibility that coronary heart disease should be included on the psychosomatic illness-continuum verified in the authors' previous studies (1971-1974). Ss included 84 schizophrenic patients, 123 cancer patients, 152 patients suffering from psychosomatic diseases, and 561 controls; i.e., hospitalized internal medicine patients not suffering from any of the above diseases. All groups were examined for evidence of coronary heart disease. Chi-square analysis revealed that (a) a significant ($p < .001$) relationship appeared between disease entity and coronary heart disease; and (b) the incidence of coronary heart disease was higher for the control patients than for the cancer or psychosomatic illness patients, while schizophrenics differed little from the control patients. It is concluded that coronary heart disease should not be included among the diseases on the illness-continuum (schizophrenia, malignant neoplasms, psychosomatic illnesses, and diabetes mellitus).—C. A. Heikkinen.

10144. **Rubin, Martha & Ventry, Ira M.** (Lexington Hearing Ctr, Jackson Heights, NY) **Speech detection thresholds and comfortable loudness levels for speech in children with limited hearing.** *American Annals of the Deaf*, 1975(Dec), Vol 120(6), 565-567.—20 11-17 yr olds with limited hearing used Bekesy audiometry to track their pure-tone thresholds, speech detection thresholds (SDT), and most comfortable loudness (MCL) levels for speech. Test-retest reliability was high for each measure and a high correlation was found between thresholds at 250 Hz and speech detection. Comfortable loudness levels revealed a restricted dynamic range between SDT and MCL. Implications of the findings for clinical practice are discussed.—*Journal summary.*

10145. **Saffran, Eleanor M. & Marin, Oscar S.** (Baltimore City Hosp, MD) **Immediate memory for word lists and sentences in a patient with deficient auditory short-term memory.** *Brain & Language*, 1975(Oct), Vol 2(4), 420-433. Presents findings of 4 experiments with a patient who exhibited a specific deficit of auditory verbal short-term memory. In serial recall, the normal recency effect was absent with auditory but not visual lists. S's behavior in immediate memory tasks was in some ways more characteristic of delayed recall, suggesting that an intact long-term memory was responsible for the residual short-term performance. S also showed a remarkable ability to paraphrase sentences he could not repeat verbatim, a result which has implications for the role of auditory memory in language comprehension. (19 ref) *Journal abstract.*

10146. **Sakurai, Masayuki; Misaka, Yataro & Yokoyama, Toshito.** **[Two cases of laughing attack.]**

(Japn) *Kyushu Neuro-psychiatry*, 1975, Vol 21(2), 113-118.—Reports 2 cases of forced laughing in a 19-yr-old female and a 28-yr-old male. The female patient, who experienced laughing attacks without any impulse to laugh, showed unstable emotionality, a low IQ, and malfunction of the CNS (inferred from EEG examinations and the results of a hypophyseal test with SU-4855). The male patient developed laughing attacks about 3 mo after a head injury. In his attacks, a slight impulse to laugh sometimes occurred. Examinations of both EEG and visual field suggest that the base of the posterior portion of the thalamus had been damaged. These 2 cases indicate that the laughing attacks were caused by organic and chemical stimulation of the laughing center, presumably located in the posterior hypothalamus. (English summary)—S. Ashida.

10147. **Sato, Susumu; Dreifuss, Fritz E. & Penry, J. Kiffin.** (U Virginia, Medical School) **Photic sensitivity of children with absence seizures in slow wave sleep.** *Electroencephalography & Clinical Neurophysiology*, 1975(Nov), Vol 39(5), 479-489.—Studied photically sensitive spike-wave paroxysms during slow-wave sleep (SWS) in 4 10-15 yr old children (1 set of identical twins) with absence seizures. Sensitivity to stimuli at all frequencies (1-50 c/sec) and intensities was minimal during SWS (Stages 3 and 4), although photic driving could still be discerned. Trains of paired stimuli were effective in triggering polyspike responses during SWS at frequencies of 6-8 c/sec and at flash intervals of 50 msec. The morphology of the discharges was similar to that seen in spontaneous discharges in deep sleep. The discharges, however, were stimulus-bound, and there were no poststimulation spike-wave afterdischarges, which characterized wakefulness and REM sleep. Findings suggest that, in deep sleep, while the cortical response to photic stimulation via the specific pathway system remains intact, the cortex is functionally disconnected from those subcortical mechanisms essential for afterdischarge perpetuation. There was no difference among the 3 groups as to levels of lymphocyte stimulation or the presence of antibodies to HSV.—*P. R. Sweet.*

10161. Werman, David S. & Katz, Joel. (U North Carolina, Medical School, Chapel Hill) **Anorexia nervosa in a pair of identical twins.** *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 633-645.—Presents the case of identical female twins who simultaneously developed anorexia nervosa. It is postulated that the twins suffered severe, chronic traumata because of disturbed family relationships and were therefore unable to work through their twinship. They developed anorexia nervosa in a setting of fear and unconscious desire for pregnancy, and experienced significant gender identity problems. (17 ref)—*Journal summary*.

10162. Wewetzer, Karl-Hermann. (Gesamthochschule, Kassel, W Germany) **[Differentiating the organic psychosyndrome resulting from brain damage in childhood.]** (Germ) *Diagnostica*, 1975, Vol 21(4), 182-191.—Administered a battery of about 50 tests to 132 brain-damaged, 42 possibly brain-damaged, and 108 normal children. Corresponding factor structures are reported for the brain-damaged and normal samples. The most important factors were intelligence, lack of confidence, and disturbance in rhythm and language. Linear and quadratic discriminant function analyses were performed to differentiate subgroups of brain-damaged Ss and to differentiate these from normal Ss. It is concluded that tests of motor skills and quadratic discriminant function analysis are particularly useful in such differentiation.—*M. Morf*.

10163. Youngs, Joseph P. (Governor Baxter State School for the Deaf, Portland, ME) **Experiential deprivation: A response.** *American Annals of the Deaf*, 1975(Dec), Vol 120(6), 553-554.—Criticizes A. D. Evans's (see PA, Vol 55:Issue 5) study which identified experiential deprivation syndrome among deaf Ss in a state residential school which involved separation from peers, restricted communication, strict dating rules, and lack of freedom to leave campus. It is argued that Evans's study was conducted 5 yrs ago among a carefully selected population and that his findings could probably not be replicated in other schools or groups at the present time.

TREATMENT AND PREVENTION

10164. Anderson, Hilary. (California Inst of Asian Studies) **A study of the principles and methods of self-integration in integral yoga.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4649.

10165. Barnes, Susan V. (California School of Professional Psychology, San Francisco) **The use of sign language as a technique for language acquisition in autistic children: An applied model bridging verbal and nonverbal theoretical systems.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4651.

10166. Barrau-Berot, Colette. **[Psychology and surgery.]** (Fren) *Etudes Psychotherapeutiques*, 1975(Sep), No 21, 175-177. Gives an overview of the relationship of psychology to surgical activities and problems.—*F. Auld*

10167. Bebeau, Edward C. (U Colorado) **Convergent validation of treatment outcome.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3484-3485.

10168. Bonierbale-Julien, M.; Stenwaga, Mme. & Scotto, J. C. **[Sexology.]** (Fren) *Encéphale*, 1975, NS Vol 1(3), 245-247.—Discusses how physicians are confronted daily with increasing demands for help concerning sexual problems, openly verbalized as such or masked in functional symptomatology. The techniques of W. H. Masters and V. E. Johnson are recommended. For the psychiatrist, these techniques represent a new approach by means of medical team work and body language.—*K. J. Hartman*.

10169. Braen, Bernard B. & Forbush, Janet B. (Syracuse U, Clinical Psychology Training Program) **School-age parenthood: A national overview.** *Journal of School Health*, 1975(May), Vol 45(5), 256-262.—Draws on the published literature to describe the educational, health, and social risks of the US school-age (teenage) parent population, and the changes in attitudes, services, legislation, and policies which have occurred since 1962. Programs are concerned with pregnancy prevention and with the educational, economic, and occupational needs of teenage parents. Considerable progress has been made in developing comprehensive service networks for school-age parents and their infants, but it is difficult to assess the overall effectiveness of these efforts. (55 ref) —*J. D. Pauker*.

10170. Casabianca, Jamie. (Center for Independent Living, New York, NY) **The case of Mr. K.: Rehabilitation vs. institutionalization.** *New Outlook for the Blind*, 1975(Nov), Vol 69(9), 416-417.—The case of a 65-yr-old blind man who came to the Center for Independent Living from a state psychiatric hospital illustrates the problem of blind persons confined to mental institutions merely because they have not been taught the skills for living in a sighted world and because no one is concerned enough to get them out of hospitals and into rehabilitation programs. Rehabilitation also costs less than long-term hospitalization.

10171. Christensen, Donald E. (Portsmouth Psychiatric Ctr. VA) **Effects of combining methylphenidate and a classroom token system in modifying hyperactive behavior.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 266-276.—Studied the combined effects of methylphenidate (0.3 mg/kg/day) and a token reinforcement program in controlling the classroom behavior of 16 hyperactive, institutionalized retarded 9-15 yr olds. A within-S, placebo-controlled, double-blind design was employed. Results from 13 Ss indicate that the behavior modification procedures in the presence of placebo medication produced significant increases in work-oriented and decreased decreases in disruptive behaviors. Few effects on the addition of active medication to the treatment program were found on any of the dependent measures (seat activity, teachers' ratings, and academic performance). Findings suggest that behavior modification is a viable alternative to drug therapy for hyperactivity in retarded persons. (36 ref) —*Journal abstract*.

10172. Danée, Marie L. **Stop running.** New York, NY: Vantage Press, 1975. 185 p. \$4.95.—Presents a personal account of a woman's recovery from a nervous

breakdown resulting from her inability to handle conflicts within herself. Her experiences while receiving psychiatric therapy and as a patient in a state mental hospital are described.

10173. Davis, John M. (Illinois State Psychiatric Inst, Chicago) **Overview: Maintenance therapy in psychiatry: I. Schizophrenia.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1237-1245.—Notes that hospital psychiatry has evolved from long-term "treatment" programs that were primarily custodial to the successful pharmacological treatment of acute psychotic episodes. Unfortunately, many patients still return to the hospital with relapses. This so-called revolving door syndrome draws attention to the critical importance of preventing as well as treating acute episodes. A review is made of (a) the clinical literature on prophylactic treatment of schizophrenia with maintenance antipsychotic drugs and (b) the literature on prophylactic treatment of affective disorders with lithium and tricyclics. It is suggested that these drugs provide the potential for truly preventive psychiatry. (62 ref)—*Journal abstract*.

10174. François, G. & Moisan, D. (Hôpital de la Timone, Marseilles, France) **[General anesthesia for electroconvulsive therapy.]** (*Fren Encephale*, 1975, NS Vol 1(3), 219-221.—Warns of medical risks connected with administering electroshock to an anesthetized patient. Inhalation of gastric juices, and recess in ventilation are well known; hyperkalemia and extended curarization after injection of succinylcholine may be present but obscured by other symptoms.—K. J. Hartman.

10175. Gomez, Joan & Dally, Peter. (Westminster Hosp, London, England) **Intravenous tranquillization with ECT.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 604-608.—40 depressed in-patients for whom ECT had been prescribed were rated before treatment on depression and anxiety scales. Side effects, postoperative agitation, and retrograde memory impairment were assessed in each patient after each of several treatments. Results were compared when no tranquilizer was given and when either diazepam or haloperidol was administered iv immediately before the anesthetic. It was found that when ECT was given without tranquilization, the incidence and severity of postoperative agitation and of side effects were significantly greater in those patients with a high level of anxiety before treatment. Both diazepam and haloperidol were found to be effective in subduing agitation and side effects in anxious, depressed patients, but with diazepam recovery time was longer.—*Journal abstract*.

10176. Gomez, Joan. (Westminster Hosp, London, England) **Subjective side-effects of ECT.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 609-611.—The incidence of side effects present 24 hrs after ECT was studied in 96 patients who received a total of 500 treatments in a consecutive series. None of the side effects occurred frequently. Headache was experienced after 2.6% and subjective memory impairment after 3% of treatments. None of the unwanted effects held any serious physical threat. The aspect of ECT most disliked by Ss and mentioned by 16% of them, was the fear of permanent memory upset.—*Journal abstract*.

10177. Grant, Richard D. (U Texas, Austin) **Validation of an automated test anxiety reduction program.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4662.

10178. Grauke, Clyde E. (Texas Tech U) **The relationship between conditioned alpha rhythm and psychological variables.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4662-4663.

10179. Group for the Advancement of Psychiatry, Committee on Research. (New York, NY) **Pharmacotherapy and psychotherapy: Paradoxes, problems and progress.** *GAP Report*, 1975(Mar), Vol 9(93), 431 p.—Presents an integration of the theory, research, and practice of pharmacotherapy and psychotherapy. Problems in synthesizing the 2 perspectives are discussed in terms of therapist attitude and treatment outcome. Literature describing treatment of neuroses, schizophrenia, and depression by both methods is reviewed. Methodological problems in drug and psychotherapy research are discussed, focusing on the new problems generated by attempts to utilize both approaches in research. It is concluded that there is no systematic evidence to indicate that (appropriate) psychotropic agents interfere with the psychotherapy of any of these illnesses. The evidence shows that drugs used in conjunction with psychotherapy facilitate the latter. It is suggested that medical schools and residency programs incorporate training in the use of psychopharmacology. (259 ref)—R. S. Albin.

10180. Hinrichsen, James J. & Katahn, Martin. (Vanderbilt U) **Recent trends and new developments in the treatment of homosexuality.** *Current Theory, Research & Practice*, 1975(Spr), Vol 12(1), 83-92.—Reviews recent developments in therapeutic approaches to homosexuality and suggests directions for future research and treatment. Case reports, clinical studies, and research articles on group and individual therapy for homosexuals are summarized. Psychoanalytic analysis, hypnosis, brain surgery, aversive conditioning, covert sensitization, and combined treatments are covered. It is concluded that results to date do not permit precise answers to the question of appropriate and specific treatments for distinguishable kinds of patients. An important treatment factor is whether behavioral change is indicated and desired by both patient and therapist. (2 p ref)—C. McCreary.

10181. Hipplius, H. **[The role of electroshock in the era of psychopharmacology.]** (*Fren Encephale*, 1975, NS Vol 1(3), 195-201.—Reports reduction in electroshock therapy procedures (EST) at Munich Psychiatric Hospital from 2,500 in 1952 to 200 in 1958. The reduction is due to increasing use of psychopharmacology. EST is recommended, however, for relief of depression resistant to medical therapy.—K. J. Hartman.

10182. Johnson, Stephen J. (U Southern California) **Effects of yoga therapy on conflict resolution, self concept, and emotional adjustment.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6385.

10183. Karon, Bertram P. & VandenBoa, Gary R. (Michigan State U) **Medication and or psychotherapy with schizophrenics. Which part of the elephant have you touched?** *International Mental Health Research Newsletter*, 1975(Fal), Vol 17(3), 1, 8-13.—Compares

May's (1968) and the authors' (1972) studies on the relative effectiveness of psychotherapy, medication, and combined medication/psychotherapy as treatments for schizophrenia; the former found medication most effective, the latter psychoanalytic psychotherapy. Responding to criticism by May and Tuma (1970), the discussion details differences between the studies; therapists' characteristics, treatment continuity, number of cases, patient population and selection, randomization, statistical procedures, untestable patients, evaluation procedure, and drug dosage. It is concluded (a) that each study provided different conditions which yielded meaningfully different results consistent with each other and with clinical practice, and (b) that their own study reaffirmed the prognostic centrality of the thought disorder in schizophrenia. (15 ref)—C. A. Heikkinen.

10184. Loewendahl, Evelyn. **Therapeutic approaches to adolescence.** *American Corrective Therapy Journal*, 1975(Sep-Oct), Vol 29(5), 169-172.—Describes a means of approaching adolescents through the self-esteem factor. By strengthening of the ego through physical improvement, it is suggested that a youth may gain feelings of adequacy to help him on other levels.—D. R. Marino.

10185. Malony, H. Newton. (Fuller Theological Seminary, Graduate School of Psychology, Pasadena, CA) **The demise and rebirth of the chaplaincy.** *Journal of Pastoral Care*, 1975(Jun), Vol 29(2), 129-134.—Discusses the chaplain's problem of identity on a mental health team. His problem is often seen as inadequacy by his fellows. It is suggested that the chaplain should consider himself as equal member of the health team, should not allow other issues to determine his priorities, and should not become subdued by the system.—B. Smith.

10186. Miller, Barbara. (McGill U, Toronto, Canada) **The effects of bilateral and unilateral electroconvulsive therapy (ECT) on non-verbal memory in depressed psychiatric patients.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4671-4672.

10187. Morić-Petrović, Slavka. [Place of psychiatry in Society.] (Srce) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 9-20.—Presents the introductory lecture to the Second National Conference for Social Psychiatry held in Belgrade, June 1973. The general frame of reference of Yugoslav social psychiatry is given. (English summary)—P. Vrtunski.

10188. Parker, Duane. (Topeka State Hosp. Chaplaincy Services, KS) **Pastoral resources in the treatment of a mentally ill person: A dialogue about patient's rights and a chaplain's responsibilities.** *Journal of Pastoral Care*, 1975(Jun), Vol 29(2), 111-118. Presents a case study illustrating how a chaplain trainee is supervised in learning to work with a mentally ill patient, particularly with respect to the religious issues involved. Comments by 3 discussants follow.—B. Smith.

10189. Pederson, Linda L.; Scrimgeour, William G. & Lefcoe, Neville M. (U Western Ontario, London, Canada) **Comparison of hypnosis plus counseling, counseling alone, and hypnosis alone in a community service smoking withdrawal program.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 920.—3- and 10-mo follow-up data on 48 volunteers in a

smoking withdrawal program indicate that neither hypnosis alone nor group contact alone yielded satisfactory results; however, the combined use of these procedures yielded a fairly high success rate (56.25 and 50% for the 3- and 10-mo assessments, respectively).

10190. Peršić, Nikola. [The development of sociotherapy in our country (Yugoslavia).] (Srce) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 163-173.

10191. Pogády, J. & Breier, S. (Výskumný ústav humánnej bioklimatológie, Bratislava, Czechoslovakia) [Place of psychopathology in the system of psychiatric disciplines.] (Slovak) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 383-388.—Discusses the concept of "psychopathology" and concludes that, although psychopathology is the common focus of all psychiatric disciplines and, therefore, could be defined as the study-object of psychiatry as systematic science, there is no general agreement about its exact meaning. Various diverging theoretical, semantic, and terminological approaches found in French, German, and Russian literature are presented. The existence of a systematic monograph on the problem of psychopathology in the Anglo-Saxon psychiatric literature could not be determined, and it is suggested that a united and generally accepted theory of psychopathology would improve the scientific status of psychiatry.—V. Fischmann.

10192. Škoda, C. (Výzkumný ústav psychiatrický, Prague, Czechoslovakia) [Comparison of the validity of the diagnostic assessment based on information from patient and from relatives.] (Czech) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 344-350.—Used the Czech version of the Current and Past Psychopathology Scales in the diagnostic study of 31 psychiatric cases. A computer program was used to separately process and diagnostically classify information obtained from each patient, his relatives, and a critical combination of both sources. The 3 kinds of computerized diagnostic information were compared with the initial and final diagnostic assessment made by the psychiatrist. Results show that within the framework of a standardized interview information obtained from informants who knew the patient well were more valid than information obtained by the same method from the patient himself. (Russian & English summaries) (22 ref)—V. Fischmann.

10195. Slaney, Robert B. (Ohio State U) **The effects of pre-counseling training on the in-counseling behavior of clients.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4058.

10196. Stojiljković, Srdoljub. [A sociotherapeutic approach in social psychiatry.] (Srce) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 21-27. Describes the principal objectives of sociotherapy, its general significance for social psychiatry, and the methods used

to rehabilitate and resocialize mental patients. (English summary)—*P. Vrtunski*.

10197. Vencovský, E. (Karlova U, Psychiatrická klinika lékařské fakulty, Plzeň, Czechoslovakia) [Changes of pharmacotherapy in the course of psychotherapy of mental disorders.] (Czec) *Československá Psychiatrie*, 1974(Nov), Vol 70(6), 340-343.—Discusses the present lack of understanding of the pathogenesis of mental disorders which, with the possible exception of simple reactive (situational) disturbances, are determined by a complex combination of endogenous and exogenous factors. Present psychiatry is limited to 4 main therapeutic modalities: pharmacotherapy, psychotherapy, sociotherapy, and shock therapy. The first 2 are used with psychotics. Psychotherapy plus minor tranquilizers are the primary therapeutic approach in psychoneuroses. Whenever possible, patients should not be given more than 1 kind of drug at the same time. Present clinical experience shows that the combined pharmaco-psychotherapy and pharmaco-sociotherapy are the most effective treatments. (Russian summary)—*English summary*.

Psychotherapy & Psychotherapeutic Counseling

10200. Beljaew, W. N. (Medical Inst, Kuibyshev, USSR) [Diagnosis and therapy of functional cardiac disorders in neurasthenic patients at sanatoriums.] (Germ) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(Dec), Vol 26(12), 738-746.—Reports on the successful treatment of 120 neurasthenic cases with functional heart disorders in a sanatorium, supplementing the usual sanatorium regime with psychotherapy adapted to the individual case. Relations between the different forms of neurosis and neurotic cardiac symptoms are shown in a schema in an effort to solve the problem of the systematic representation of functional cardiac disorders and thus apply psychotherapy more effectively. (Russian summary) (43 ref)—*I. Czechlik*.

10201. Bent, Russell J.; Putnam, David G.; Kiesler, Donald J. & Nowicki, Stephen. (Georgia Mental Health Inst, Atlanta) *Correlates of successful and unsuccessful psychotherapy*. *Journal of Consulting & Clinical Psychology*, 1976(1eb), Vol 44(1), 149.—Determined whether a positive perception of the therapist is related to successful therapy outcome in 93 outpatients at a large mental health facility. Ss who were very satisfied with therapy, compared with those who were not very satisfied, described their therapists as warmer, more likable, more active, and more involved and felt that therapy had a more noticeable effect on their behavior.

10202. Blackwood, Grady L.; Strupp, Hans H. & Bradley, Laurence A. (Vanderbilt U) Effects of prognostic information on global ratings of psychotherapy outcome. *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 810-815.—30 graduate students in clinical psychology (raters) viewed a videotape recording

of an interview with a patient after having read 1 of 3 types of posttherapy information about the patient. One group of raters was presented information associated with a good prognosis, one group was presented information associated with a poor prognosis, and the last group received neutral information about the patient. Half of the members of each group were told that the interview was made at the termination of therapy, the other half were told that it was a 1-yr follow-up interview. All raters then completed scales regarding patient's level of adjustment, psychic distress, amount of change, and success of patient's therapy. Only ratings of pre- to posttherapy patient change varied as a function of prognostic information. Results suggest that although poor prognosis patients are perceived as exhibiting more change than good prognosis patients, only final level of functioning determines global judgments of psychotherapy outcome.—*Journal abstract*.

10203. Calnek, Maynard. "I'll always get what I want." The fantasy world of an adolescent with a narcissistic character disturbance. *Reiss-Davis Clinic Bulletin*, 1975(Fal), Vol 12(2), 123-133.—Reports the case history and treatment of an adolescent boy who evidenced narcissistic behavior more commonly described in adults. The phases of therapy dealing with various aspects of the patient's character disturbance are described.—*G. R. Alley*.

10204. Cramer, B. (Ctr Universitaire de Psychopathologie du Développement, Genève, Switzerland) [Brief therapy interventions with parents and children.] (Fren) *Psychiatrie de l'Enfant*, 1974, Vol 17(1), 53-118.—Examines the history of attempts to shorten psychotherapy and psychoanalysis and discusses the reasons why briefer therapeutic methods are needed, and their particular usefulness in dealing with mother-child problems. A case of school phobia in a 10-yr-old girl, treated in 6 sessions, is presented in detail to illustrate the brief-therapy method. Theoretical and technical aspects of this type of intervention are discussed, including its limitations, indications for its use, its format, and problems of transference and interpretation. (56 ref)—*D. F. Herran*.

10205. Davidson, Claire D. Psychotherapy with mentally handicapped children in a day school. *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 13-21.—Describes individual psychotherapy with 3 mentally handicapped boys attending a special school for English-speaking retarded children living in Paris. It is maintained that the mentally retarded child can use play therapy to unblock troublesome feelings and to bring about more adequate behavioral responses just as the neurotic child does.—*C. McCreary*.

10206. DeFazio, V. J. & Klenbart, I. (Queensborough Community Coll) A note on the dynamics of psychotherapy during marital dissolution. *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 101-104.

Discusses psychotherapy during marital dissolution as it is frequently encountered in private practice and clinics. This is considered an opportune time to focus on character traits and issues of individuation, separation and dependencies. Stages of dissolution are described: shock and confusion, depression and rage, and exhilaration vs anxiety. How the stages affect therapy and how

the therapist can deal with them is discussed and illustrated with case material.—C. McCreary.

10207. Doyle, Marina C. **Rabbit: Therapeutic prescription.** *Perspectives in Psychiatric Care*, 1975(Apr-Jun), Vol 13(2), 79-82.—Studied 6 adult male psychiatric inpatients to determine whether (a) nonpunitive pets affect patients with profound communication difficulties and (b) relating to an animal occurs more easily than to another human. A rabbit was used as the study animal. Ss were administered both a pre- and post-study questionnaire. Results indicate the following: (a) the presence of an animal on an inpatient psychiatric unit had considerable value; (b) less regressed patients focused on the rabbit as a common joy, irritation, and point of departure for other interactions; (c) more regressed patients appeared to incorporate its presence into their personalized reality and thus related to it at a primary level and used it as a bridge to external reality and contact with the milieu.—M. E. Pounsel.

10208. Dufour, Roger. [Appearance of the word during therapy: Sensitization to affective-structural listening.] (Fren) *Etudes Psychothérapeutiques*, 1975(Sep), No 21, 163-171.—The therapist should be a sensitive listener, alert to the nuances of words, as the patient, at first haltingly, translates his experiences into verbalizations.—F. Auld.

10209. Edgell, Steven L. (U Minnesota) **The effectiveness of different confrontation levels in changing a client's attribution of the cause of his problem.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3493.

10210. Edwards, David G. **A therapist's existential survival kit.** *Clinical Social Work Journal*, 1975(Win), Vol 3(4), 309-315.—The existential view of human beings is narrated briefly. The mind is described as "I" directed, and the manner in which "I" direction can be developed is discussed. The existential approach to therapy is said to integrate both cognitive and noncognitive functioning. (25 ref)—S. R. Stein.

10211. Farnsworth, Kirk E. (U New Hampshire) **Despair that restores.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 44-47.—Proposes some theories and concepts useful for understanding the experience of despair and suggests approaches the therapist can use to help his clients overcome despair through an existential confrontation of meaning in life. Prayer is examined as an adjunct in this form of therapy.—C. McCreary.

10212. Feltoon, Harold D. (Texas Tech U) **Measuring transference expectations in a university counseling center.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4660.

10213. Force, Ronald C.; Hoskins, Laura & Craig, Margaret. (St Francis Homes for Boys & Girls, Salina, KS) **What entering, within-program variables relate to postrehabilitation success?** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 15 16.

10214. Fordham, Michael. **On interpretation.** *Analytische Psychologie*, 1975, Vol 6(3), 277-293. Discusses the various kinds of interpretation used in psychoanalysis. Interpretations are examined in terms of their components and nature, the establishment of their validity, and their sources in the unconscious of the

analyst, who then uses them to further the patient's individuation.—S. D. Babcock.

10215. Goeppert, S. & Goeppert, H. C. (U Freiburg, W Germany) [Remarks on the significance of class-specific language behavior in psychoanalysis and psychotherapies.] (Germ) *Nervenarzt*, 1975(Mar), Vol 46(3), 136-142.

10216. Gossner, Karl J. (Carrier Clinic, Belle Meade, NJ) **The bereaved relatives.** *Dynamische Psychiatrie*, 1975, Vol 8(5), 308-317.—Denial and disbelief are the initial reactions to death, but the process of bereavement, grief, and mourning plays a restitutive part in overcoming the loss. Inability to deal with death may bring out pathological denial, identification, introjection, compulsion, and persistent thoughts of self-destruction. Therapy can guide the patient from a passive, dependent, childlike state to greater maturity, with growth in ego function.—H. Bruml.

10217. Graber, Gustav H. [The problem of death in a case of prenatal psychoanalytic treatment: The concept of the dying patient.] (Germ) *Dynamische Psychiatrie*, 1975, Vol 8(5), 290-295.—Discusses the theoretical relationship between prenatal existence, birth trauma, and death in a dying patient and describes the working through of the pathological dynamics by means of the prenatal psychoanalytic treatment developed by the author.—H. Bruml.

10218. Hardin, Susan I. (Ohio State U) **Genuineness and gender: Effects on perceptions of counselor behavior.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4041.

10221. Heinicke, Christoph M. & Strassmann, Larry H. (U California, Los Angeles) **Toward more effective research on child psychotherapy.** *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 561-588.—Argues that the conclusion of previous research that child psychotherapy is ineffective is based on inadequately proposed research questions. Different questions and variables of relevance to the evaluation of child psychotherapy are proposed. These include the influence of the initial developmental status, the nature of parental impact, frequency and duration of sessions, age of child, and therapist variation. It is suggested that considerations of such internal and external growth-promoting forces relevant to the child become important in the therapeutic process. Further suggestions are offered for the improvement of research on child psychotherapy. (60 ref)—R. M. Cohen.

10222. Hinterkopf, Elfie & Brunswick, Leslie K. (Manteno State Hosp, IL) **Teaching therapeutic skills to mental patients.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 8-12. Discusses a project in which 10 chronic schizophrenics were trained to use client-centered, experiential counseling skills with each other. The methodology, special problems encountered,

and suggestions for dealing with these problems are described in detail. The project was generally successful in that patients learned the skills, and positive side effects were observed in patients. These included more verbalization, increased interaction between patients, the development of problem-solving abilities, and a higher sense of self-esteem. Teaching these skills offers an economical way of providing rehabilitative services to mental patients.—C. McCreary.

10223. Hoover, John E. (Ohio U) **Client-expressed preferences for therapist personality characteristics as a function of client-expressed urgency for therapy.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4630.

10225. Irwin, Robert L. (Washington State U) **The relationship of counselor empathy and genuineness to client self-experiencing with two types of clients at a university counseling center.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4045.

10226. Katzenstein, Alfred; Kriegel, Elfriede & Gaefke, Irmgard. (Akademie der Wissenschaften, Zentralinstitut für Herz- und Kreislauf-Regulationsforschung, Berlin, E Germany) **[Evaluation of results of complex psychotherapy in patients with essential hypertension.]** (Germ.) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(Dec), Vol 26(12), 732-737. —Evaluation of observations and statistical data on 500 juvenile essential hypertensives of the 1st degree of severity revealed characteristic maladaptive behavior patterns. In order to change these conflict-intensifying patterns, a complex psychotherapy method was developed. Results show a significant drop in the blood pressure of 46 Ss not only over a short period but also in 1- and 2-yr follow-up studies. Comparison with 5 other groups of hypertensives treated with other methods confirmed the effectiveness of the complex psychotherapy. (Russian summary)—English summary.

10227. Kirkpatrick, J. Stephen. (Planned Parenthood Ctr, Tucson, AZ) **Guidelines for counseling young people with sexual concerns.** *Personnel & Guidance Journal*, 1975(Nov), Vol 54(3), 144-148.—It is felt that counselors should be alert to both the expressed and the unexpressed sexual concerns of their clients. To be effective, however, the counselor must deal with his own sexuality before attempting to help others. G. S. Speer.

10228. Kogan, Gerald. (U California, Berkeley) **The history, philosophy and practice of Gestalt therapy: Theory of human nature and conduct in Frederick Perls' psychology.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3501.

10229. Lacroix, Marie-Thérèse. [Clinical document: **History of a symbol in guided waking dreams and in nocturnal dreams.**] (Fren.) *Etudes Psychothérapeutiques*, 1975(Sep), No 21, 191-197. —Traces a patient's use of the word "tree" throughout a course of directed-reverie therapy. It is concluded that the nighttime dreams were essential to the therapeutic process, not merely incidental.—F. Auld.

10230. Lickorish, John R. (Inst of Family Psychiatry, Ipswich, England) **The therapeutic use of literature.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 105-109.—Discusses the use of literature in psychotherapy, including the limitations on such use. Its primary value is to the therapist, whose reading of novels and plays can increase his empathy with his clients, enlarge vicarious experience, offer a guide in the search for values, and foster more adequate communication with clients. While the client himself may not obtain direct benefit from reading literature, his own production of written material may offer insights into his feelings and thoughts for use by the therapist. (24 ref)—C. McCreary.

10231. Lockhart, Russell A. (Camarillo State Hosp, CA) **Mary's dog is an ear mother: Listening to the voices of psychosis.** *Psychological Perspectives*, 1975(Fal), Vol 6(2), 144-160.—Contends that "reality-oriented" psychotherapy, which devalues the patient's psychotic experience, limits patient and therapist alike. By contrast, Jungian therapy with a 19-yr-old male, in which the therapist successfully "deciphered the unknown language" of the voices heard by the patient, is described in detail.

10232. Lynn, David B. (U California, Davis) **How to never grow up and never stop growing: A way of self-therapy (a personal account).** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 13.

10233. Mac, Roddy F. (U Wisconsin, Madison) **Client (and therapist) prognostic expectancies: An assessment of validity and an attempted manipulation.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6216-6217.

10234. MacDonald, Marian L. (State U New York, Stony Brook) **Teaching assertion: A paradigm for therapeutic intervention.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 60-67. —Proposes assertion training as a useful model for all methods of clinical intervention, since assertion training involves (a) consideration of the development of the problem, (b) exploration of what is maintaining it, and (c) discussion of procedures for change. The tactics used depend on whether the problem involves skill deficits, inadequate stimulus discrimination, or fear of consequences. (19 ref)—C. McCreary.

10235. Mahrer, Alvin R. (U Waterloo, Canada) **Therapeutic outcome as a function of goodness of fit on an internal-external dimension of interaction.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 22-27. —Presents a theoretical discussion of the relation between therapeutic outcome and the goodness of fit between the patient's axis of interaction and the axis adopted by the therapist. Two modes are described: internal interaction is the process whereby the patient is dealing with internal events (bodily sensations and feelings), while in external interaction the predominant involvement is with the external world. The thesis is suggested that productive change in therapy depends on the consistency of the therapist's and patient's modes of interaction rather than on the actual mode of interaction in either patient or therapist. (41 ref)—C. McCreary.

10236. Match, Joel J. (U Illinois) **Modification of the illusory correlation phenomenon in clinical judgment.**

Dissertation Abstracts International, 1974(Mar), Vol 34(9-B), 4669.

10239. McKinney, Fred. (U Missouri) Explorations in bibliotherapy: Personal involvement in short stories and cases. *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 110-117.—Considers the effects on the individual of reading fiction and reports results of previous studies of such effects, noting that only a small percentage of the educated population seems to experience serious involvement in fiction. To study individual reactions, students in upper-class psychology courses were asked to rate 57 contemporary short stories, selected for their depiction of psychological states, on a 10-point scale that indicate the student's interest or involvement in each story. Ss also described their reactions to the stories; i.e., how the stories had helped them understand life, their own problems, or other people. Results of these and supplementary tests are presented in detail and their implications for bibliotherapy are discussed. (21 ref)—C. McCreary.

10240. Medi, Giancarlo; Prudenziato, Piergiorgio & Bitti, Pio E. (U Degli Studi Bologna, Italy) [A preliminary contribution to the study of nonverbal behavior in psychotherapy.] (Ital) *Rivista di Psichiatria*, 1975(May-Jun), Vol 10(3), 239-249.—Observed 8 adult patients in short-term psychotherapy, noting gestures, vocal tone, orientation, and transitory action. It is concluded that nonverbal behavior is a promising data source. (15 ref)—N. De Palma.

10241. Meltzer, James D. (New York U) The suitable patient: Talking, thinking and therapy. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4052-4053.

10242. Mendelsohn, J. [Residential and psychotherapeutic treatment of a boy showing aggressive behavior disorder.] (Germ) *Analytische Psychologie*, 1975, Vol 6(3), 368-385.—A 7½ year old boy from a kibbutz referred for aggressive behavior disorders was diagnosed as a borderline case with traits of milieu damage. His mother was overprotective and frustrating which endangered the boy's positive developmental possibilities. Residential treatment was undertaken. During psychotherapy a wealth of fantasy production containing theriomorphic symbols arose. This material could be understood in the light of the boy's fixation on an unconscious instinct level. The incestuous, archetypal mother-tie coincided with low ego strength, which accounted for the boy's inability to control his frequent emotional outbursts. In residence and during psychotherapy, remarkable improvement took place, but the family insisted on premature return of the boy and the improvement did not withstand the renewed environmental stress and psychotherapy was resumed.—S. D. Bahcock.

10243. Miller, Barbara V. (U Illinois) Catharsis and reinforcement in young children's aggression: A test of

the meaning and effects of nondirective statements. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6217-6218.

10244. Nadal, Jean. [Regression and the passing of thing into word.] (Fren) *Etudes Psychothérapeutiques*, 1975(Sep), No 21, 153-161.—Proposes that directed-reverie therapy brings preverbal, unconscious thoughts, and verbal representations into relation with each other.—F. Auld.

10245. Nietzel, Michael T. (U Illinois) The effects of assessment and treatment mediated demand characteristics in a psychotherapy outcome analogue study. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6219.

10246. Okonogi, Keigo. (Keio U, Medical School, Tokyo, Japan) The Ajase Complex (by Kosawa): The theory of psychotherapy proposed by a Japanese psychoanalytic pioneer. *Dynamische Psychiatrie*, 1975, Vol 8(5), 296-307.—Describes the "Ajase complex," the counterpart in Japanese culture of the Oedipus complex in the Western world. It was set forth by H. Kosawa (1897-1968) in his paper, "Two Different Kinds of Guilt Feelings," and presented to Freud by Kosawa in Vienna in 1932. Prince Ajasa wanted to kill his mother when he lost his feeling of oneness with her and his narcissistic omnipotence was damaged. Realizing, however, that the evil mother was also the good mother who had nursed him through illness (caused by his guilt feelings), he developed the capacity to accept his ambivalence towards her and thus re-established a healthy ego. In Kasawa's psychotherapy, the patient experiences, through togetherness with the therapist, a feeling of fusion with the mother and becomes able to develop a basic trust in the world and other people.—H. Bruml.

10247. Orenstein, Louis J. (Kent State U) Pre-therapy role preparation and attraction induction: An experimental analogue. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3505.

10248. Pollak, Marcia. (New York U) The function of perceptual concreteness, affect, and experiencing in psychoanalysis. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4055.

10249. Pope, Kenneth S.; Geller, Jesse D. & Wilkinson, Leland. (Yale U) Fee assessment and outpatient psychotherapy. *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 835-841.—To test the widely held belief that fee assessment policy affects the psychotherapeutic process, data were gathered from the records of 434 clients who had received individual outpatient psychotherapy at a mental health center in 1972. The 3 predictor variables were fee (no payment, welfare, insurance, scaled payment, and full payment), diagnosis (psychosis, neurosis, personality disorder, transient situational disturbance, and other), and socioeconomic status (5 levels). A least-squares multivariate analysis of variance found only diagnosis to be significantly related to the outcome, number of appointments, and attendance of individual outpatient psychotherapy. Failure to find significant effects of fee assessment categories on therapeutic process suggests the invalidity of therapeutic purposes as a rationale to charge fees for psychotherapy. (24 ref)—*Journal abstract.*

10251. Robison, Philip D. (Ohio U) The effects of level of therapist self-disclosure on high and low disclosing subject's perception of the therapist. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6223.

10252. Royce, W. Stephen & Weiss, Robert L. (VA Hosp, Psychology Service, San Diego, CA) Behavioral cues in the judgment of marital satisfaction: A linear regression analysis. *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 816-824.—40 undergraduate judges rated the level of marital satisfaction of 24 couples shown on videotape and then listed the behavioral cues used in making their judgments. The stimulus tapes were problem-solving interactions of both distressed and nondistressed couples. The tapes were scored for the actual occurrence of these cues, and multiple regression analyses were used to construct a model of the judges' cue usage and an actuarial prediction model using these same cues. Results indicate that (a) untrained judges were able to make discriminations of marital satisfaction-distress with significant but low validity; (b) judges' ratings were correlated with couples' overall rates of aversive but not of supportive behavior; (c) judges were able to specify useful behavioral cues, the most valid of which were compromise and attention; (d) the actuarial prediction model was more valid than the judges themselves. The utility for behavioral research of defining interpersonal behavior in terms of response-consequence units is discussed. (26 ref)—*Journal abstract*.

10253. Rubin, Judith A. (Pittsburgh Child Guidance Ctr, PA) Through art to affect: Blind children express their feelings. *New Outlook for the Blind*, 1975(Nov), Vol 69(9), 385-391. Describes an art program with multiply handicapped, visually impaired children. The program enabled them to let their feelings go, to move freely and rhythmically, and to experience the pleasure of controlling and creating with materials they could successfully use. They could also communicate important feelings, including those that related to their blindness, and especially the anger which was hard for them to express directly. They were able to be active rather than passive, to master not only the tools and materials, but also some of the unique stresses of their lives. Several reasons for the program's success are discussed: The children were free to choose materials and themes, allowing vital issues to emerge for each one; the unstructured media permitted many possibilities; and the symbolic nature of art facilitated sufficient disguise for psychic safety. The supportive structure provided ranged from physical containers for messy media to human containers for messy feelings. Indeed, the nonjudgmental acceptance of all thoughts, fantasies and productions (artistic and verbal), was perhaps the most essential condition for the expression of difficult, strong, and frightening feelings.—*Journal summary*.

10254. Saccuzzo, Dennis P. (Kent State U) Backward masking as a measure of attention in schizophrenia.

Dissertation Abstracts International, 1974(Jan), Vol 34(7-B), 3508.

10255. Sanville, Jean. (Los Angeles Inst for Psychoanalytic Psychology, CA) Therapists in competition and cooperation with exorcists: The spirit world clinically revisited. *Clinical Social Work Journal*, 1975(Win), Vol 3(4), 286-297.—Presents clinical vignettes depicting the occurrence of primitive, spirit manifestations in selected patients' lives. The meaning of these spirits for the patients and for society is discussed.—S. R. Stein.

10256. Schowalter, John E. & Pruett, Kyle. (Yale U, Child Study Ctr) The supervision process for individual child psychotherapy. *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 708-718.—15 child psychiatrists out of training and 8 child psychiatrists in training were administered interview surveys relevant to therapy supervision. Results indicate that an air of open and mutual respect in which the supervisor shares his own style of supervision were most highly valued by respondents. Differences between supervision of child and adult therapy are also discussed. (17 ref)—R. M. Cohen.

10257. Schulz, Clarence G. (Sheppard & Enoch Pratt Hosp, Baltimore, MD) An individualized psychotherapeutic approach with the schizophrenic patient. *Schizophrenia Bulletin*, 1975(Sum), No 13, 46-49.—Describes a psychotherapeutic treatment program for acute and chronic schizophrenic conditions. The program places emphasis on trying to fit the broad psychotherapeutic treatment effort to the particular needs of each patient. It is suggested that clinical signs and symptoms (e.g., projection, impulsivity, and gross identification with others) represent early primitive aspects of human personality. The therapist should, therefore, look to infancy and early childhood developmental concepts to understand these phenomena. Other symptoms of schizophrenia and specific techniques in the psychotherapeutic treatment of psychoses are examined. (18 ref)—M. E. Pounsel.

10258. Schwabe, Christoph. (Karl-Marx-U, Abteilung für Psychotherapie und Neurosenforschung des Bereichs Medizin, Leipzig, E Germany) [Music therapy—therapeutic music pedagogy—teaching of music: An attempt at definition.] (German) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(Dec), Vol 26(12), 705-713.—Distinguishes the terms music therapy, therapeutic music pedagogy, and teaching of music. Music therapy is essentially a method for psychotherapy, as 3 examples illustrate. (Russian & English summaries) (18 ref)—7 Czechlik.

10259. Silvestri, Richard J. (Kent State U) The treatment of emotionally disturbed retardates by implosive therapy. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4676-4677.

10261. Smith, John Q. The life and death of a schizophrenic. *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 2-7.—Describes a therapeutic relationship with a schizophrenic, focusing on the essential elements that made the therapy a

positive experience: the provision of friendship, the counteracting of fears of homosexuality, and the interpenetration of the self-punishing nature of his symptoms. The therapist's own reactions as he saw his patient struggle with death from cancer are described and analyzed.—C. McCreary.

10262. Strain, Phillip. (American U) **Increasing social play of severely retarded preschoolers with sociodramatic activities.** *Mental Retardation*, 1975(Dec), Vol 13(6), 7-9.—Conducted a study to determine whether sociodramatic activities would function to increase the social play of severely retarded preschool children during a free-play period. Ss were 8 severely retarded 48-52 mo olds with a mean IQ of 37. Social play was observed across baseline and intervention (sociodramatic play provided) conditions in an ABAB design. Results suggest that the opportunity to engage in sociodramatic activities and increased social play are functionally related.—*Journal abstract*.

10263. Swanson, Ardis R. **Communicating with depressed persons.** *Perspectives in Psychiatric Care*, 1975(Apr-Jun), Vol 13(2), 63-67.—Argues that therapeutic communication with depressed persons requires both a theoretical and practical foundation. The dynamics of verbal messages and problematic verbal and nonverbal messages are discussed. The dynamics of depression and the dynamics of communication in the treatment of depression are also examined.—M. L. Hogan.

10264. Swift, Wayne S. (U Texas, Austin) **Student preferences for therapist age, sex, and behavior as a function of a simulated problem.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4678-4679.

10265. Taylor, Gilda R. (Temple U) **The effect of counseling on insulin-dependent adolescents.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4030.

10266. Toomin, Marjorie K. & Toomin, Hershel. (Biofeedback Research Inst, Los Angeles, CA) **GSR biofeedback in psychotherapy: Some clinical observations.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 33-38.—Reports on the use of GSR feedback as an aid in dynamic psychotherapy. Changes in skin conductance give immediate feedback to both client and therapist regarding emotional responsivity to internal and external stimuli. Case reports are presented that portray various reactivity patterns (over-, under-, and variable-reactors). It is concluded that GSR feedback increases the effectiveness of verbal psychotherapy by providing immediate awareness of body mind relationships and by encouraging the client to express emotionally relevant concerns. (23 ref)—C. McCreary.

10267. Tourame, G. (Hôpital de la Timone, Clinique Universitaire de Psychiatrie, Marseilles, France) [The psychodrama of Moreno.] (Fren) *Encéphale*, 1975, NS Vol 1(3), 249-253. Presents some historical facts about the development of psychodrama and its introduction into the US in 1925. Psychodrama aims to liberate a human being from alienation and to restore a creative and interrelating spontaneity through the acting out and subsequent discussion.—K. J. Hartman.

10268. Tyrrell, Thomas J. (Duquesne U) **Vivid presence and technical presences in psychoanalytic and phenomenological encounter.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4680.

10269. West, Malcolm. (Ctr for Psychological Services, Montreal, Canada) **Building a relationship with the unmotivated client.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 48-51.—Offers theories and specific suggestions, illustrated by case examples, as to how the therapist can build a therapeutic relationship with an unmotivated client. He must start where the client is, and not try to begin with a set of conditions imposed on the client.—C. McCreary.

10270. Zappella, Michele. (Ospedale Regionale S. Maria della Scale, Servizio de Neuropsichiatria Infantile, Siena, Italy) **Social control in child psychiatry: A fragment of the child-doctor relationship.** *Archivio di Psicologia, Neurologia e Psichiatria*, 1975(Jan-Feb), Vol 36(1), 50-64.—One of the main problems of child psychiatry is represented by a persistent power relationship between the all-knowing doctor and the helpless child. A case of selective mutism is presented to show when nonauthoritarian child-oriented management takes place. It is suggested that child psychiatry, as an aspect of a larger social phenomenon, may be an instrument of social control and repression of children.—L. L'Abate.

10271. Zweifach, Marilyn S. (Boston U, Graduate School) **Effects of a cross-age tutoring therapy program for disadvantaged adolescent girls.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4682.

Group & Family Therapy

10272. Bayrakal, Sadi. (Jewish General Hosp, Child & Adolescent Psychiatry, Montreal, Canada) **A group experience with chronically disabled adolescents.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1291-1294.—Describes experiences as the leader of a therapy group for adolescents with muscular dystrophy. 11 14-17 yr olds confined to wheelchairs, of average or above-average intelligence, and in a regular high school curriculum were referred. The group progressed through discernible stages of dependence-flight, independence, regression, interdependence, disenchantment, and resolution. Results show that by the end of the experience, the group had developed more meaningful communication and interrelationships than they had exhibited previously. It is suggested that such groups could be helpful for other chronically disabled adolescents.—*Journal abstract*.

10275. Crowley, Joseph J. (Florida State U) **Reality versus client-centered group therapy with adolescent males.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4657.

10276. Dufour, Roger & Nadal, Jean. [Directed reverie and group imagery.] (Fren) *Etudes Psychothérapeutiques*, 1975(Jun), No 20, 69-79.—Argues that the therapeutic group process cannot be adequately ex-

plained simply as a regression, that it must be understood as a common living of archaic thought patterns, which are communicated in words. In the therapeutic group there is an oscillation between imagery and language. The directed-reverie technique applied to groups makes possible a particularly valuable mode of listening. (English, Spanish, & Portuguese summaries)—*F. Auld*.

10277. Galińska, Elzbieta. (Inst Psychoneurologiczny, Klinika Nerwic, Warsaw, Poland) [Receptive group music therapy at the Neurological Clinic of the Psychoneurological Institute, Warsaw.] (Germ) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(Dec), Vol 26(12), 714-721.—Describes music therapy with groups, conducted as part of the complex therapy for neuroses. The basic principles of such therapy and the practical difficulties encountered and overcome are discussed. (Russian & English summaries)—*T. Czeschlik*.

10278. Guillhot, Jean & Guillhot, Marie-Aimée. [A technique centered on group imagination: Group-elicited reverie.] (Fren) *Etudes Psychothérapiques*, 1975(Jun), No 20, 94-99.—Deals with problems of resistance and defensive formations arising in group therapy. Utilization of group-suggested dreams serves to clarify these defensive structures. (English, Spanish, & Portuguese summaries)—*F. Auld*.

10279. Joanning, Harvey H. (U Iowa) Behavioral reversal versus traditional therapy in the group treatment of socially nonassertive individuals. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4665-4666.

10280. Jović-Milenković, Milica. [Therapy in a large group.] (Srer) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 127-133.

10281. Kaličanin, Predrag. [Socio-psychiatric methods in work with outpatients.] (Srer) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 51-57.

10282. Kobal, Miloš. [Sociotherapeutic methods in the treatment of adolescents.] (Srer) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 59-64.

10283. Kordinak, Stanley T. (Texas A&M U) The relationship between cognitive rehearsal and the reduction of measured anxiety in college students. *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3501.

10284. Leader, Arthur L. (Jewish Family Service, New York, NY) The place of in-laws in marital relationships. *Social Casework*, 1975(Oct), Vol 56(8), 486-491.—Focuses on the importance of the spouse's family and suggests that individuals leaving their own families for marriage carry over to the in-laws a strong sense of family. Conflicts arise when the spouse seeks to work out, through the partner's family, old problems existing in the original family. Case examples illustrate the problems in treatment.—*M. W. Linn*.

10285. Meggs, Gordon. A social worker's approach to marriage counseling problems: An explanation to lay people. *Mental Health in Australia*, 1974(Aug), Vol 1(2), 58-60.—Discusses the reasons why people seek marriage counseling. Besides obvious defects in a marital relationship, such as the immaturity of individual partners and poor communication, external pressures and frustrations create severe stresses in marriage; e.g., community

disorganization, social injustices, and employment problems. Treatment of disturbed marital relationships should be directed not only at the individuals directly concerned but at the values, policies, and institutions of society as a whole.—*A. F. Vitiello*.

10286. Miller, Vinnie H. (U Oregon) An evaluation of the effect of a sexual enrichment group experience on the sexual satisfaction and sexual pleasure of married couples. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6218.

10287. Mušević, Vasko. [Acute psychotic patients in a therapeutic community.] (Srer) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 121-125.

10288. Nadal, Jean; Papas, P.; Semeriva, J.-P. & Thiberge, B. [A sketch of the imagination of the task-oriented group.] (Fren) *Etudes Psychothérapiques*, 1975(Jun), No 20, 83-88.—Proposes hypotheses for understanding how task-oriented groups in institutions function. Each "case" discussed by such a group (in a case-conference) enables the group to organize and to express unconscious themes: living through one's body (which is healthy or sick, needs food, does work), giving birth, and asserting one's sexual powers. (English, Spanish, & Portuguese summaries)—*F. Auld*.

10289. O'Brien, Charles P. (U Pennsylvania) Group therapy for schizophrenia: A practical approach. *Schizophrenia Bulletin*, 1975(Sum), No 13, 119-130.—A review of the literature indicates that group therapy may have therapeutic advantages for outpatient schizophrenics. The following points are made regarding the use of such treatment: (a) Long-term outpatient group therapy is acceptable to most schizophrenic patients. It should be introduced to the patient by a therapist experienced in the field so that the advantages can be presented to the patient. (b) Groups should be balanced according to function rather than diagnosis. (c) In treating withdrawn patients, the therapist's immediate task is to promote social interaction among the group members. (29 ref)—*Journal summary*.

10290. Padberg, Joan. Bargaining to improve communications in conjoint family therapy. *Perspectives in Psychiatric Care*, 1975(Apr-Jun), Vol 13(2), 68-72.

Examines the steps in the "bargaining" process in conjoint family therapy. Clinical data are provided to illustrate the use of the bargaining technique. One of the principal aims of conjoint family therapy is to improve the clarity and directness of communications within the family so that all members are able to participate appropriately and with some equality. Bargaining aids in communication among the family members.—*M. L. Hogan*.

10291. Pattison, E. Mansell et al. (U California, Irvine) A psychosocial kinship model for family therapy. *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1246-1251.—Family therapy has traditionally centered on the nuclear family and thus has been typically oriented toward urban White middle-class families. A variety of modifications in therapeutic technique has evolved for work with modern families whose structure consists of a functional psychosocial family kinship. A formal theoretical framework and a model for family therapy are reported that encompass the total psychosocial network (i.e., the extended kinships of the nuclear

family and the functional kin such as friends, neighbors, and associates). (51 ref)—*Journal abstract*.

10292. Pendergrass, Virginia E. (Florida State U) **Marriage counseling with lesbian couples.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 93-96.—Presents a proposal for marriage counseling for lesbian couples, illustrated with case studies. It is suggested that fears of dependence and role conflict have parallel problems in lesbian relationships; the acceptance of a particular dominant or submissive role is not necessarily consonant with acceptance of a corresponding sex identity. Issues needing further exploration are cited.—C. McCreary.

10293. Popović, Milan. [Sociotherapeutic work with large groups of inpatients.] (Srcr) *Anali Zavoda Za Mentalno Zdravlje*, 1973, Vol 5(2-3), 39-46.—Describes experiences, group interactions, and content of group therapy sessions with large groups (25-30) of inpatients in a psychiatric hospital. Besides daily group meetings, special weekend sessions and staff meetings are held. An interpretation of group dynamics is offered in terms of Hartman's ego psychology concepts. (English summary)—P. Vrtunski.

10301. Denes, Magda. (Adelphi U, Inst of Advanced Psychological Studies) **The ethos of sensitivity training.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 52-55.—Describes the historical and cultural forces that underlie the sensitivity training movement, focusing on the economic, sociologic, and psychological factors. Technocratic culture impedes the development of authentic identity and has led to the need for sensitivity groups.—C. McCreary.

10302. Diamond, Michael J. & Shapiro, Jerrold L. (U Hawaii) **An expedient model of encounter group learning.** *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 56-59.—Proposes an empirically based theoretical formulation to account for the learning that takes place in intra- or interpersonal encounter groups. A four-fold classification of such learning is suggested: personal awareness, cognitive structuring, arousal enhancement and reduction, and behavioral expression. (18 ref)—C. McCreary.

10303. Harris, Ann. (Ctr for Human Development, Springfield, MA) **The TORI model of change and the changing woman.** *Training & Development Journal*, 1975(Aug), Vol 29(8), 22-27.—Discusses TORI (standing for trust, openness, relaxation, and interdependence), a group method of sensitivity training. The goal is to intervene in people's lives to help them become more self-accepting, more growth-oriented and more connected with others. With women, however, the opposite results often occur. This is because women need first to resolve the problems of socially imposed sex roles. They need help in learning the experience of autonomous power, task orientation, intellectualizing, impersonal behavior, addressing large groups, and invulnerability to feedback. Hence, the training that is good for the male may not be good for the female.—R. L. Sulzer.

10314. Teahan, John E. (Wayne State U) **Role playing and group experience to facilitate attitude and value changes among Black and White police officers.** *Journal of Social Issues*, 1975, Vol 31(1), 35-45.—149 White and 31 Black police officers were seen in weekly sessions involving role playing and interpersonal feedback during academy training. The sessions were designed to improve communication and relationships between Black and White officers. All Ss were administered the Rokeach Value Survey, a social survey questionnaire, and a police-community attitude questionnaire both before and after the sessions. Contrary to expectation, White officers became both more sensitized to the presence of Black White problems and more prejudiced toward Blacks, whereas Black officers who attended became more positive toward Whites. It was felt that results were due in part to a perception by White officers that the program was initiated for the benefit of Blacks rather than for all.—*Journal abstract*.

Behavior Therapy & Behavior Modification

10315. Ascher, L. Michael & Phillips, Debora. (Temple U, Behavior Therapy Unit) **Guided behavior rehearsal.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 215-218.—Describes guided behavior rehearsal, a method for training individuals with a general lack of interpersonal skills. Central to the program is the peer model (a nonprofessional trained guide) who has facility in the area in which the patient has the most difficulty. The guide models appropriate behavior for the patient in the relevant troublesome social situations. The entire program centers on the desensitization paradigm utilizing in vivo desensitization and imaginal desensitization together with modeling, positive reinforcement, behavior rehearsal and assertive

training. Office sessions with the therapist are interspersed among those with the model. 4 case reports are presented.—*Journal abstract*.

10316. Bach, Roger & Moylan, Joseph J. (Salt Lake Community Mental Health Ctr, UT) **Parents administer behavior therapy for inappropriate urination and encopresis: A case study.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 239-241.—Reports on a 6-yr-old boy with a 2½-yr history of incontinence of urine and secondary reactive encopresis who was treated by his disturbed parents with an operant approach. The parents administered money rewards on a continuous schedule for appropriate expulsion and ignored soiling. The rate of urine incontinence dropped immediately, but results with the encopresis were not as successful. Accordingly, the parents began to reward the child for simply attempting to defecate, and great improvement was obtained. When the rate of inappropriate soiling dropped to near zero, the money rewards were reduced and faded into a weekly allowance. A 2-yr follow-up indicates no remission. The parents' problems remained unchanged throughout the program.—*Journal abstract*.

10317. Bailhe, John D. (Temple U) **Modeling and audience effects on fear of snakes.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3484.

10318. Ball, Thomas S. et al. (Pacific Neuropsychiatric Inst, Pomona, CA) **An accelerometer-activated device to control assaultive and self-destructive behaviors in retardates.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 223-228.—Evaluated a device for the control of assaultive and self-destructive behaviors in retardates. It consists of a portable, battery-operated electrical pulse generator which delivers an aversive, yet harmless, shock to the skin in response to the activation of accelerometers attached to a nonrestraining jacket worn by the S. Because the accelerometers respond only to violent movements or impact forces, the 2 retarded Ss, a 7½ yr old girl and a 13-yr-old boy, when not engaging in assaultive or self-destructive behaviors could move freely through the environment and engage in a normal range of activities without receiving shock. Summaries of other cases are presented.—*Journal abstract*.

10319. Bechtel, James E. & McNamara, J. Regis. (Ohio U) **Relaxation as a factor in semantic desensitization.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 925.—Assigned 32 female undergraduates with spider phobias to 1 of 4 groups: semantic desensitization (SD) and relaxation, SD and no relaxation, control-relaxation, and control-no relaxation. SD failed to promote modification of evaluative meanings evoked by the feared object. There appears to be a critical need to reassess the effectiveness of SD with other populations displaying varying types and amounts of fear.

10320. Blanchard, Edward B. & Haynes, Mary R. (Tennessee Medical Coll, Memphis) **Biofeedback treatment of a case of Raynaud's disease.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 230-234.—Successfully treated a 28-yr-old female patient with long-standing, moderately severe Raynaud's disease with biofeedback procedure based on finger tip

surface temperature. Control conditions in the experiment isolated the feedback training as the important element in the treatment. Follow-up data at 2, 4, and 7 mo with booster treatment sessions are presented.—*Journal abstract.*

10321. **Blitch, Joseph W.** (U South Carolina) **The effects of self-monitoring of eating behaviors on weight change.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4653.

10322. **Bouffard, Dennis L.** (Indiana U) **A comparison of response acquisition and desensitization approaches to assertion training.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4654.

10323. **Braukmann, Curtis J.** (U Kansas) **An evaluation of a selection interview instructional package for pre-delinquents at Achievement Place.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6233.

10324. **Cavior, Norman & Deutsch, Anne-Marie.** (California School of Professional Psychology, San Francisco) **Systematic desensitization to reduce dream-induced anxiety.** *Journal of Nervous & Mental Disease*, 1975(Dec), Vol 161(6), 433-435.—Discusses the use of a modified version of systematic desensitization to reduce the anxiety and negative interpersonal consequences produced by a recurrent aversive dream resulting from events in the real world. After 3 sessions with the therapists and several practice sessions by himself, the 16-yr-old incarcerated male S reported no further anxiety to the dream and improved relations with the institutional staff.

10325. **Conger, Judith C.; Conger, Anthony J. & Brehm, Sharon S.** (Duke U) **Fear level as a moderator of false feedback effects in snake phobics.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 135-141.—Assigned 24 high- and low-fear female undergraduates (Wolpe and Lazarus's Fear Survey Schedule) to noise or false heart-rate feedback groups. Ss also completed the S-R Inventory of Anxiousness. In addition, contiguity between the shock-snake stimuli was varied to provide a test of an aversion relief model. As was predicted, low-fear as compared to high-fear Ss approached the snake significantly more after exposure to false heart-rate feedback. The contiguity variable had no effect. Approach behavior and fear of shocks were highly correlated (.86) for low-fear false-feedback Ss only, suggesting that the contrast stimulus may play a significant role in the false heart-rate feedback effect. (16 ref)—*Journal abstract.*

10326. **Conway, John B.** (U Saskatchewan, Saskatoon, Canada) **A handbook of self-control procedures for cigarette smokers.** *Catalog of Selected Documents in Psychology*, 1975(Sum), Vol 5, 285.

10327. **Coursey, Robert D.** (U Maryland) **Electromyograph feedback as a relaxation technique.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 825-834.—Compared an EMG feedback group of 10 normal undergraduate males with 2 control conditions of 10 Ss each. One control group was told to relax but given no specific instructions nor feedback, only a constant tone. The 2nd control group was given instructions about relaxation, a constant tone but no feedback. The feedback group received variable-tone feedback from the

frontalis muscle. Every S had 1 baseline session and 7 21-min practice sessions over a 2-wk period. The feedback group achieved significantly lower EMG scores than the 2 control groups, which did not significantly differ between themselves. Measures of subjective anxiety (Mattsson's Anxiety Scale) showed significant decreases between the beginning and end of each session for all 3 groups, but only 1 of the 6 measures of state anxiety (e.g., Taylor Manifest Anxiety Scale, Nowlis Mood Adjective Check List, and Mooney Problem Checklist) favored the feedback group over the controls. No differences between groups emerged on measures of trait anxiety. (21 ref)—*Journal abstract.*

10328. **Cox, Daniel J.; Freundlich, Andrew & Meyer, Robert G.** (U Louisville) **Differential effectiveness of electromyograph feedback, verbal relaxation instructions, and medication placebo with tension headaches.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 892-898.—27 16-64 yr old Ss with chronic tension headaches were divided into 3 groups. Nine were assigned to auditory EMG feedback, 9 to progressive relaxation instructions, and 9 to placebo treatment. Ss came for 2 wks of pre- and posttreatment assessment, with 4 wks of intervening treatment. Measures were taken on headache frequency, intensity and duration, frontalis EMG recordings, medication intake, Nowicki-Strickland Loss of Control Scale, and the Psychosomatic Checklist. Comparison of postassessment and 4-mo follow-up data indicate that biofeedback and verbal relaxation instructions were equally superior to the medicine placebo on all measured variables in the direction of clinical improvement, except for shifts in locus of control. All groups experienced equally significant shifts toward internality. (17 ref)—*Journal abstract.*

10329. **Danker, P. S.; Miklich, D. R.; Pratt, C. & Creer, T. L.** **An unsuccessful attempt to instrumentally condition peak expiratory flow rates in asthmatic children.** *Journal of Psychosomatic Research*, 1975, Vol 19(3), 209-213.—Reports 2 unsuccessful attempts to operantly condition bronchial relaxation with spirometry in 11 8-11 yr old children. Only 1 of the 11 Ss showed definite signs of conditioning, and none showed any changes in their asthmatic conditions. Implications of the results for previously reported successful conditioning of this response are noted. (16 ref)

10330. **Doleys, Daniel M. & Arnold, Susan.** (U Alabama, Medical School) **Treatment of childhood encopresis: Full cleanliness training.** *Mental Retardation*, 1975(Dec), Vol 13(6), 14-16.—Describes the use of full cleanliness training in combination with positive reinforcement as a treatment for encopresis with an 8-yr-old retarded male who demonstrated a toilet phobia. Soiling was effectively eliminated at the end of 16 wks of treatment but recurred when the parents became inconsistent in their use of the procedure during follow-up. The merits of the treatment program are discussed as are some procedural difficulties.—*Journal abstract.*

10331. **Elliott, Charles H. & Denney, Douglas R.** (U Kansas) **Weight control through covert sensitization and false feedback.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 842-850.—45 undergraduates who were at least 10 lbs over their ideal weight were treated with 1 of 3 weight control procedures: (a)

attention placebo, (b) covert sensitization, and (c) covert sensitization augmented by false physiological feedback. Although all of the treatment groups lost weight, there was no differential weight loss among the groups at posttest or a 4-wk follow-up test. The effectiveness of covert sensitization beyond that of the simpler attention placebo procedure was limited to reductions in the rated desirability of foods incorporated in the treatments. The addition of false feedback led to a greater reduction in these desirability ratings beyond that which could be attributed to covert sensitization alone. Results are discussed in terms of the limited instances in which covert sensitization might be applicable as a weight control procedure. (18 ref)—*Journal abstract*.

10332. Fisher, E. B. & Winkler, Robin C. (Washington U, St Louis) **Self-control over intrusive experiences.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 911-916.—Describes the case of an 18-yr-old female undergraduate whose presenting problem consisted of recurrent, frightening, and uncontrollable visual sensations. Agreeing that the major problem with the sensations was their intrusive nature, the client cooperated in exercises designed to increase her control over the production and dismissal of them. The exercises involved producing, maintaining, and dismissing the sensations at the verbal signals of the therapist. Praise was given contingent on the client's ability to produce and dismiss the sensations faster and to maintain them longer. With 2 sensations of a particularly frightening nature, exercises were carried out after a relaxation induction. At both the 45- and 85-day follow-up, the client reported substantially reduced incidence of the sensations and no anxiety attributable to them. Data indicate that improvement was attributable to practice and to other manipulations involved in the exercise sessions themselves. (21 ref)—*Journal abstract*.

10333. Frazier, James R. & Schneider, Henry. (North Carolina Memorial Hosp, Child Development Inst, Chapel Hill) **Parental management of inappropriate hyperactivity in a young retarded child.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 246-247.—Describes a procedure used by parents of a 3-yr-old boy to eliminate inappropriate hyperactive behavior at mealtime and after meals, using a multiple baseline procedure and contingent attention and time-out. A sharp decrease in inappropriate behaviors is reported.

10334. Frederiksen, Lee W. (U Mississippi, Medical Ctr, Jackson) **Treatment of ruminative thinking by self-monitoring.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 258-259.—Reports on a 25-yr-old housewife with a 6-yr history of ruminative thinking who was treated using 2 self-monitoring procedures. Ruminative episodes were reduced in rate, but not eliminated, by a simple frequency count. A more intensive monitoring procedure (recording 7 variables surrounding each episode) virtually eliminated the episodes.

10335. Friar, Linda R. & Beatty, Jackson. (U Connecticut) **Migraine: Management by trained control of vasoconstriction.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 46-53.—Investigated the effect of operant training of vasoconstriction in the

extracranial arteries involved in migraine headache in 9 19-54 yr old Ss (experimental group). Training of vasoconstriction in an irrelevant site, the hand, was given to 9 other Ss (control group). All Ss experienced frequent and severe migraine. Arterial pulse waves were recorded from the surface of the skin with pressure plethysmographs. Training sessions included continuous visual feedback of the reinforced pulse waveform presented on a storage oscilloscope and intermittent auditory feedback determined by a digital computer. Following 8 training sessions, in a final no-feedback session the experimental group demonstrated vasoconstriction in the extracranial arteries ($p < .0005$), but the control group did not ($p < .50$). Ss were instructed to apply training at the onset of migraine. Comparison of 30-day pre- and posttraining records showed that the experimental group experienced improvement in headache symptomatology as measured by incidence of major headache attacks. Headache symptomatology was relatively stable in the control group. (18 ref)—*Journal abstract*.

10336. Gastaut, Henri. (U Marseilles, France) **Comments on "Biofeedback in Epileptics: Equivocal relationship of reinforced EEG frequency to seizure reduction" by Bonnie J. Kaplan.** *Epilepsia* 16:477-485, 1975. *Epilepsia*, 1975(Sep), Vol 16(3), 487-489.—Comments favorably on B. J. Kaplan's (see PA, Vol 55:Issue 5) study which found no appreciable evidence for a biofeedback-induced reduction of seizures in epileptic patients. Various methods for assessing the effects of biofeedback and the sometimes questionable conclusions drawn from studies using these methods are examined.

10337. Gilbert, Grant O. **Extinction procedures: Proceed with caution.** *Mental Retardation*, 1975(Dec), Vol 13(6), 28-29.—Examines the riskiness of initiating extinction procedures when consistency cannot be maintained (e.g., because of changing staff who sometimes unknowingly reward the undesirable behavior). It is pointed out that intermittent reinforcement strengthens a response, and the undesirable behaviors not only continue but are rendered more resistant to further efforts at extinction.

10338. Gladstone, Bruce W. (U Kansas) **The development and generalization of behavior modification techniques by high school students working with retarded children.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6237-6238.

10339. Goodwin, Sally E. & Mahoney, Michael J. (Pennsylvania State U) **Modification of aggression through modeling: An experimental probe.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 200-202.—Asked 4 hyperactive impulsive 6-11 yr olds to play a game involving verbal assault. Baseline observations indicated a marked inability to cope with verbal aggression. Ss subsequently viewed a videotape depicting a young boy coping with similar verbal aggression by means of covert coping self-statements. Following coaching and practice in these coping skills, all Ss demonstrated marked improvement. Classroom assessments of disruptiveness prior to and following treatment also reflected performance improvement. The interpretation of results is qualified as tentative due to the methodological limitations of the study.—*Journal abstract*.

10340. Gordon, Steven B. (Rutgers State U, Medical School, Piscataway) **Multiple assessment of behavior modification with families.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 917.—Critiques the analysis and interpretation of the paper-and-pencil outcome measures used by S. M. Eyberg and S. M. Johnson (see PA, Vol 52:12950) in a study of behavior modification with families. It is noted that no distinction was made as to which of the 5 measures were needed for a case to be a success and that of the 12 "successful" families, 5 had a negative outcome on 2 of 3 observations.

10341. Grot, James S. (Northern Illinois U) **Informational and competing-response aspects of the therapeutic procedure time-out from positive reinforcement.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4040-4041.

(U Oregon, Psychology Clinic) **Evaluating outcome data: A reply to Gordon.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 917-919.—Replies to S. B. Gordon's (see PA, Vol 55:Issue 5) comments on the authors' 1975 article on behavior modification with families. Gordon's criticism that equal weighting was given to measures differing in objectivity is refuted, and the advantages of multiple criteria assessment are outlined.

10352. Jones, Mary C. (U California, Inst of Human Development, Berkeley) **A 1924 pioneer looks at behavior therapy.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 181-187.—Briefly reviews a half century of behaviorism, especially the work of John B. Watson. Watson's experiments on children's fears and his theoretical position are discussed. (31 ref)

10353. Kaplan, Bonnie J. (VA Hosp, Neuropsychology Lab, West Haven, CT) **Biofeedback in epileptics: Equivocal relationship of reinforced EEG frequency to seizure reduction.** *Epilepsia*, 1975(Sep), Vol 16(3), 477-485.—Gave biofeedback training of 12-14 Hz activity to 2 epileptics. No effects on clinical EEGs, seizure incidence, or proportion of EEG spectral power in the frequency range being trained were observed. Subsequently, biofeedback training of 6-12 Hz Rolandic activity was provided for 3 epileptics. 2 patients experienced reductions in seizure not accompanied by medication changes. Since no learning of 6-12 Hz activity was detected, the changes in seizure incidence cannot be attributed to EEG biofeedback. It is suggested that the experience in the feedback setting provided these 2 patients with new techniques of relaxation. In view of the lack of statistical evidence of EEG changes following EEG biofeedback and the small number of patients trained to date, it appears wise to maintain a cautious attitude until the issue of causality is clear. 10357. Knapczyk, Dennis R. & Yoppi, Judith O. (Indiana U, Developmental Training Ctr) **Development of cooperative and competitive play responses in developmentally disabled children.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 245-255.

—Studied the usefulness of a behavior management procedure for training cooperative and competitive social play. Ss were 5 8–10 yr old educable mentally retarded children who had marked behavior and communication disorders. Baseline data indicated that the Ss exhibited no competitive responses and low levels of cooperative play. Upon instituting a token-praise-feedback procedure, increases in cooperative play as well as small increases in competitive play were observed. Reinstating the token-feedback procedure after reversal resulted in high levels of competitive play with no change in cooperative play. (24 ref)—*Journal abstract*.

10360. Lentz, Robert J. (NIMH, Adolf Meyer Ctr. Clinical-Research Unit, Decatur, IL) **Changes in chronic mental patients' interview behavior: Effects of differential treatment and management.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 192-199.—Assessed changes in chronic mental patients' apparent level of functioning as a function of (a) a 2-yr differential institutional treatment history (response-contingent vs noncontingent experiences) and (b) a prompt for a valued consequence awarded contingent upon improved interview behavior (prompt for impression management). The Minimal Social Behavior Scale and the Inpatient Multidimensional Psychiatric Scale were used. A 2 × 2 design with 4 groups of 10 Ss each was employed. Ss averaged 46 yrs of age and had 16 yrs of current hospitalization. Group equation, rater blinding, interrater reliabilities, and power of experimental manipulations were documented. Correlational analyses suggested that responsiveness to prompting was positively related to level of functioning. These analyses, along with group comparisons, suggest that neither recent treatment history nor positive "impression management" instructions had much effect on the interview behavior of chronic mental patients who functioned very poorly. (43 ref)—*Journal abstract*.

10361. Lick, John R. & Unger, Thomas E. (State U New York, Buffalo) **External validity of laboratory fear assessment: Implications from two case studies.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 864-866.—Exposed 1 snake-phobic woman and 1 spider phobic woman to a live snake or spider after they received systematic desensitization. In one assessment condition the 2 Ss were asked to approach and handle a caged snake or spider as in the traditional behavioral approach test, whereas in the other condition the Ss were exposed to the uncaged phobic stimuli. Both Ss manifested substantially greater physiological and cognitive distress while looking at the uncaged stimuli from a distance of 30 ft than when actually touching the caged snake or spider. Although both Ss were able to touch the

caged snake or spider, they still reported being unable to engage in behaviors that were previously inhibited because of their phobia. Both Ss emphasized the importance of feeling in control when the phobic stimulus was caged but feeling out of control when the phobic stimulus was uncaged. Implications for the external validity of the behavioral approach test are discussed. (20 ref)—*Journal abstract*.

10362. Longin, Harold E. & Rooney, William M. (Central District Guidance Ctr, Clarksburg, WV) **Teaching denial assertion to chronic hospitalized patients.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 219-222.—Trained 17 chronic hospitalized female participants in an intensive behavioral treatment program by a semi-automated assertion training procedure aimed at producing greater refusal to unreasonable demands. Ss had not been screened for deficits in assertive skills. They averaged 49 yrs of age and had an average of 11 yrs of hospitalization. The training program utilized modeling, coaching, and either overt or covert behavioral rehearsal. 10 control Ss participated in the comprehensive behavioral treatment program but received no assertion training. A 2nd control group of 8 Ss neither participated in the program nor received training. Trained Ss displayed greater refusal in the role-playing situations for which they had been trained than did controls. Overt rehearsal led to greater refusal than covert rehearsal. The greater assertion was maintained on trained, but not untrained, Ss at 24-mo follow-up.—*Journal abstract*.

10363. Lott, Daniel R. & Murray, Edward J. (U Miami, FL) **The effect of expectancy manipulation on outcome in systematic desensitization.** *Psychotherapy: Theory, Research & Practice*, 1975(Spring), Vol 12(1), 28-32.—Studied the effect of expectancy manipulation on outcome in systematic desensitization. Ss were 24 male and female psychology students who reported a fear of snakes. Expectancy manipulation was independently assessed by asking Ss to predict their ability to overcome their fears and the expectancy effect was validated. 48 other Ss from the same pool were given positive or neutral expectancy followed by relaxation training and systematic desensitization. Ss in the positive expectancy condition showed a greater approach to the snake than those in the neutral group although both groups improved significantly. Findings are accounted for in terms of genuine changes of belief rather than as mere superficial compliance. (28 ref)—*C. McCreary*.

10365. Marshall, W. L. (Queen's U, Kingston, Canada) **Reducing masturbatory guilt.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 260-261.—Presents a case of a 22-yr-old male which illustrates difficulties that may be encountered when modifying sexual fantasies where guilt is associated with masturbation and demonstrates a method for reducing such guilt. A reinforcement procedure successfully increased positive thoughts and feelings about masturbation so that orgasmic reconditioning was facilitated.

10366. Mathis, Harold I. (Comprehensive Psychiatric Services, Southfield, MI) **Instating sexual adequacy in a disabled exhibitionist.** *Psychotherapy: Theory, Research & Practice*, 1975(Spring), Vol 12(1), 97-100.—Describes the continuous case treatment of an amputee referred for behavior therapy for exhibitionism, to show how the behavior therapist can use a variety of techniques to suit special needs of his clients. Hypnosis for relaxation, covert sensitization for self-restraint, token reinforcement to encourage prosocial behavior, role-playing to rehearse assertion, and aversive shock to consolidate the effects of the covert program were all used. In addition, a Masters and Johnson program was used to treat premature ejaculation. It is concluded that, contrary to the the impression from much of the behavioral literature, such a combination of techniques is necessary for the clinician in dealing with the many clients whose complaints are multiple and interwoven.—C. McCreary.

(City Coll, City U New York) **Behavior therapy and the facilitation of psychoanalytic exploration.** *Psychotherapy: Theory, Research & Practice*, 1975(Spring), Vol 12(1), 68-72.—Suggests that behavior therapy techniques be used to facilitate psychoanalytic treatment. At times, direct efforts to relieve specific troubling behavior and reduce incapacitating anxiety may be necessary for progress in psychoanalytic treatment. The exclusivity of both the behavioral and psychoanalytic approaches is criticized. Case studies illustrate these views.—C. McCreary.

10387. Weathers, Lawrence & Liberman, Robert P. (Florida Mental Health Inst, Tampa, FL) **The family contracting exercise.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 208-214.—Describes the family contracting exercise, a structured learning experience through which an adolescent and his or her parents can develop a mutually acceptable contingency contract. The exercise, introduced and facilitated by a therapist, leads family members in a stepwise fashion from (a) identifying their needs and desires (rewards) for themselves and each other to (b) setting priorities on rewards for self, (c) empathizing with each other, (d) setting costs on providing rewards to others, and (e) bargaining and compromising. An experienced behavioral clinician can usually develop a contract with a cooperative family in 2 hrs using the exercise. The rationale for the usefulness of contracting lies in moving family members from coercive to reciprocal interpersonal exchanges. Guidelines for contracting are specified, and the procedure for using the exercise is operationalized.—*Journal abstract.*

10388. Werry, J. S. & Bull, D. (U Auckland, Medical School, New Zealand) **Anorexia nervosa: A case study using behavior therapy.** *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 646-651.

Describes a case in which operant conditioning was used with reward contingent upon weight gain. Reward was parental attention, staff attention, and schoolwork.

10389. Wolfensohn, Lawrence S. (Wayne State U) **Modification of eating patterns in the obese through covert sensitization: An integration of learning and dynamic positions.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3513-3514.

Drug Therapy

10392. Angrist, Burton; Thompson, Hyacinth; Shapiro, Baron & Gershon, Samuel. (New York U Medical Ctr,

Neuropsychopharmacology Research Unit) **Clinical studies with dopamine-receptor stimulants.** *Psychopharmacologia*, 1975, Vol 44(3), 273-280.—Oral administration of ET-495 caused worsening of psychiatric status in 4 out of 7 schizophrenic inpatients and induced a paranoid state and a syndrome of auditory hallucinosis in 2 nonschizophrenics. These observations were compatible with the hypothesized role of dopamine in schizophrenia. However, these psychotogenic effects were far less dramatic than those noted in other studies with amphetamine, methylphenidate, or levodopa. Possible explanations for this differing psychotogenic potency of receptor stimulators vs presynaptic agonists are presented. ET-495 and apomorphine given iv did not show psychotogenic effects. (39 ref)—*Journal abstract.*

10393. Arnone, A.; del Priore, M.; Menduni, G. & Modonesi, C. (Ospedale Psichiatrico Provinciale, Cogliato, Italy) **[Little known therapeutic properties of imipramine in manic states of cyclothymic psychosis.]** (Ital) *Neuropsychiatria*, 1974(Jan-Jun), Vol 30(1-2), 127-131.—Rapid reduction and subsequent disappearance of manic states are reported in 5 cases of cyclothymic psychosis with the daily administration of 150-200 mg imipramine. In all cases the psychosis had been present for many years and the previous manic states had been long-lasting and unresponsive to chemotherapy. Japanese and Cuban studies reporting stabilization of affect in manic states with imipramine are cited. It is proposed that imipramine, at times in combination with lithium therapy, may be useful in the prophylaxis of dysthymic episodes. (English, French & German summaries) (15 ref)—A. Felice.

10394. Bouckson, G. (Ctr médical du Petit Arbois, Les Milles, France) **[Mental illness among geriatrics.]** (1 ren) *Encéphale*, 1975, NS Vol 1(3), 227-231.—Cautions that the value of chemotherapy becomes illusory in treating geriatric patients. Iatrogenic pseudo-dementia can often be expected as an irreversible effect of prolonged drug treatment. The geriatric psychiatric patient dies more peacefully than an old person who becomes psychotic late in life.—K. J. Harman.

10395. Buscalino, G. A. & Steardo, L. (U Napoli, Facoltà di Medicina e Chirurgia, Clinica delle Malattie Nervose e Mentali, Italy) **[Efficacy of oral treatment with L-tryptophan in subjects complaining of insomnia: Preliminary results.]** (Ital) *Acta Neurologica*, 1975(Jul-Aug), Vol 30(4), 411-415.—Ten patients who were given 2g/day levotryptophan, alone or combined with the usual neurosedatives exhibited constant rapid improvement and increase of total sleep. Addition of flurazepam was helpful. (English summary) (24 ref)—M. Stanford.

10396. Campbell, Magda et al. (New York U, Medical School) **Levodopa and levoamphetamine. A crossover study in young schizophrenic children.** *Current Therapeutic Research*, 1976(Jan), Vol 19(1), 70-86.—Compared the effects of levodopa and levoamphetamine in a double-blind study with 12 3-6 yr old schizophrenic inpatients. Optimal daily doses of levodopa ranged from 900 to 2,280 mg/day; those of levoamphetamine from 45 to 42 mg/day. Although improvements on levodopa did not reach statistical significance, on the basis of nonblind ratings and informant reports of blind staff and parents,

levodopa merits further exploration in preschool psychotic children, chiefly because of its stimulating behavioral effects. Levoamphetamine yielded poor results. (42 ref)—*Journal abstract*.

10397. de Maio, D. et al. [Choice and selectivity of antidepressant drugs following clinical and psychometric investigations of different depressive syndromes.] (Ital) *Acta Neurologica*, 1975(May-Jun), Vol 30(3), 307-331.—Treated 82 hospitalized males suffering from endogenous, neurotic, or secondary depression with tricyclic antidepressants (imipramine, dibenzepine, or amitriptyline). After 10 days of treatment the Hamilton Rating Scale for Depression and Zung's Self-Rating Depression Scale were administered. It is concluded that (a) the differential diagnosis of the depressive syndrome generally responds more to needs related to classification and clinical diagnosis than to operative requirements; (b) psychometric tests are more useful quantitatively than qualitatively and have more psychopharmacological than psychopathological value; (c) therapy with antidepressant drugs has characteristics similar to that using neuroleptic drugs; and (d) adequate maintenance of therapy is needed. (81 ref)—*M. J. Stanford*.

10398. Deniker, P.; Loo, H.; Verdeaux, G. & Oughourlian, J.-M. (Hôpital Ste-Anne, Paris, France) [A clinical and electroencephalographic study of a new antidepressant agent: Chlorhydrate 3-[N-Methyl-9,10-ethanoanthracene-9-(10H)]-propylamine.] (Fren) *Encéphale*, 1975, NS Vol 1(3), 265-278.—Reports clinical success with a new antidepressant compound Ciba 34,276-Ba (Ludiomil). Ss were 47 men and 3 women between the ages of 18 and 72 with a mean age of 35. Best results were noted for neurotic and reactive depression. Clinical tolerance was good, side effects remained moderate, and biological tolerance was excellent. Modification of EEGs during medication suggest thymoanaleptic and sedative activity.—*K. J. Hartman*.

10399. Dotti, Andrea. (U Degli Studi, Rome, Italy) [Five years of experience with lithium carbonate.] (Ital) *Rivista di Psichiatria*, 1975(May-Jun), Vol 10(3), 215-230.—Observed 149 manic-depressive psychotic patients who were under prolonged treatment with lithium. The following points are discussed: (a) clinical and therapeutic factors considered in selecting the sample, (b) reasons for interrupting therapy in some cases, (c) behavior during therapy, and (d) problems of evaluating therapeutic effectiveness. Results are difficult to interpret since the study lacked controls. (16 ref)—*Journal summary*.

10400. Filbo, U. Vianna; Versiani Caldeira, Márcio, V. & Romildo Bueno, J. (U Federal do Rio de Janeiro, Inst de Psiquiatria, Brasil) The efficacy and safety of loxapine succinate in the treatment of schizophrenia: A comparative study with thiothixene. *Current Therapeutic Research*, 1975(Sep), Vol 18(3), 476-490. Compared the efficacy and safety of loxapine (10-120 mg/day) and thiothixene (3-36 mg/day) when administered orally, during a 12-13 wk study, to 50 hospitalized acute and chronic schizophrenics. Each group was subdivided by duration of illness: less than 2 yrs, 2-10 yrs, and more than 10 yrs. Loxapine was statistically superior to thiothixene on many items depressive the Brief Psychiat-

ric Rating Scale and the Nurses' Observation Scale for Inpatient Evaluation in the below-2-yrs and the 2-10 yrs group. The reverse was true in the over-10-yrs group. The most frequently reported symptoms for both were extrapyramidal. The number of patients having dystonic, neurologic, cardiovascular, and miscellaneous side effects were about equally divided for both treatment groups. Akathisia, drowsiness, behavioral and anticholinergic effects occurred in twice as many patients taking loxapine as in those given thiothixene. However, it was not necessary to discontinue the drug in any of the patients given loxapine. It is concluded that loxapine is a valid alternative in the treatment of schizophrenia.—*Journal abstract*.

10401. Franchini, C. L. et al. (Ospedale Psichiatrico Provinciale, Novara, Italy) [The problem of chronic schizophrenia: Proposed treatment with injectable flupenthixol: Prolonged effects with neuroleptics.] (Ital) *Neuropsychiatria*, 1974(Jan-Jun), Vol 30(1-2), 113-125.—The use of weekly intramuscular injections of flupenthixol decanoate is recommended for the treatment of resistant cases on the basis of clinical trials with 13 male schizophrenics 24-54 yrs old who had been continuously hospitalized for at least 10 yrs. Six of the cases showed improvement, with 3 reportedly discharged from the hospital. Specific beneficial effects noted were reduction of apathy, emotional flatness, and autistic thinking, and greater interest in the environment and interaction with others. The drug seemed more effective with simple and hebephrenic than with paranoid schizophrenics, 4 of whom showed psychomotor agitation and deterioration on the regimen. (English, French & German summaries)—*A. Felice*.

10402. Fyrö, Bengt; Petterson, Ulla & Sedvall, Göran. (St Göran's Hosp, Stockholm, Sweden) The effect of lithium treatment on manic symptoms and levels of monoamine metabolites in cerebrospinal fluid of manic depressive patients. *Psychopharmacologia*, 1975, Vol 44(1), 99-103.—Studied the clinical effects, levels of 5-hydroxyindoleacetic acid (5-HIAA) and homovanillic acid (HVA) in cerebrospinal fluid (CSF) and lithium levels in serum in 13 18-69 yr old manic depressive patients acutely admitted because of a manic or hypomanic episode. Ss were examined before and 12 days after the beginning of lithium treatment. Lithium doses ranged from 24.3 to 48.6 mEq. Manic scores were significantly reduced during treatment. 5-HIAA and HVA levels increased significantly during treatment. The HVA-5-HIAA ratio was significantly reduced, indicating a more pronounced change in 5-HIAA than in HVA. The 5-HIAA and HVA levels before and after 12 days of treatment were significantly correlated. No significant correlation was found between manic scores and monoamine metabolites in CSF or between lithium level in serum and reduction of manic scores or elevation of monoamine metabolites in CSF. (31 ref)—*Journal abstract*.

10403. Ginestet, D. (Hôpital de Versailles, France) [Efficacy and tolerance limits of antidepressive drugs.] (Fren) *Encéphale*, 1975, NS Vol 1(3), 203-210.—Reports that 35-40% of all depressive states will resist antidepressant drugs. Resistant states include recurrent depression, hypochondriac depression in aged patients, and depres-

sive states in psychotic evolutions. Problems of tolerance are discussed, especially side effects of confusional states and toxicity. The problems of determining maximum suicidal doses and the effects of extended usage are unsolved.—K. J. Hartman.

10404. Greenberg, Lawrence M. & Yellin, Absalom M. (U Minnesota Hosp, Div of Child & Adolescent Psychiatry, Minneapolis) **Blood pressure and pulse changes in hyperactive children treated with imipramine and methylphenidate.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1325-1326.—Found significant increases in systolic and diastolic blood pressure and pulse rate in hyperactive children treated with imipramine. Ss were 47 6-13 yr olds who completed an 8-wk double-blind crossover study in which half of them received imipramine or methylphenidate followed by placebo and the other half received placebo followed by imipramine or methylphenidate. Methylphenidate-treated Ss showed significant weight loss but no significant changes in blood pressure or pulse. Caution is recommended in the use of imipramine, and the need for further study to determine short- and long-term effects of imipramine on blood pressure is suggested.—*Journal abstract*.

10405. Henneborn, William J. & Cogan, Rosemary. **The effect of husband participation on reported pain and probability of medication during labor and birth.** *Journal of Psychosomatic Research*, 1975, Vol 19(3), 215-222.—Compared the births of 38 women whose husbands were present during labor and birth with those of 11 women whose husbands were only present during the 1st stage of labor. All Ss were enrolled in childbirth education classes, and husbands had been encouraged to participate as labor coaches throughout delivery. Those women whose husbands attended labor and birth reported less pain and had a significantly lower probability of receiving medication during the delivery. Couples in which the husband was present during both aspects of the delivery process reported more positive feelings about the total birth experience. (38 ref)—*Journal abstract*.

10406. Ikushima, Masahiro & Matsunaga, Katsuya. (Kyushu U, Faculty of Medicine, Japan) **[Pupillary light reactions of medicated and non-medicated schizophrenics.]** (Jpn) *Kyushu Neuro-psychiatry*, 1975, Vol 21(2), 119-124. Reports the amplitudes and speeds of pupillary responses to light stimulation of male and female Ss—16 medicated schizophrenics (ages 14-28), 19 nonmedicated schizophrenics (ages 16-38), and 19 controls (ages 16-51). The responses were recorded by an infrared electronic scanning pupillometer. A light stimulus of 10-sec duration was given 3 times at 60-sec intervals. There was no significant difference between the 2 schizophrenic groups in terms of mean amplitudes of pupillary constriction, but the mean amplitudes of both schizophrenic groups were significantly smaller than those of the control group. Both schizophrenic groups responded significantly faster than the control group. The evidence suggests that the response characteristics of both schizophrenic groups were influenced by reduction of parasympathetic activity of the pupillary light reflex arc, by an increase in the inhibitory adrenergic effect from the posterior hypothalamus to the Edinger-

Westphal nucleus, and by a combination of these 2 factors. (English summary) (24 ref)—S. Ashida.

10407. Lapierre, Y. D. & Lee, M. (Pierre Janet Hosp, Hull, Canada) **Piperacetazine in the treatment of mixed neurotics.** *Current Therapeutic Research*, 1976(Jan), Vol 19(1), 105-109.—38 neurotic outpatients with anxiety as their presenting symptom were treated with placebo or piperacetazine (10 mg 3 times/day) in a double-blind study. There was significant improvement in both groups during the 4 wks of treatment. At no time were there significant drug differences demonstrable with a clinical global impression, the Wittenborn Psychiatric Rating Scale, the Hamilton Anxiety Rating Scale, nor the Zung Anxiety and Depression Self-Rating Scales.—*Journal abstract*.

10408. Lee, C. R. et al. (MRC Research Council Unit for Metabolic Studies in Psychiatry, U Sheffield, England) **The relationship of plasma to erythrocyte lithium levels in patients taking lithium carbonate.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 596-598.—Repeatedly determined the plasma and erythrocyte lithium levels in 12 patients taking lithium carbonate for affective disorders. For each S, the plot of the plasma lithium level against erythrocyte/plasma ratio was linear, but the ratio would either increase or decrease with increasing plasma lithium concentration. It is suggested that erythrocyte/plasma ratio is an unsound basis for comparing individual responses to lithium.—*Journal abstract*.

10409. Lehmann, Heinz E. (Douglas Hospital Ctr, Montreal, Canada) **Psychopharmacological treatment of schizophrenia.** *Schizophrenia Bulletin*, 1975(Sum), No 13, 27-45.—Discusses the diagnosis and pharmacological treatment of schizophrenia. The selection, use, and effectiveness of neuroleptic drugs; treatment procedures; and some of the adverse reactions of these drugs (e.g., oversedation, tardive or persistent dyskinesia, and blood dyscrasias) are examined. It is concluded that neuroleptic drugs give the psychiatrist the means of controlling and decreasing the risk of relapse to a considerable extent, if it is felt that the whole complex of constitutional, social, and psychological factors presented by each schizophrenic person seem to make such pharmacological control desirable. (55 ref)—M. E. Pounsel.

10410. Lieto, L.; Citarella, S. & Dionisio, A. (Hosp Provinciale Generale, Div Neurologica, Avellino, Italy) **[Hysterical syndromes and trazodone.]** (Ital) *Acta Neurologica*, 1975(Jul-Aug), Vol 30(4), 397-403. Reports a 2-yr study of 38 patients 8-60 yrs old, diagnosed as suffering from hysteria, who were treated with trazodone, a psychopharmacological drug, considered particularly indicated in hysteria.—M. Stanford.

10411. Pool, D. et al. (Tulane U, Medical School) **A controlled evaluation of Loxitane in seventy-five adolescent schizophrenic patients.** *Current Therapeutic Research*, 1976(Jan), Vol 19(1), 99-104.—A 4-wk double-blind evaluation of loxapine (Loxitane), haloperidol, and placebo was conducted in 75 13-18 yr old inpatients with a diagnosis of schizophrenia, acute or chronic with acute exacerbation. Side effects were relatively nonsignificant except for the incidence of extrapyramidal phenomena and somnolence. Both of the active antipsychotic agents showed clear superiority to placebo in relation to some

of the important psychologic test items associated with schizophrenic symptomatology (as determined by the Brief Psychiatric Rating Scale and the Nurse's Observation Scale for Inpatient Evaluation). It is concluded that Loxitane appears to be a relatively safe and efficacious compound for the treatment of adolescent schizophrenia as well as for acutely ill and chronically ill adult schizophrenic patients.—*Journal abstract.*

10412. Rogers, S. C. & Clay, P. M. (Hosp of St Cross, Rugby, England) A statistical review of controlled trials of imipramine and placebo in the treatment of depressive illnesses. *British Journal of Psychiatry*, 1975(Dec), Vol 127, 599-603.—A method of reviewing a series of clinical trials by extracting the basic data in the form of 2×2 tables and analyzing these by R. A. Fisher's (1934) 2-tailed Exact Test is described, and illustrated by published imipramine-placebo trials. Results suggest that the benefit of this drug in patients with endogenous depression who have not become institutionalized is indisputable, and that further drug-placebo trials in this condition are not justified. 2 of the 3 trials of imipramine in neurotic depression gave results showing significant improvements. Possible explanations of the apparent failure of this drug in groups of patients with undifferentiated depression are discussed. (41 ref)—*Journal abstract.*

10413. Salvadorini, Francesco et al. (Psychiatric Hosp of Volterra, Pisa, Italy) Clinical evaluation of CDP-choline (Nicholin): Efficacy as antidepressant treatment. *Current Therapeutic Research*, 1975(Sep), Vol 18(3), 513-520.—Administered 500 mg/day of cytidine diphosphate choline (CDP-choline) to 8 53-67 yr old inpatients with depressive illnesses. Plasma growth (GH) levels were evaluated daily and the Hamilton Rating Scale for Depression was completed weekly. The finding of a reduced GH response suggests that an impairment in dopamine metabolism is a major feature in the genesis of depressive disorders. Hamilton ratings showed significant decreases in depressive symptoms in all Ss. It is suggested that CDP-choline may act through an activation of a dopaminergic system. (17 ref)—*L. Gorsey.*

10414. Scotto, J. C. (Hôpital de la Timone, Clinique Universitaire de Psychiatrie, Marseilles, France) [Substitutes for benzamides.] (Fren) *Encéphale*, 1975, NS Vol 1(3), 223-225. Compares therapeutic effects of 3 benzamide substitutes: sulpiride, sultopride, and GRI 1665. Sulpiride releases inhibition; sultopride is a sedative, at first; and GRI 1665 is a tranquilizer. All act as tranquilizers in sufficient dosage, and all are generally well tolerated.—*K. J. Hartman.*

10415. Sheppard, Charles; Moan, Eugene; Fracchia, John & Merlis, Sidney. (Long Island Research Inst, Demographic & Special Studies Lab, Central Islip, NY) Psychiatrists' prescription practices: Comparative survey with incidence data from California, New York, Pennsylvania, and Texas. *New York State Journal of Medicine*, 1975(Jul), Vol 75(8), 1327-1333. Surveyed 778 psychiatrists in 4 states to assess their use of polypharmacy (concurrent administration of 2 or more psychotropic agents to relieve or reduce the intensity of psychiatric symptoms). At early treatment stages, psychiatrists in New York and California employed similar rates of polypharmacy, which were higher than the rates

in Pennsylvania and Texas. Rates increased with time of treatment as single-drug therapy remained ineffective in altering symptom patterns. By the patient's 3rd hospitalization, 50% of the respondents selected a combination of drugs. The relationships between polypharmacy and social, administrative, and medical values and attitudes are discussed.—*P. R. Sweet.*

10416. Simpson, George M.; Zoubok, Boris & Lee, J. Hillary. (Rockland Psychiatric Ctr, Research Inst, Orangeburg, NY) An early clinical and toxicity trial of EX-11-582A in chronic schizophrenia. *Current Therapeutic Research*, 1976(Jan), Vol 19(1), 87-93.—10 29-64 yr old chronic schizophrenic inpatients were given EX-11-582A in dosages from 10-200 mg daily for 12 wks. The patients' clinical condition deteriorated during the initial placebo baseline, and although the global means increased a little during EX-582A administration, this reflected more a hold effect rather than real improvement, except in 2 patients who showed improvement in psychotic symptoms. In the group as a whole, psychotic symptoms (hallucinations, unusual thought content, and blunted affect) worsened significantly. Side effects consisted of moderate to severe sedation to which the patients did not accommodate, and mild tremor and tachycardia. EX-11-582A produced a small increase in pulse rate, a slight increase in lying blood pressures, and no EKG, eye, or laboratory abnormalities. Tardive dyskinesia symptoms decreased with EX-11-582A administration and increased during the postdrug phase. It is concluded that EX-11-582A had little antipsychotic activity. The upsurge in psychotic behavior and tardive dyskinesia on withdrawal of the drug was noteworthy.—*Journal abstract.*

10417. Small, Joyce G.; Kellams, Jeffrey L.; Milstein, Victor & Moore, Joseph. (Indiana U, Medical School, Indianapolis) A placebo-controlled study of lithium combined with neuroleptics in chronic schizophrenic patients. *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1315-1317.—Administered lithium combined with major tranquilizers to 22 hospitalized chronic schizophrenic patients (mean age, 36 yrs) with minimal neurotoxicity or other side effects. Moreover, 10 of the patients benefited significantly with lithium as compared to placebo in terms of blind psychiatric and nursing ratings and nonblind clinical judgments of outcome. Results contrast with previous negative reports in the literature and the generally poor prognosis in chronic schizophrenic patients. It is suggested that a trial combining lithium with psychotropic drugs is warranted in schizophrenic patients who do not respond satisfactorily to conventional treatment. (16 ref)—*Journal abstract.*

10418. Springer, Nina S. & Fricke, Norma L. (U Michigan, Inst for the Study of Mental Retardation and Related Disabilities) Nutrition and drug therapy for persons with developmental disabilities. *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 317-322.—Reviews the literature on drugs which affect nutrient metabolism and diet in developmentally disabled persons. Many investigators have found side effects of anticonvulsant drugs on vitamin D, calcium, folic acid, and vitamin B₆ metabolism. Growth-retarding effects of certain CNS stimulants have also been reported. Tranquilizers and antidepressant therapy ap-

pear to have no effects on nutrient metabolism. Vitamins used in pharmacologic doses are considered as drugs, and their therapeutic use is briefly reviewed. More research on biochemical interaction of drugs and nutrients is recommended. (41 ref)—*Journal abstract*.

10419. Stores, Gregory. (U Oxford, Warneford Hosp, England) **Behavioural effects of anti-epileptic drugs.** *Developmental Medicine & Child Neurology*, 1975(Oct), Vol 17(5), 647-658.—Reviews data relevant to the study of the effects of anti-epileptic drugs on behavior. It is concluded that the psychopharmacology of anti-epileptic drugs is unsatisfactory at present because of inadequate and unsophisticated reporting of behavioral change and because of the common problem of polypharmacy, and that more accurate observations are needed on less heterogeneous groups of patients than have been described in the past. (46 ref)—*Journal abstract*.

10420. Sugarman, A. Arthur; Swartzburg, Marshall; Mueller, Peter S. & Rochford, Joseph. (Carrier Clinic Foundation, Belle Mead, NJ) **Oral protirelin (T.R.H.) in depression.** *Current Therapeutic Research*, 1976(Jan), Vol 19(1), 94-98.—Synthetic thyrotropin-releasing hormone (TRH) was given to 16 24-61 yr old severely depressed inpatients. A double-blind design was used in which some patients received 300 mg orally on each of 3 days in the 1st week of the study, while the others had this dose in the 2nd week. Placebo was given on all other days. The compound showed no evidence of antidepressant activity or significant adverse effects.—*Journal abstract*.

10421. Van Kammen, Daniel P. & Murphy, Dennis L. (NIMH, Adult Psychiatry Branch, Bethesda, MD) **Attenuation of the euphoric and activating effects of d- and l-amphetamine by lithium carbonate treatment.** *Psychopharmacologia*, 1975, Vol 44(3), 215-224.—Over an 11-day period, 7 of 9 depressed patients experienced a 4.3-fold increase in rated euphoria and activation following 30 mg dextroamphetamine in a replicated dose double-blind study. Dextroamphetamine was 2-2.3 fold more effective in producing activation, euphoria, and antidepressant effects than the same dose of levoamphetamine. Co-treatment with lithium carbonate produced a 60% attenuation of the activation and euphoria responses to dextroamphetamine. The responses to levoamphetamine were almost completely abolished by lithium. This study raises the possibility of lithium carbonate use as an adjunct in the treatment of amphetamine addiction. (41 ref)—*Journal abstract*.

10422. Viukari, M. & Linnoila, M. (Koskela Geriatric Hosp, Helsinki, Finland) **Effect of methylodopa on tardive dyskinesia in psychogeriatric patients.** *Current Therapeutic Research*, 1975(Sept), Vol 18(3), 417-424.—Administered 250 mg t.i.d. of methylodopa or placebo to 15 chronic psychogeriatric patients (mean age, 77 yrs) for 2 wks. Methylodopa proved more effective than placebo in relieving tremor, rigidity, and oro-facial dyskinesia. Akinesia and akathisia were not significantly relieved. (21 ref)—*Journal abstract*.

Hypnotherapy

10423. Calnan, Ross D. (U Kansas) **Effects of direct hypnotherapeutic intervention on the ego strength of psychiatric patients.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3488.

10424. Dempster, Clifford R.; Balson, Paul & Whalen, Barbara T. **Supportive hypnotherapy during the radical treatment of malignancies.** *International Journal of Clinical & Experimental Hypnosis*, 1976(Jan), Vol 24(1), 1-9.—Notes that modern medicine has made great strides in developing chemotherapeutic and radiologic measures to arrest or retard the malignant disease process. The patient, however, is often rendered acutely uncomfortable by the side-effects of the treatment. Hypnotherapy is pointed to as a means of supporting the patient in a radical regime by alleviating discomfort, as well as by offering a unique interpersonal environment within which to deal with the issues posed by terminal or potentially terminal illness. A case report is presented and discussed. (German, French & Spanish summaries)—*Journal abstract*.

10425. Kline, Milton V. (Inst for Research in Hypnosis, Morton Prince Clinic, New York, NY) **Sensory hypnotherapy and regression during psychological stress.** *Clinical Social Work Journal*, 1975(Win), Vol 3(4), 298-308.—Sensory hypnotherapy is described as an experimental treatment approach designed to expand sensory experience by initially restricting verbal output and by intensifying visual imagery. Case examples illustrate the treatment process. Sensory hypnotherapy is said to intensify affect, to help reorganize ideational processes, and to integrate both cognitive functioning and emotional responsiveness.—S. R. Stein.

10426. Walch, Shelby L. (Metropolitan State Hosp, Norwalk, CA) **The red balloon technique of hypnotherapy: A clinical note.** *International Journal of Clinical & Experimental Hypnosis*, 1976(Jan), Vol 24(1), 10-12.—Describes a technique in which the patient is alleviated of excessive guilt feelings (or rage, hostility, etc) by means of hypnotically induced visual hallucinations. The patient is told to put his undesirable feelings into a container, then visualize a red balloon pulling the container skyward and out of sight.

Speech Therapy

10427. Diener, Stuart. (U Maryland) **A study of self-concept change in stutterers as a function of an intensive, traditional speech therapy program.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3551-3552.

10428. Freilinger, John J. (U Kansas) **Generalization of newly acquired phonemic responses in the home environment.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3552.

10429. Keith, Robert L. & Aronson, Arnold. (Mayo Clinic & Foundation, Rochester, MN) **Singing as therapy for apraxia and aphasia: Report of a case.** *Brain & Language*, 1975(Oct), Vol 2(4), 483-488.—Describes the case of a 48-yr-old female who experienced a sudden episode of right hemiplegia and homonymous, severe apraxia of phonation and articulation, and aphasia. While conventional speech and language therapy was unsuccessful, following singing therapy she was able to function in her home with limited speech ability, but the pitch, melody, and quality of her voice were different from that prior to a cerebral vascular accident.

10430. Lanyon, Richard L. & Barocas, Victor S. (Arizona State U) **Effects of contingent events on**

stuttering and fluency. *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 786-793.—In Study 1 with 4 male 18-20 yr old stutterers, the effect on stuttering frequency of contingent monetary gain and contingent monetary loss for stuttering was examined individually for over 12 hrs, using control periods when no contingency was present. Both contingencies resulted in decreased stuttering, suggesting that the effect of observing and recording instances of stuttering was more powerful than the money. In Study 2, monetary gain and loss was made contingent on units of fluent speech for 5 male and 1 female 17-34 yr old stutterers over 12 hrs. Fluency increased for the group during monetary gain, but monetary loss did not have the predicted effect of decreasing fluency, perhaps because the contingent events served also to enhance self-observation. (15 ref)—*Journal abstract*.

10431. Reed, Charles G. (U Kansas) **An investigation of the relationship between punishment, GSRs, and stuttering.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B) Pt 1, 6263-6264.

10432. St Louis, Kenneth O. (U Minnesota) **The effects of motor speech awareness on stuttering.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3554.

Health Care Services

10433. Aghaie, Reza. (U Tennessee) **Determinants influencing the practice of medical care among a selected elderly population.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 3888-3889.

10434. Brand, Frederick N. & Smith, Richard T. (Boston U, Medical Ctr, Section of Preventive Medicine & Epidemiology) **Medical care and compliance among the elderly after hospitalization.** *International Journal of Aging & Human Development*, 1975(Fal), Vol 5(4), 331-346.—Follow-up of 14 chronically ill patients 6 mo after discharge from a general hospital revealed a high readmission rate (34%), a high utilization of hospital services, outpatient clinics, and family practitioners. The study of compliance with physician's recommendations showed that 42% of all patients interviewed did not comply with 1 or more recommendations. The reasons for noncompliance were related to the deficiencies of community health and social agencies, the patient's attitude or understanding of the instructions, the cost of drugs, and other factors. The lack of compliance was associated with marital status, education, income, and severity of disease. (30 ref)—A. J. Traxler.

10435. Bussom, Robert S. (Ohio State U) **Cybernetic modeling in health: An application to head nurse behavior.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 3871-3872.

10436. Cross, Elsie D. (U North Carolina, Chapel Hill) **Psychosocial assets and recovery from coronary bypass surgery.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4477-4478.

10437. Enoch, M. David & Jones, Keith. (Liverpool Royal Infirmary, England) **Sterilization: A review of 98 sterilized women.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 583-587.—Interviewed 98 females sterilized over a 3-yr period to examine both the advantages and disadvantages of the operation. Results

indicate that female sterilization is a safe procedure which has a satisfactory result in many cases and confers many secondary benefits. However, some regret was common and was associated with a high incidence of psychiatric and marital morbidity, and this is shown to be related to pre-operative factors. A method of pre-operative assessment is outlined which should minimize the risk of a poor outcome following female sterilization.—*Journal abstract*.

10438. Francis, Leslie J. (U Northern Colorado) **The relationship of eye anomalies and reading ability, and an analysis of vision-screening programs. (Volumes I & II).** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-A), 3687.

10439. Fullilove, Emma S. (Columbia U) **Patients' views of actual and ideal characteristics of the psychiatric clinical nurse specialist as depicted by the LaForge and Suckek Interpersonal Check List.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6496-6497.

10440. Gordon, Alistair M. (St Mary's Hosp, London, England) **Psychological aspects of isolator therapy in acute leukaemia.** *British Journal of Psychiatry*, 1975(Dec), Vol 127, 588-590.—Describes psychological features of isolator treatment in 10 acute leukemia patients. It is argued that treatment under conditions of gnotobiotic isolation can augment the stress of adaptation to a diagnosis of leukemia. Identification of the psychological problems experienced in isolator treatment can contribute to the effective maintenance of therapy. Individual patterns of adjustment to treatment relate to the psychological defense mechanisms employed to contend with the dependent position enforced by isolation. Psychiatric assessment can assist both patients and nursing staff with the management of their separate difficulties in this unfamiliar treatment situation. Suggestions are proposed for psychological management of patients under isolator conditions.—*Journal abstract*.

10441. Harris, Raymond. (St Peter's Hosp, Albany, NY) **Maintaining the geriatric patient's identity.** *New York State Journal of Medicine*, 1975(Jul), Vol 75(8), 1252-1255.—Discusses the roles of physicians in maintaining their patients' identities, including (a) interpersonal and professional relations with the patient; (b) interpersonal relationships with the family; and (c) relationships with health care delivery systems. The patient's identity is enhanced by appropriate physician concern for psychological factors: the patient's adaptation, coping, responding mechanisms, goals, life styles, and behavior. Negative physician factors include lack of skill and motivation in dealing with older people and negative attitudes toward aging. Family members can help to maintain patient's identity, providing emotional and economic support. Although the patients should be kept at home as long as possible, using community resources when a nursing home or other facility is advised by the physician, the patient's psychological as well as medical needs must be considered. Friendship intimacy, and activity must be provided to prevent mental and physical deterioration.—P. R. Sweet.

10442. Heinemann, Lothar; Precht, Klaus & Thiel, Ulrich. (Medizinische Klinik der Charité, Berlin, E Germany) **[Psychic problems associated with the**

treatment of terminal renal disease patients: III. Correlative factors of the cooperative behavior of patients in the process of therapy.] (Germ) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(Dec), Vol 26(12), 722-731.—Discusses psychosocial variables in the therapeutic cooperation between patient and kidney center. Data from 15 dialysis patients over 3 yrs are analyzed. Results show that patients who are less willing to cooperate frequently show unusual behavior patterns which are related to their lower IQs. It is concluded that this finding indicates the need for certain changes in attitudes toward such patients and in cooperation with them during the therapeutic process. (Russian summary) (45 ref)—*English summary*.

10443. Jekel, James F. (Yale U, Medical School) **Appraising programs for school-age parents.** *Journal of School Health*, 1975(May), Vol 45(5), 296-300.—Presents some reasons why programs for school-age parents are seldom evaluated, and indicates why the reasons are unsound. Necessary steps in program appraisal are discussed in specific detail.—*J. D. Pauker*.

10444. Kruger, W. Stanley. (US Dept of Health, Education, & Welfare, Office of Education, Washington, DC) **Education for parenthood and school-age parents.** *Journal of School Health*, 1975(May), Vol 45(5), 292-295.—Describes the characteristics of effective education for parenthood: it should be comprehensive, competency-based, experience-based, flexible, interdisciplinary, universal, continuous, cost-effective, and multi-goal. The activities of the US federally-funded Education for Parenthood Project are summarized.—*J. D. Pauker*.

10445. MaQ. N. & Deschamps, J.-P. **Child development indicators and public health.** *Carnets de l'Enfance*, 1975(Oct), No 32, 18-32.—Discusses (a) the importance of comparative longitudinal growth studies in providing information on relationships between youngsters and living conditions, (b) the development of these relationships, and (c) the application of this information to planning public health services. (23 ref)—*Z. M. Cantwell*.

10446. Menninger, W. Walter. **Caring as part of health care quality.** *JAMA: Journal of the American Medical Association*, 1975(Nov), Vol 234(8), 836-837.—Considers that the subjective aspects of "caring" are an important part of health care quality and should be understood in the context of the illness-recovery process and the physician-patient relationship. This aspect of health should be assessed as part of professional standards review and the patient's emotional response to health care should be assessed and the patient's emotional response to health care should be regarded as a valid aspect of treatment quality.

10447. Panther, Roger E. (U Southern California) **Effecting behavioral change in a medical care institution.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3321.

10448. Pickett, Ronald M. & Triggs, Thomas J. (Bolt Beranek & Newman, Inc, Cambridge, MA) **Human factors in health care.** Lexington, MA: D.C. Heath & Co, 1975. xxv, 382 p.—Presents 23 papers on human factors contributions to health care in the areas of (a) health system problems, (b) screening and diagnostic problems, and (c) patient management and treatment

problems. The design and use of medical systems and electrical and mechanical aids is also discussed. (231 ref)

10449. Raft, David et al. (U North Carolina, Medical School, Chapel Hill) **Inpatient and outpatient patterns of psychotropic drug prescribing by nonpsychiatrist physicians.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1309-1312.—Found that among 100 outpatients and 128 inpatients of a general hospital, minor tranquilizers were prescribed most often and with the least justification and that major tranquilizers were prescribed sparingly and by and large judiciously. Antidepressants were given less often than would be justified by the incidence of depressive illness among these patients. It is concluded that nonrecognition of depression in patients with somatic complaints and autonomic signs of depression contributed to this lack of treatment. (19 ref)—*Journal abstract*.

10450. Raimbault, A.-M. [Health in the villages.] (Span) *Carnets de l'Enfance*, 1975(Oct), No 32, 50-63.—Asserts that health services, as well as training of medical and paramedical personnel to provide them, are ill adapted to needs of the rural populations in Third World countries. A revision in services and training based on local participation is being developed currently.—*Z. M. Cantwell*.

10451. Rubin, Leonard D. (State U New York, Medical School, Stony Brook) **The burned female breast.** *New York State Journal of Medicine*, 1975(May), Vol 75(6), 865-869.—Discusses the endocrine, psychological, and scarring problems of the burned female breast. Scarring problems are divided into mild, moderate, and severe breast deformities. Surgical procedures for esthetic improvement are described. Particularly with the prepubescent female, scarring about the breast causes deep-seated emotional problems. The specific relationships between scarring of the breast and self-image are suggested.—*P. R. Sweet*.

10452. Sonis, Meyer & Sonis, Anne C. (U Pittsburgh) **Children, youth, and their gatekeepers.** *Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 95-113.—Considers the question of whether, as a result of the "gatekeepers" provided by the mental health service industries, we are now closer to providing an opportunity for all children and adolescents to thrive. Data relevant to answering this question are reviewed nationally and for the Pittsburgh area. Continuing needs are emphasized. (21 ref)—*Journal summary*.

Community Services & Mental Health Programs

10454. Adams, Paul L. (U Louisville, Medical School) **Children and paraservices of the community mental health centers.** *Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 18-31.—The "paraservice" ideology is discussed as central to the failure of community mental health centers to meet the needs of children. This ideology includes an emphasis on indirect service (e.g., consultation and education), delivery of service irrespective of skill, concentration on adults (i.e.,

direct service to parent instead of child), and lack of substantial evaluation of programs. (26 ref)—*R. M. Cohen.*

10455. Almond, Richard. (Collective Psychotherapy Ctr, Palo Alto, CA) *Issues in milieu treatment. Schizophrenia Bulletin*, 1975(Sum), No 13, 12-26.—Discusses milieu treatment as a set of considerations in the creation and operation of mental health settings that care for patients on a more-than-outpatient basis. Specific aspects of milieu programs—group therapy, community meetings, patient government, team treatment—are reviewed in relation to their place in the wider program. The milieu management of problems frequently encountered in schizophrenia are also discussed. It is argued that the best specific program for a given milieu is usually devised by the staff who will implement it. Attention is given to daily events and planning since they are seen as more critical than the arbitrary use of particular techniques of therapy.—*Journal summary.*

10456. Aviram, U. & Levav, I. (Tel Aviv U, Israel) *Psychiatric epidemiology in Israel: An analysis of community studies. Acta Psychiatrica Scandinavica*, 1975(Nov), Vol 52(5), 295-311.—Reviews all psychiatric surveys conducted thus far in Israel. A brief description of these 5 epidemiological studies is followed by an analysis which focuses on the objectives of the studies, their respective methodology, and data sources. Results obtained in the studies are discussed according to several parameters—the range of prevalence rates found, the differential distribution of rates among social groups, and the relationship found between psychopathology and several variables (e.g., age, country of origin, social class, and area of residence). Suggestions for further epidemiological research are included. (39 ref)—*Journal abstract.*

10457. Beach, William B. (Brattleboro Retreat, VT) *The child psychiatrist attempts to introduce community psychiatry into a state mental health program. Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 66-75.—Describes the many difficulties encountered by the clinician in an administrative role acting as change agent. Because of entrenched governmental patterns, change slowly, if at all.—*R. M. Cohen.*

10458. Berlin, Irving N. (U Washington, Medical School, Seattle) *Some models for reversing the myth of child treatment in community mental health centers. Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 76-94.—Notes that community mental health services tend to focus on the most disturbed members of their catchment areas—the adult mentally ill. In a few mental health centers, a commitment to children has resulted in early intervention and prevention services. Both treatment and intervention must be initiated very early. Poverty, malnutrition, and maternal depression account for many mental illnesses in the 1st few years of life. Collaboration between education, health, and mental health agencies is seen as crucial for the future of mental health of children. (51 ref)—*Journal summary.*

10459. Clements, Carl B. (U Alabama) *The school relations bureau: A program of police intervention. Criminal Justice & Behavior*, 1975(Dec), Vol 2(4), 358-371.—Describes a 3-yr project in which police teams

were assigned to schools. Program features included job-specific training, supervision and consultation by a full-time psychologist, and numerous informal police-youth contacts. Student and teacher acceptance was high, and most officers successfully moved into helping roles. (22 ref)

10460. Crespin, J. [The psychiatrist and the politics of geographical areas.] (Fren) *Encéphale*, 1975, NS Vol 1(3), 233-235.—Speculates that the objective of community psychiatry is not to impose a predetermined organization on a geographical area but to follow the needs of the resident population in devising methods of promoting mental health.—*K. J. Hartman.*

10461. Fields, Suzanne. *Asylum on the front porch: I. Foster communities for the mentally ill. Innovations*, 1974(Fal), Vol 1(4), 3-10.—Discusses alternatives to inpatient care and reports on one effective approach. In cooperation with the state hospital, 2 Missouri towns have served as foster towns for the mentally ill, in the tradition of Geel, Belgium. Results are promising and details of how to organize the program are given.—*S. E. Bowser.*

10495. Cocito, E.; Arata, P. Bevilacqua; Franzetti, F. & Pessi, P. A. (Ospedale Psichiatrico Provinciale, Genoa, Italy) [Psychosocial aspects of alcoholism: A study of admissions to the Genoa Quarto Psychiatric Hospital 1963-1973.] (Ital) *Neuropsichiatria*, 1974, Vol 30(1-2), 1-69.—Analyzed the annual hospitalization rate and length of stay of 1,403 males hospitalized for alcoholism.

32% of all admissions were for alcoholism, and 36% of the alcoholics came from the lower classes. The increase in alcoholism is related to population changes through analysis of census data. Also examined were sociological factors regarding birthplace, migratory trends, age at 1st admission, educational and occupational level, marital status, family relationships, antisocial behavior, and recidivism rates. In view of the socioeconomic and clinical harm done by alcoholism, more resolute intervention on the part of women authorities is recommended. (French & German summaries) (2 p ref)—*English summary*.

10496. Davis, Henry S. (Northwestern U) **The role of a crisis intervention treatment in the patient's recovery from elective surgery.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3490-3491.

10497. de Falco, Mary L. **The rehospitalization of discharged schizophrenic patients.** *Perspectives in Psychiatric Care*, 1975(Jul-Sep), Vol 13(3), 130-135. —Studied 19 chronic schizophrenics (12 men and 7 women) readmitted to a state mental hospital within 6 mo after discharge. Three were married, 5 were younger single patients, 9 were middle-aged and single, and 2 had suffered heterosexual loss. Situations and attitudes leading to rehospitalization of patients in each category are reported. In general, their experiences indicate that the absence of a person or persons to whom the patient could relate was the major factor in rehospitalization. The ability of these patients to extend themselves toward a friend, a family member, or a mental health worker was limited. Results of these observations emphasize the need for more extensive and intensive systems of aftercare for discharged schizophrenics.—*M. L. Hogan*.

10498. Don, Neville A. **Children in N.S.W. hospitals: Present and future.** *Mental Health in Australia*, 1974(Aug), Vol 1(2), 52-53. Conducted a survey at the Prince of Wales Hospital to determine the interest of mothers in staying with their young children (especially those under 3 yrs) if hospital facilities were available. Of 329 mothers questioned, almost 80% would like to remain with their children. The reason most often given for wishing to stay was "to help look after the child and give it security." It is strongly recommended that suitable accommodations be provided for mothers to stay in the hospital. This will involve solution of 2 other problems: re-education of the hospital medical and nursing staff to accept the desirability of such arrangements, and providing some occupation for the mothers which will utilize their time for the benefit of the child and the hospital.—*A. F. Vitiello*.

10499. Eaton, W. W. (Jewish General Hosp, Inst of Community & Family Psychiatry, Montreal, Canada) **Marital status and schizophrenia.** *Acta Psychiatrica Scandinavica*, 1975(Nov), Vol 52(5), 320-329. Reviews the finding of previous research that married persons are more likely to be hospitalized schizophrenics. Three interpretations of the finding are discussed: causation, selection, and differential utilization. A strategy to separate the 3 hypotheses is presented which uses data on rates of admission and duration of hospitalization and which concentrates on the widowed category. Data from the Maryland Psychiatric Case Register (1961-1968) were used to test the hypotheses. The

register provided a schizophrenic sample of 18,083. Evidence of selection and differential utilization was found, but none in favor of the causation hypothesis. It is shown that selection operates less powerfully in rural areas. (32 ref)—*Journal abstract*.

10500. Fields, Suzanne. **Asylum on the front porch: III. A medieval tradition.** *Innovations*, 1974(Fal), Vol 1(4), 15-16.—Presents a brief history of the therapeutic community of Geel, Belgium.—*S. E. Bowser*.

10501. Genthner, Robert W. & Graham, John R. (Eastern Kentucky U) **Effects of short-term public psychiatric hospitalization for both Black and White patients.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 118-124.—Studied the effects of short-term psychiatric hospitalization for 85 Black and 265 White patients (mean age, 38.6 yrs) by comparing them when they entered a short-term public hospital, when they were released, and in the community 18 mo following hospital release. A variety of indices, including Brief Psychiatric Rating Scale, Nurses' Observation Scale for Inpatient Evaluation, and MMPI scores, were used at the various comparison points. Although Blacks appeared to be more disturbed than Whites at admission, few differences were found at discharge or at the time of the 18-mo follow-up. Results indicate that both Black and White patients do not respond differently to short-term psychiatric hospitalization. (22 ref)—*Journal abstract*.

10502. Gervais, Robert H.; Barnard, George W.; Adams, John E. & Gordon, Richard E. (U Florida, Medical Coll) **Changing patterns of psychiatric inpatient care in a university general hospital.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1272-1275. —Explored the changing population characteristics of the psychiatric inpatient unit of a university general hospital from 1969 to 1974. It was found that patients are shortening their hospital stay and traveling fewer miles from their homes to the hospital. The average length of stay investigated decreased by nearly 2% from 38 days for the 247 patients admitted in 1969 to 13 days for the 540 inpatients in 1974. During the 1969-1974 period the average distance traveled per patient decreased from 105 to 62 miles. Increasing numbers of Blacks, men, and low-income persons are being treated. In addition, the percentage of patients with neuroses and transient situational disturbances has decreased, while the percentage of those with personality and behavior disorders has increased. The implications of these changes are discussed. *Journal abstract*.

10503. Grzesiak, Roy C. (Texas Tech U) **Ego correlates of behavior change: A psychodynamic-behavioral assessment of change in a token economy program.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4663.

10504. Hall, Beverly A. **Socializing hospitalized patients into the psychiatric sick role.** *Perspectives in Psychiatric Care*, 1975(Jul-Sep), Vol 13(3), 123-129. —Observed for a total of 35 hrs the reactions between staff and patients (6 adolescents, 20 adults) in a unit of a private psychiatric hospital, to note the behavior expected of patients (role content), the process by which these expectations were communicated and sanctioned (role socialization), and the problems occurring when staff or

patients moved out of their appropriate roles (role conflict). Staff expectations for patient behavior in group living (social role expectations) were definite and clearly communicated to the patients; expectations for patient participation in his therapy and that of others (therapeutic role expectations) were never stated to him in an organized manner, and sanctions began operating before the patient knew how he was expected to behave. The sanctioning system and its deficiencies are described. Three types of patient behavior causing role conflict are mentioned, and the occasions and causes of staff role conflicts are discussed.—*M. L. Hogan.*

10505. Hall, David & Pill, Roisin. (University Coll Swansea, Wales) **Social climate and ward atmosphere.** *Social Science & Medicine*, 1975(Oct), Vol 9(10), 529-534.—Argues that current usage of the terms "social climate" and "atmosphere" conceals 3 different approaches, each of which has its own strengths and weaknesses. In the first place, people commonly distinguish between organizational settings in terms of evaluative criteria, though often not explicit, and this "feeling tone" may be more closely related to individual behavior than organizational indices. The problem of different evaluations of the same social setting by different actors has largely been ignored in the more quantitative studies of organizational environments (the 2nd and 3rd approaches identified) which rely on either a checklist of variables or a large scale questionnaire response. Many of these studies are designed to differentiate between organizations, and their success in this respect necessitates a lesser emphasis being given to within-organization differences. It is argued that the effective evaluation of such studies must rest on a greater understanding than has been shown of the processes of attitude formation within and across organizations. At present the outlook is pessimistic for a rapprochement between the subjective and the so-called objective analysis of environmental interaction. (26 ref)—*Journal abstract.*

10508. Kymissis, Pavlos. (Athenian Inst of Anthropol, Athens, Greece) **Milieu specificity in medical practice: A study of sociopsychological variables concerning the husband and wife roles associated with hospitalization.** *International Mental Health Research Newsletter*, 1975(Fal), Vol 17(3), 7-8.—Studied differences in Greek perceptions of husband and wife roles relative to hospitalization. 30 hospitalized patients, 30 healthy control Ss matched by age and socioeconomic status, and Ss' spouses took the semiprojective Role Behavior Test. Results confirmed the 4 hypotheses: (a) Male patients, unlike healthy males, gave more status to themselves than to their spouses. (b) Male, unlike female, patients gave more love to themselves than to their spouses. (c) Female patients gave more status to spouses than did male patients. (d) Healthy males gave more status to spouses than did male patients. Greek male

status needs are threatened by hospitalization, and the resultant role discontinuity can hinder treatment efforts unless men regain some status by being allowed choices during treatment. Hospitalized Greek women experience less role discontinuity since their ordinary social status is more subordinate. To foster whole patient treatment, cultural needs should be studied and accommodated by those responsible for health care.—*C. A. Heikkinen.*

10510. Murphy, Michael J. & Zahm, David. (Indiana State U) **Effects of improved ward conditions and behavioral treatment of self-help skills.** *Mental Retardation*, 1975(Dec), Vol 13(6), 24-27.—Studied 3 groups ($n = 8$) of institutionalized severely and profoundly retarded males (mean CA, 9-14.5 yrs) to determine the effects of enhancement of the physical and social environment and behavior modification training upon acquisition of self-help skills. Two groups were placed on renovated modular living units with a resident-to-staff ratio of 8 to 1.5. One of these groups also received behavior modification training. The control group remained on a dayroom-dormitory ward with a resident-to-staff ratio of 30 to 1. Self-help skills were assessed before and after a 10-wk treatment period. Profoundly and severely retarded Ss showed significant increases in self-help skills after behavior modification training. Ss exposed to improved environment and staffing conditions did not change more than controls.—*Journal abstract.*

10511. Nogami, Norihiko; Kin, Choji; Makimoto, Katsuyoshi & Shinfuku, Naotaka. [A study of long-term patients in a mental hospital: I. Investigation of the total inpatient schizophrenic population at the Hizen National Mental Hospital.] (Japn) *Kyushu Neuro-psychiatry*, 1975, Vol 21(2), 125-134.—Classified all schizophrenic patients (276 males and 166 females) at the Hizen National Mental Hospital into 4 major groups on the basis of the duration of hospitalization. No correlation was found between the ages when the patients became ill and the duration of hospitalization, or between the number of readmissions per patient and the duration of hospitalization. A significant correlation did exist between the mode of payment and the duration of hospitalization. The number of readmissions among those patients who were hospitalized more than 11 yrs was significantly smaller than among those patients who had stayed less than 11 yrs, and the daily behavior patterns of the longer-term patients were significantly more predictable. Investigations of this type may throw light on the question of why the number of prolonged hospitalization has persistently increased in recent years. (English summary)—*S. Ashida.*

10516. Sanders, Jacquelyn. (U Chicago, Sonio Shankman Orthogenic School) **An autistic child in residential treatment.** *Reiss-Davis Clinic Bulletin*, 1975(Fal), Vol 12(2), 97-106.—Describes the case history and residential treatment of a boy 4½ yrs old at the Sonia Shankman Orthogenic School of the University of Chicago. The dynamics of the child's behavior are interpreted in the light of B. Bettelheim's work with autistic children. The interpersonal relationships of the facility are related to the positive treatment effects.—G. R. Alley.

10517. Shea, Richard J. (U South Carolina) **Position discrimination using vibration as reinforcement with profoundly retarded subjects.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4675-4676.

10518. Stewart, David W. **The future of the state mental hospital.** *Perspectives in Psychiatric Care*, 1975(Jul-Sep), Vol 13(3), 120-122.—Contends that although recent developments in mental health care have reduced the population of state mental hospitals, they can still perform useful functions. Their ability to provide structured long-term care should be strengthened by changes in admission policies which exclude marginally functional patients who can benefit from treatment at community centers. The research and teaching functions of the state hospital can be emphasized by administrative changes providing for greater control of treatments and more comprehensive record keeping. A 3rd function of the state hospital is the care and treatment of patients who can benefit by being isolated from their normal surroundings and the usual pressures of work, family, and social relationships.—M. L. Hogan.

10520. Westphal, Carl R. (U North Dakota) **Variables affecting the efficacy of a token economy.** *Mental Retardation*, 1975(Dec), Vol 13(6), 32-34. A study investigated variables affecting the efficacy of a token economy used with 16 16-24 yr old institutionalized mentally retarded boys exhibiting disruptive behaviors. IQ range was 25-48. Four independent variables, staff:resident ratio, consistency of reinforcement, immediacy of reinforcement, and location of tokens, were manipulated to determine their effect on the number of tokens earned and spent, and on the frequency of disruptive behavior. Appropriate manipulation of the variables investigated, coupled with increased staff-to-

resident ratio, improved the efficacy of the token economy system.—*Journal abstract.*

Rehabilitation & Penology

10521. Cull, John G. & Hardy, Richard E. (Virginia Commonwealth U) **Rehabilitation facility approaches in severe disabilities.** Springfield, IL: Charles C Thomas, 1975. xviii, 329 p.—Presents an overview of some of the major concerns faced by rehabilitation facility administrators in dealing with clients with various severe disabilities. The 14 collected papers focus on types of facilities and services, and approaches to working with both emotionally disturbed and physically disabled clients.

10522. Equi, Peter J. (Auburn U) **The influence of psychological variables on motivation for physical rehabilitation.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3493.

10523. Favez-Boutonier, J. (U Paris VII, France) [Daniel Lagache as criminologist.] (Fren) *Psychologie Française*, 1974(Dec), Vol 19(4), 283-286.—Explicates Daniel Lagache's continuing interest in criminal psychopathology and emphasizes that the adjustment of the criminal to reality is more apparent than real. The poor adjustment of the conduct of criminals to reality, their "magical" side, is related to an unreal aspect which underlines the role of the imaginary in their personality dynamics. Lagache insists on recognizing the importance in criminals, as well as in certain neurotics, of the persistence of an ideal-self, an archaic identification to fanciful omnipotent personages. In a normal development, the subject accepts an ideal self, a source of identification with an ideal, but one compatible with reality.—K. J. Hartman.

10524. Fields, Suzanne. **Asylum on the front porch: II. Community life for the mentally retarded.** *Innovations*, 1974(Fal), Vol 1(4), 11-14.—Maintains that many mentally retarded people, when provided with appropriate rehabilitative opportunities, can develop much more self-reliance and independence than used to be thought possible. One institution has found that by carefully selecting a neighborhood and by providing retarded residents with a job skill and social education courses, many were able to make the transition to the community. In the past decade over 1,000 people have been returned to community living by the programs reported.—S. E. Bowser.

10528. Jansson, Diane P. **Return to society: Problematic features of the re-entry process.**

Perspectives in Psychiatric Care, 1975(Jul-Sep), Vol 13(3), 136-142.—Discusses the problems of the individual who has been isolated from his social system, especially in an institution such as a prison or psychiatric hospital, and is returning to it with a "deviant identity." The 1st phase of re-entry may be euphoria; this is not an appropriate time for intervention because euphoria may include denial of the approaching problems of re-entry. When the re-entrant begins to encounter the practical difficulties of adjustment, anger at himself, at others, and at the system may develop. At this period intervention can be decisively helpful. Other reactions are a sense of powerlessness, fear of rejection, feelings of guilt, and regression. The prior institutionalization, with its bureaucratic determination of activities, may make it difficult for the re-entrant to make independent decisions. Creation of sustained intimacy has also become difficult. It is suggested that the solution of all these problems is helped by involvement with a reference group in addition to the development of individual relationships. (15 ref)—*M. L. Hogan*.

10529. **Jesness, Carl F.** (California Youth Authority, Sacramento) **Comparative effectiveness of behavior modification and transactional programs for delinquents.** *Journal of Consulting & Clinical Psychology*, 1975(Dec), Vol 43(6), 759-779.—The California Youth Center Research Project studied the effectiveness of two different treatment programs with 983 15-17 yr old adjudicated delinquents assigned to 2 institutions, one of whose programs was based on transactional analysis and the other on the principles of behavior modification. Results suggest that institutions can be run so that most residents change for the better. Improvement on psychological measures favored the transactional analysis program; the behavior ratings slightly favored the behavioral program. Parole follow-up showed no differences in the revocation rates of the 2 programs, but Ss from both were doing significantly better than comparison groups of the same age assigned to other institutions. (40 ref)—*Journal abstract*.

It is argued that since individual capabilities depend upon many internal and external conditions, they should be evaluated only after individual, on-the-spot guidance and training and by long-time observations, and that a tightly organized program of training, therapy, and guidance is therefore required. Rehabilitation of such patients is limited less by their specific performances than by their social dependence, so that provision should be made not only for appropriate working conditions, but also for institu-

tionally organized living conditions. (Russian summary) —*English summary*.

Drug & Alcohol Rehabilitation

10539. **Altamura, A. C.** (U Milan, Italy) **Therapeutic attempts with lithium in young drug addicts.** *Acta Psychiatrica Scandinavica*, 1975(Nov), Vol 52(5), 312-319.—Administered lithium to 20 17-28 yr old opiate addicts on the hypothesis that drug addiction may be due to "masked depression." Only 9 Ss took the lithium carbonate tablets for more than a few weeks; during this period they seemed to abstain from taking opiates. After 1 yr, all Ss were off lithium, and most again took opiates. Due to lack of cooperation by Ss, observations can neither confirm nor refute the hypothesis. Results indicate that psychological and socio-environmental factors make trials on drug treatment of opiate addicts almost impossible to carry out. (26 ref) —*Journal abstract*.

10540. **Braun, Michael C.** (U Southern California) **Heroin: Phenomenological aspects of its use and group treatment.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3487-3488.

10541. **Ciminero, Anthony R.; Doleys, Daniel M. & Davidson, Robert S.** (U Georgia) **Free-operant avoidance of alcohol.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1975(Oct), Vol 6(3), 242-245.—Conducted an

experimental analysis of the effects of electric shock on free-operant avoidance of alcohol with a single-S design. The 48-yr-old male S made no avoidance responses during the baseline condition, where no shock was delivered. By removing and reinstating the shock contingency, it was found that the shock did exert some control over the avoidance behavior. However, after S was conditioned to avoid 100% of the shock-alcohol, he continued to avoid all of the available alcohol even when there was no threat of shock. This 100% avoidance of alcohol in the experimental setting has been observed in follow-up sessions up to 6 mo after conditioning, and there appears to be generalization of the conditioning effects to the S's everyday environment.—*Journal abstract*.

10545. Imhof, John E. & Fink, Richard L. (North Shore University Hosp, Long Island, NY) **N.E.T.-W.O.R.C.: A response to crisis.** *Drug Forum*, 1975, Vol 4(3), 187-198.—Describes an informal association of 14 drug programs with the town government and the major hospital serving the catchment area of the Town of North Hempstead, New York. It is suggested that the association is a model for all drug programs which seek to establish meaningful relationships with neighboring community-based education and treatment facilities, providing the communication necessary for delivery of comprehensive and quality services for the drug-involved individual. (19 ref)

10546. Jackman, Jay M. (Westside Community Mental Health Ctr, San Francisco, CA) **Drug abuse: Barriers to care: Continuity of care.** *Drug Forum*, 1975, Vol 4(3), 209-216. Workers in drug abuse programs recognize that between the provider of treatment services and the recipient—the drug abuser—are a series of barriers to care that make continuity of care far more difficult than in most other fields of medical or psychiatric practice. There are 4 areas that require special attention: (a) the criminalization of drug abuse and addiction, (b) the consequent absence of strong open medical concern with addiction and abuse, (c) the development of pharmaceutical technology and advertising, and (d) the mass media's role in encouraging use and abuse. It is considered that the first 2 issues are the central determinants of the present state of affairs related to drug abuse. The last 2 issues are more speculative but more fundamental and of critical importance in beginning to curb drug abuse in the high risk youth population.—*Journal abstract*.

10549. Maddux, James F. & Desmond, David P. (U Texas, Health Science Ctr, San Antonio) **Reliability and validity of information from chronic heroin users.** *Journal of Psychiatric Research*, 1975(Aug), Vol 12(2), 87-95.—Describes the extent of agreement between 2 sources of information on selected life history data of 34 chronic heroin users. High percentages of exact or approximate agreement (71% or more) were found on 9 of the 12 life history variables studied (e.g., birth year, military service, age of 1st arrest, and age of 1st opioid drug use). A noteworthy systematic discrepancy was found on 2 variables: number of treatment interactions and number of arrests. The Ss underreported both frequency of treatment and of arrest. The following conditions seemed to affect reliability of information: refinement of measurement; misunderstanding of terms; elapsed time; repeated use; consequences of disclosure; the psychological defense of denial; and features of the interview. Results of this study and of most previous studies indicate that chronic heroin users often give reliable and valid life history information. Uncritical acceptance of their statements, however, seems as unwise as uncritical rejection. (17 ref)—J. Sorokac.

PROFESSIONAL PERSONNEL AND PROFESSIONAL ISSUES

10558. Baird, John C. (Case Western Reserve U) **Social workers' orientations toward community mental health concepts.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5319-5320.

10559. Bates, Erica. (U New South Wales, Behavioral Science School of Health Administration, Kensington, Australia) **Some thoughts on the 1973 Congress of the World Federation of Mental Health.** *Mental Health in Australia*, 1974(Aug), Vol 1(2), 55-57.—Describes and criticizes the setting and procedures of the Congress. Suggestions for improving future meetings include a more informal location, a less rigid format, and division of those attending into smaller groups, based on their interests, for lectures and discussions.—*A. F. Vitiello.*

10560. Baum, O. Eugene. (Medical Coll of Pennsylvania) **Why a psychoanalytic core in psychiatric education?** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1281-1285.—Presents arguments for a historical psychogenic approach to psychiatric education with a focus on psychodynamic understanding of behavior. It is posited that psychoanalysis provides a developmental psychology and a body of clinical data that are uniquely suited to this purpose. This focus is meant to be complemented by consideration of genetic, social, cultural, learning, and biophysiological forces. Trends in psychiatric education are related to the changing identity of the psychiatrist and the history of the discipline. *Journal abstract.*

10561. Bennett, Virginia C. & Bardon, Jack I. (Rutgers State U, Graduate School of Applied & Professional Psychology) **Law, professional practice, and professional organizations: Where do we go from here?** *Journal of School Psychology*, 1975(Win), Vol 13(4), 349-358.—Discusses the ethical dilemmas faced by the practicing school psychologist in view of the plethora of laws that dictate procedures, policies, and instrumentation. The function of professional organizations, both national and state, is described as (a) anticipating legislation, (b) developing political impact, (c) affecting existing laws, and (d) affecting proposed legislation. Coordination of

efforts among various groups and development of political expertise is urged as a way to approach issues of concern to both psychologists and their clients.—*Journal abstract.*

10562. Bersoff, Donald N. (Yale U, Law School) **Professional ethics and legal responsibilities: On the horns of a dilemma.** *Journal of School Psychology*, 1975(Win), Vol 13(4), 359-376.—Examines how reliance by practicing school psychologists on codes of ethics may lead to legal liability, emphasizing 5 areas: (a) parent's right to access to records; (b) informed consent and the right to privacy in research and assessment; (c) confidentiality of client-clinician communication; (d) parental refusal of proffered educational services; and (e) treatment of minors without parental consent. Current statutory and case law is reviewed to show how the legislature and judiciary view professionals' responsibility in these areas. A discussion of why codes of ethics fail to provide adequate support for psychologists in meeting problems encountered in their everyday functioning is presented, and some remedial measures for improving the current codes governing school psychology are proposed. (29 ref)—*Journal abstract.*

10573. Fischer, Joel. (U Hawaii, School of Social Work) **Training for effective therapeutic service.** *Psychotherapy: Theory, Research & Practice*, 1975(Spring), Vol 12(1), 118-123.—Tested the effectiveness of 3 educational experiences in training graduate students in social work. Group 1 received direct specific training in 3 essentials of successful practice—empathy, warmth, and genuineness (EGW)—during 7 mo, for a total of 44 hrs. Group 2 spent the same amount of time with the instructor, but received no specific training in EWG. Group 3 had no contact with the instructor except during the administration of tests. Pre- and posttests showed that Group 1 students had the highest change scores on 9-point scales of EWG. Questionnaires completed by supervisors showed that these students were also more able to establish meaningful relationships with clients and were more self-actualized. They were not significantly more effective, nor did they receive higher grades; grades were negatively correlated with empathy ratings. It is concluded that even years of intellectual educational programs may not be adequate preparation for professional practice.—C. McCreary.

10574. Freudenberg, Herbert J. **The staff burn-out syndrome in alternative institutions.** *Psychotherapy: Theory, Research & Practice*, 1975(Spring), Vol 12(1), 73-82.—Burn-out is defined as failure or exhaustion because of excessive demands on energy, strength, or resources. Its occurrence among the staff of alternative self-help (free clinic) institutions is discussed: causes, characteristics, and variations. Early signs and symptoms are described, measures to prevent burn-out are suggested, and how to help the burnt-out person is discussed.—C. McCreary.

10575. Geller, Jesse D. & Berzins, Juris I. (Yale U) **A-B distinction in a sample of prominent psychotherapists.** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 77-82.—Asked 134 prominent psychotherapists, psychoanalysts, and behavior therapists to fill out the Whitehorn-Betz A-B therapist scale and comment on their possible differential effectiveness in treating schizoid-schizophrenic vs neurotic patients. Psychometric results of the 95 responses disclosed that their scale scores were reliable, distributed comparably to other therapists and collegiate males, and denotative of 2 correlated interest-aptitude dimensions. Professionals typed as A's or B's showed a greater reluctance to accept the research-generated implications of their A-B status than Ss whose scores fell into neither of these categories. Although data did not provide strong evidence for a relationship between A-B scale scores and theoretical orientation, the distribution of scores did suggest that B therapists desire and seek more complex

and exciting sensory-cognitive inputs during therapy hours than A therapists. (30 ref)—*Journal abstract.*

10576. Gorlow, Leon. (Pennsylvania State U) **The school psychologist as expert witness in due process hearings.** *Journal of School Psychology*, 1975(Win), Vol 13(4), 311-316.—Considers that as a consequence of the Consent Agreement reached between the Pennsylvania Association for Retarded Children and the Commonwealth of Pennsylvania in the United States District Court, school psychologists are finding themselves increasingly in the role of expert witness in due process hearings. A number of problems regarding the witness behavior of psychologists in these hearings are identified, and some recommendations and resolutions for these problems are offered.—*Journal abstract.*

10577. Halleck, Seymour L. (U North Carolina, Medical School, Chapel Hill) **Discussion of "Socially reinforced obsessing."** *Journal of Consulting & Clinical Psychology*, 1976(Feb), Vol 44(1), 146-147.—Argues that the primary ethical question raised by R. J. Cohen's and F. J. Smith's (see PA, Vol 55:Issue 5) report of a woman Christian Scientist who became obsessed with thoughts of disease is whether her treatment succeeded at the expense of her religious convictions. Issues related to the political aspects of psychotherapy, whether the therapists imposed their own values on the patient during treatment, and the nonneutrality of any attempt to change troubling behaviors are discussed.

10583. Kamin, Leon J. (Princeton U) **Social and legal consequences of I.Q. tests as classification instruments. Some warnings from our past.** *Journal of School Psychology*, 1975(Win), Vol 13(4), 317-323.—Argues that social science instruments are not neutral, and that the concepts they are imbedded in, the aspects of reality they

enable use to use, all have social and political consequences. That school psychologists need to pay close attention to the sociopolitical implications of their assessment instruments is illustrated through a brief history of the use and misuse of the concept of intelligence in the US during the first third of this century. (17 ref)—*Journal abstract*.

10584. Kandler, Henry; Plutchik, Robert; Conte, Hope & Siegel, Barbara. (Albert Einstein Coll of Medicine, Yeshiva U) **Prediction of performance of psychiatric residents: A three-year follow-up study.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1286-1290. —Compared supervisors' global and specific item ratings of 17 psychiatric residents' performance in each of 3 yrs of training with ratings of these applicants prior to their admission to the program. Although preadmission ratings had almost no predictive power, there were certain items that consistently discriminated between residents rated high and those rated low by supervisors in each year of training. It is concluded that initial interviews of those selected cannot predict their subsequent performance. It is therefore recommended that a major portion of these interviews be devoted to an exchange of information between the applicant and the department.—*Journal abstract*.

10585. Karlsruher, Averil E. (U Maine) **The non-professional as a psychotherapeutic agent: An empirical investigation of the influence of supervision, expectation and facilitative conditions on his therapeutic effectiveness.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6213.

10586. Kimmel, Ellen. (U South Florida) **Proceedings of the Twenty-first Annual Meeting of the Southeastern Psychological Association.** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 1.

10587. Kuriloff, Peter. (U Pennsylvania, Graduate School of Education) **Law, educational reform, and the school psychologist.** *Journal of School Psychology*, 1975(Win), Vol 13(4), 335-348.—Argues that the 2 areas of reform which most affect school psychologists are the extension of the right to a public education to previously discriminated against and excluded groups and the extension of the protection of the Bill of Rights to all schoolchildren. The potential impact of these areas on the role of the school psychologist is suggested by preliminary findings on one such reform, the right of retarded children to an appropriate education and the guarantee of that right through the provision of procedural due process. Any response to the reform by school psychologists will involve risks and opportunities which must be carefully weighed if a wise choice is to be made from the point of view of both children and the profession.—*Journal abstract*.

10588. Lanning, Theodore R. & Gabriel, H. Paul. (New York U, Medical School) **Use of tandem teams in child mental health training of medical students and pediatric house staff.** *Journal of the American Academy of Child Psychiatry*, 1975(Win), Vol 14(1), 142-149. —Describes tandem teams involving psychiatrists, psychologists, psychiatric social workers, recreation workers, and a remedial teacher. The system provides mental health training relevant to the future activities of these

trainees as general pediatricians or in child-oriented professions.—*Journal summary*.

10589. Laska, Eugene M. & Bank, Rheta (Eds). (Rockland Research Ctr, Information Sciences Div, Orangeburg, NY) **Safeguarding psychiatric privacy: Computer systems and their uses.** New York, NY: John Wiley & Sons, 1975. xv, 452 p.—Presents a collection of papers on the legal and social issues in the use of a large computerized information system (Multi-State Information System) in mental health programs and solutions developed for safeguarding computerized psychiatric data. Computers are discussed as clinical instruments in diagnosis, treatment, and monitoring; as administrative instruments in planning, resource allocation, evaluation, and peer review; as research tools; and as libraries. (251 ref)

10590. Lenny, Vaughn. **Preventive psychiatry from the point of view of the general practitioner.** *Mental Health in Australia*, 1974(Aug), Vol 1(2), 61-66.—Notes that the general practitioner concerned about preventive psychiatry will deal chiefly with the mental health of the individual patient rather than that of the community. Because many patients accept him more easily than a psychiatrist, he can use his influence in many instances where organic, psychological, or social factors threaten to interfere with mental health. Four areas are specified in which he can be helpful to his patients: (a) in knowledge of organic disorders which may have psychiatric sequelae, in recognizing them, and in early intervention; (b) in protecting the mental health of children, with particular emphasis on maintaining the integrity of the family structure; (c) in giving psychological support during crisis situations; and (d) in referring a patient to a mental health specialist when this seems advisable. A list of 7 occasions when such referral is appropriate is given.—A. F. Vitiello.

10605. Sharfstein, Steven S. & Magnas, Howard L. (NIMH, Alcohol, Drug Abuse & Mental Health Administration, Rockville, MD) **Insuring intensive psychotherapy.** *American Journal of Psychiatry*, 1975(Dec), Vol 132(12), 1252-1256. Many private insurance programs that currently cover mental disorders eliminate intensive psychotherapies, including psychoanalysis, from the range of treatment options by placing restrictions on the number of visits covered. The economics of intensive psychotherapy coverage are examined, and data are presented indicating that relatively few people in an insurance program with comprehensive mental health benefits use high cost forms of psychotherapy. It is concluded that insurance coverage of intensive psychotherapy is feasible, but it is suggested that further study of the goals of intensive treatment, potential demand for it, and the supply of qualified practitioners is needed. 10606. Sharma, Motilal & Gupta, G. P. (U Baroda, India) **Prognostic value of intermediate marks for**

medical success: An exploratory study. *Indian Journal of Applied Psychology*, 1973(Jul), Vol 10(2), 55-60.—Examined the relationship between intermediate grades and subsequent success in medical school for 40 male and 12 female Indian medical students. Results indicate that success in medical school was not dependent upon intermediate grades. It is recommended that medical schools should not rely solely on academic achievement when selecting students.—R. P. Butler.

10607. Sjødahl, Lars. [Changes in attitudes and personality during nursing training.] (Swed) *Pedagogisk-Psykologiska Problem*, 1975(Sep), No 275, 27 p.—Studied changes in attitudes and personality during nursing training, using the cross-section method. The investigation included 290 student nurses distributed over terms 1, 3, and 5. Significant differences between the 3 terms in attitudes and personality factors were demonstrated, using analysis of variance. The differences were described by discriminant analysis.—*Journal abstract.*

10608. Sloan, William & Levitt, LeRoy P. **Patient workers.** *Mental Retardation*, 1975(Dec), Vol 13(6), 22-23.—Examines the impact of legislation curtailing the use of patient workers in institutions. The experience in Illinois indicates that discontinuance of patient employment in institutional maintenance work is professionally sound, administratively feasible, and fiscally economical.

10609. Star, Barbara G. (Ohio State U) **An experimental study of the impact of videotape self-image confrontation of the self perceptions of social work students.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 2), 5324.

10610. Stempler, Benjamin L. (Bureau of Child Welfare, Family Services Div, Bronx, NY) **Effects of aversive racism on White social work students.** *Social Casework*, 1975(Oct), Vol 56(8), 460-467.—Contends that re-education in nonracial terms will be painful but necessary if social work students are to achieve competence. Fostering multiracialism in practice and policy is suggested in order to influence society. (15 ref)—M. W. Linn.

10611. Stewart, Nancy P. & Viney, Linda L. (Child Guidance Clinic, Leederville, Australia) **Role of the psychologist in social welfare.** *Australian Psychologist*, 1975(Jul), Vol 10(2), 163-178. Discusses the general role of the psychologist in social welfare, specifically, his contributions in the areas of research and evaluation, psychological knowledge, psychological assessment, psychological intervention, education, social policy planning, administration, and recommendations concerning the future role of psychologists. It is suggested that the expertise of psychologists is only now beginning to be applied appropriately in this field.—J. C. Laguerre.

10612. Strupp, Hans H. (Vanderbilt U) **On failing one's patient.** *Psychotherapy: Theory, Research & Practice*, 1975(Spring), Vol 12(1), 39-41.—Focuses on the "truth in marketing" aspect of therapy; i.e., the client has a right to know what he is buying and the therapist has a responsibility to tell him explicitly. The psychotherapist fails his client if he does not make an effort to specify in advance what is being offered.—C. McCreary.

10613. Thelmer, R. Kaye & Ruppert, Omer J. **Special education litigation and school psychology.** *Journal of School Psychology*, 1975(Winter), Vol 13(4), 323-334.—Discusses

cusses the implications of legal actions which affect the practice of school psychology in the US. The procedure of litigation was first initiated in 1967, and several landmark cases since then have provided prototypes for subsequent cases which concerned the rights of handicapped children. As a result of the gross injustice that existed in the education and treatment of handicapped children, there were over 30 lawsuits filed on their behalf. Education and treatment of the handicapped child, long viewed as a charitable endeavor, must now be considered as an inalienable right not to be denied. Although the courts have been forced to decide upon some of the critical issues regarding exceptional children, the implementation will be more effective and efficient if the education profession itself assumes the responsibility. —*Journal abstract.*

10626. Dickerson, LaVerne T. (New York U) **The relationship of the Youth Conservation Corps experience to selected dimensions of adolescents' self-concept.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6096-6097.

10627. Francis, John B. (State U New York, Buffalo) **The learning society: Participant evaluation, American Association for Higher Education regional program: 1973. Catalog of Selected Documents in Psychology**, 1975(Sum), Vol 5, 268.

10628. Grisé, Phillipa. (Massey U, Palmerston North, New Zealand) **The contribution of a private church school to moral development.** *Delta*, 1974(Nov), No 15, 30-35.—Describes the social structure of a private college for girls and the resulting effect on their moral development. Rigid, punitive rules demanding conformity and dependence tend to elicit retaliation by the students. It is suggested that moral development is being inhibited rather than promoted.—*M. H. Apt.*

10629. Helsabeck, Fred. (Michigan State U) **An analysis of difficulties in abstract syllogistic reasoning.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4697.

10630. Hillocks, George. (U Chicago, Graduate School of Education) **Reading, natural learning, and the interpretation of literature. Theory Into Practice**, 1975(Jun), Vol 14(3), 156-165.—Discusses research results which indicate that literary interpretation involves skills such as inferential reading in addition to oral reading ability and "natural learning" of the language of ordinary discourse. Alternative methods for teaching these skills are described and evaluated.—*H. P. Cole.*

10631. Johns, Dawn. (Massey U, Palmerston North, New Zealand) **The secondary school as total institution: Ethnic variations.** *Delta*, 1974(Nov), No 15, 24-28.—Describes the deculturizing effects of the secondary school on the Maori minority. Middle-class European values are dominant while Maori values are ignored or denigrated; as a result, Maori children show serious maladjustment problems. Since attendance is compulsory, the school exerts a powerful influence over the behavior of the children.—*M. H. Apt.*

10632. Klein, Luella. (Emory U, Medical School) **Models of comprehensive services: Regular school-based.** *Journal of School Health*, 1975(May), Vol 45(5), 271-273.—Discusses the specious reasons given for dismissing pregnant students from regular schools. Reasons for retaining pregnant students in regular schools are presented and conditions are listed which help keep them in school. A regular-school-based comprehensive service program is described.—*J. D. Pauker.*

10633. Klumb, Roger W. (U Wisconsin) **The effects of monitoring pupil performance and two incentive treatments for teachers on pupils' reading skill development and teachers' attitudes.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6518-6519.

10634. Mazure, Joseph. [The amphibology of the concept of operation in educational psychology.] (Fren) *Archives de Psychologie*, 1973(Win), Vol 42(166), 271-286.—Discusses the concept of "operation" as used in mathematics as well as in psychology and everyday speech. It is suggested that the multiple usages can confuse application of the concept in education. Piaget's concept of child development incorporates the notion of operation, and the operational theory of intelligence is acknowledged world-wide. However, the theory is not properly taken into consideration when teaching methods are brought up to date. (German summary) (28 ref)—*English summary.*

10635. Michael, Price M. (U Cincinnati) **Racial composition and organizational climate of elementary schools.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6315-6316.

10636. Nickel, Horst. (U Dusseldorf, W Germany) [The relevance of developmental psychology for education and instruction: Critical evaluation of some hypotheses according to more recent research.] (Germ) *Psychologie in Erziehung und Unterricht*, 1973, Vol 20(4), 209-222.—Largely genetically determined stage theories (e.g., Gesell, Piaget) are examined in terms of recent research up to 1973 which points to a gradual increase in skills or changes in attitudes. While warning against a neglect of biological determinants or the uncritical acceptance of B. S. Bloom (1964), it is concluded that the teacher has to find out by trial and error what can be taught. Willingness to learn may be largest with a moderate discrepancy between stage of knowledge and the goal to be achieved. The need for a more intensive training of future teachers of all levels and an interdisciplinary cooperation between biological, educational, and social sciences is emphasized. More psychology should be integrated into the training of teachers. (English abstract) (63 ref)—*W. O. Horn.*

10637. O'Hara, Martin et al. (McGill U, Faculty of Education) **Creative memory: Five suggestions for categorization of adult learning.** *Adult Education*, 1975(Fal), Vol 26(1), 32-52.—The 1st section of this article centers around problems of translating into current research terms adult learning in the affective domain (art, poetry). The next urges experimentation with developing in the adult learner something akin to "historical method" in regard to his own learning processes. A 3rd section arises as a question from 1 researcher's comparison of his clinical methodology as psychiatrist with his more participatory procedures as adult educator. The next section conceives of some of Jung's unfinished questions as being handed on to P. Freire (1973): those which bear upon determination of procedures valid for adult development. The 5th underlines the primacy of those experiences and questions which liberate, for adults, their own resources—implying that progress by researchers must have similar roots. Creative memory is thus a key to authors' different approaches to the categorization in adult-learning research. (15 ref)—*Journal abstract.*

10638. Roache, Beverly. (Massey U, Palmerston North, New Zealand) **The private school as total institution: Parental culture.** *Delta*, 1974(Nov), No 15, 18-23.—The influence of the private school on the behavior and values of the parents is viewed as analogous to the power exercised by mental and penal institutions over their inmates. Evidence is provided to support the hypothesis that parental values promote and maintain a powerful, authoritarian, elite group, which rewards loyalty to the status quo.—*M. H. Apt.*

10643. Stanley, Norman M. (Ohio State U) **Factors related to decisions made by high school graduates concerning post-high school education.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 5023-5024.

10644. Start, K. B. (U Melbourne, Australia) **Mirror, Mirror: Reality for the researcher.** *American Educational Research Journal*, 1975(Sum), Vol 12(3), 323-336.—Contents that educational research has little influence on educational practice because of (a) the time required to perform research which would answer practical questions, and (b) ineffective research dissemination. The general tendency to require research to be congruent with the policies of society is questioned. It is suggested that research variables should be of the type which lead to specific interventions, so that public attention can be drawn to the importance of research.—*E. J. Mason.*

10645. Washington, Vivian E. **Models of comprehensive service: Special school-based.** *Journal of School Health*, 1975(May), Vol 45(5), 274-277.—Lists the strengths and weaknesses of special schools for the pregnant teenager, and describes 4 special-school-based programs.—*J. D. Pauker.*

Educational Administration & Personnel & Training

10646. Aloia, Gregory F. (U California, School of Education, Riverside) **Effects of physical stigmata and labels on judgments of subnormality by preservice teachers.** *Mental Retardation*, 1975(Dec), Vol 13(6), 17-21.—102 randomly selected full-time students in a teacher training program participated in a study to determine the influence that the label "mentally retarded" and physical attractiveness had on individual judgments of subnormality. Ss examined a series of photographs of children that had been selected along a continuum of physical attractiveness with the 2 extremes of the physically attractive and the physically unattractive photographs being utilized in the design. Analysis of data indicated that the presence of physical stigmata in the unattractive photographs influenced judgments of subnormality. Results fail to support the hypothesis that a label appended to a photograph could influence judgments of subnormality. The impact of the physical appearance and teacher judgments on the educational outcome of the child are discussed. (19 ref)—*Journal abstract.*

10647. Arciniega, Tomas A. (San Diego State U) **Why the recent Rodriguez, Serrano, and similar court actions aren't enough: A critique of public education.** *Journal of Instructional Psychology*, 1975(Fal), Vol 2(4), 2-13.—Argues that school systems are functioning too well and too consistently with the type of societal structure they have been designed to promote and maintain. The legitimacy of educational systems which distribute benefits in an unequal manner are questioned. The sociocultural dimensions of school organizations and the traditional response of public education toward

bicultural students are discussed. Special attention is given to conditions affecting Chicanos. Public education is seen having shifted the blame for the failure of schools to meet the needs of bicultural minority children to the children themselves. 5 specific changes are recommended.—*R. Tomasko.*

10658. Childers, William C. (U Georgia) **An evaluation of the effectiveness of a human relations training model using in-class student teacher observation and interaction analysis.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4947.

10659. Cleveland, Robert L. (Syracuse U) **A study of the relationships among teacher job satisfaction, teacher morale and categories of teacher-faculty group membership.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6512-6513.

10660. Cooperman, Bryna R. (Ball State U) **A study of the effects of urban laboratory experiences on the attitudes and self concepts of undergraduate students.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4950.
10661. Cummins, Margaret E. (U Akron) **Changing the verbal behavior patterns of elementary classroom teachers through self-evaluation.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4951.
10662. Daiton, William B. (George Peabody Coll for Teachers) **Exploring the expectancy effects phenomenon: A study of the perpetuation of teachers' expectations of pupils.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3459-3460.
10663. Eiden, John A. (U North Dakota) **The relationship between self actualization and selected learning experiences of elementary education majors enrolled in the University of North Dakota's Center for Teaching and Learning.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4954.
10664. Ellett, Lowell E. & Smith, Earl P. (Clover Hill High School, Chesterfield, VA) **Improving performance of classroom teachers through videotaping and self-evaluation.** *AV Communication Review*, 1975(Fal), Vol 23(3), 277-288.—40 public school teachers were videotaped in their classrooms 8 times, at 2-wk intervals. Following each videotaping, 20 teachers watched their performances on tape and answered a specially designed self-evaluation questionnaire while 20 teachers did not use the self-evaluation instrument and did not view their taped performances unless they asked to do so. Teaching performance, as judged by 16 educators from outside the school system, improved significantly among those who viewed the videotapes and used the self-evaluation instrument.—D. E. Anderson.
10665. Fenker, Richard M. (Texas Christian U) **The evaluation of university faculty and administrators: A case study.** *Journal of Higher Education*, 1975(Nov-Dec), Vol 46(6), 665-686.—Discusses a project to recognize and reward "excellence" in all aspects of administrator and faculty behavior. The project also aims to reduce the arbitrariness of the decision-making processes associated with promotions, tenure, and raises by making the goals and reward structure more explicit. Instruments developed for teacher evaluation, colleague evaluation (faculty), administrator evaluation, and professional staff evaluation are described, and data gathered at various stages of instrument evaluation and program development are detailed.—*Journal abstract*.
10666. Finkbeiner, Paul K. (U Southern California) **The effectiveness of affective training in changing interpersonal behavior of preservice teachers.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6495-6496.
10667. Firth, James L. (Arizona State U) **An investigation of the effectiveness of the Bessell-Palomares inservice training program on teacher attitudes.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6382.
10668. Garwood, Barbara A. (Kent State U) **The moral maturity level of the community college teacher and its relationship to classroom behavior as measured by student ratings.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4625.
10669. George, James E. (North Texas State U) **Cognition, attitude, and the level of commitment of supportive professional special education personnel regarding Plan A special education in Texas.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4924.
10670. Gross, David E. & Kaplan, Robert M. (American Inst for Research, Palo Alto, CA) **Teacher attitudes toward implementing career education in the classroom.** *Journal of Educational Research*, 1975(Nov), Vol 69(3), 106-108.—Questionnaire data show that teachers generally expressed positive attitudes toward career education, although some confusion about the characteristics of career education was found. Teachers of younger children felt less well informed about career education than about any other program, and felt that career education was less relevant to their classroom activity than did teachers in the upper grades.
10671. Halverson, Claire B. (U Wisconsin) **Evaluating change in educator's consciousness of racism: Analysis of a human relations training program.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6498.
10672. Harasymiw, Stefan J. & Horne, Marcia D. (Northwestern U) **Integration of handicapped children: Its effect on teacher attitudes.** *Education*, 1975(Win), Vol 96(2), 153-158.—Investigated the effect of a program designed to prepare teachers for integration of handicapped students into the regular class. 352 teachers from integrated (E) and nonintegrated (C) schools were administered an attitudinal instrument. Findings indicate that the E teachers had more favorable attitudes. No significant differences were found between the attitudes of males and females nor between the number of special education courses taken and favorable attitudes. Younger teachers evidenced significantly more favorable attitudes, and a partial relationship was noted between the year of degree confirmation and attitudes. (19 ref) —*Journal abstract*.
10673. Harris, Walter J. (Syracuse U) **Changes in the verbal teaching styles of special education student teachers in relation to the verbal teaching styles of their cooperating teachers.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6483-6484.
10674. Hartlage, Lawrence C. & Nichols, Fenwick. (Medical Coll of Georgia, Augusta) **Approaches to two methodological problems in student evaluation in instruction.** *Journal of Instructional Psychology*, 1975(Fal), Vol 2(4), 36-39. Two methodological problems involved in student evaluation of instruction include separation of ratings of instructors from the courses they teach, and the relevance of student ratings to objective criteria of amount learned. The 1st problem was studied by having 125 2nd-yr medical students independently rate instructors and subjects in a course taught by 20 instructors. The 2nd study compared student gain in factual knowledge with 164 students' evaluations of instructors. Results indicate that students' ratings of instructors were strongly related to knowledge gained and that students can evaluate instructors and subject matter taught independently of each other. —*Journal abstract*.

10675. Hatch, Eric J. (Pennsylvania State U) An empirical study of a teacher training program in empathic responsiveness and democratic decision making. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6447.

inservice training and student group counseling. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6503.

10696. Povey, R. M. (Christ Church Coll, Canterbury, England) **A comparison of three methods of evaluating teaching performance in a college of education.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 279-285.—196 Teacher's Certificate students were assessed on their penultimate teaching practice by 67 supervising tutors. Students were divided into 3 comparable groups and were supervised by 3 comparable groups of paired tutors. After 3½ wks each student was graded (A-E) by 2 tutors independently. Each group of tutors used 1 of 3 assessment methods: *Analytic*, involving reference to uniform criteria in the context of a graphic-style rating scale; *Profile*, involving a rating scale with a less tightly organized procedure; and *Global*, in which tutors made no reference to uniformly agreed criteria. Results suggest that the Analytic method represented a clear improvement over the other 2 methods in a number of respects.—*Journal abstract*.

striking skill. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6429-6430.

10727. Barnow, Burt S. (U Wisconsin) The effects of Head Start and socioeconomic status on cognitive development of disadvantaged children. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6196-6197.

10728. Bassett, Ronald E. (Florida State U) Effect of training in the use of behavioral objectives and knowledge of results on student performance in a mastery learning course in speech communication. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6440.

10729. Beacon, Robert. (U Southern California) The effect of selected review procedures used in instructional media on immediate and delayed recall. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6440-6441.

10730. Beloff, John. (U Edinburgh, Scotland) The study of the paranormal as an educative experience. *Parapsychology Review*, 1975(Nov-Dec), Vol 6(6), 8-11.—Considers justifications for teaching parapsychology in a university. It is concluded that while students are interested in the subject and there is some relevance to other fields, the most important reason for including it in a liberal education curriculum is that it teaches an attitude of uncertainty regarding the world. Individuals must simultaneously be open to the fantastic, yet hypercritical of every claim; they must be aware of dishonesty, yet mentally strong enough to avoid falling into an easy cynicism.—P. F. Grim.

10731. Boshier, Roger. (U British Columbia, Faculty of Education, Canada) Behavior modification and contingency management in a graduate adult education program. *Adult Education*, 1975(Fal), Vol 26(1), 16-31.—Randomly assigned 20 participants in a graduate adult education research course to a control or experimental group. Experimental Ss received a reinforcer for making correct responses in structured discussions concerning course content. After 7 sessions experimental Ss entered the control condition, while former control Ss received the reinforcer. At the end of each session participants rated aspects of the sessions and their learning on 5 Likert-type scales and completed questionnaires indicating the extent of their study behavior in the week preceding each session. Experimental Ss made more frequent "correct" responses, rated the sessions more positively, and manifested a greater number of desired study behaviors than controls. New experimental Ss showed an increment in their rate of responding and study behaviors. Possible contaminating effects of expectancy and other extraneous variables are discussed. It is suggested that adult educators utilize contingency management because of its power, simplicity, and utility. (21 ref)—*Journal abstract*.

10732. Braza, Jerry & Kreuter, Marshall W. (U Utah, Coll of Health) A comparison of experiential and traditional learning models in studying health problems of the poor. *Journal of School Health*, 1975(Jun), Vol 45(6), 353-355.—Conducted a study comparing 2 types of learning model. 15 undergraduates studied health problems of the poor experientially, through immersion in the community; 8 others studied the same problems

vicariously, in the classroom. There was equal knowledge acquisition in the 2 groups, but immersion produced more attitude change. There is a brief discussion of control variables, the value of anecdotal information, and the sensitivity of measuring instruments.—J. D. Pauker.

10736. Cagney, Margaret A. (Syracuse U) *A comparison of the listening comprehension associated with language experience stories presented in standard English and Negro nonstandard English among kindergarten and first grade speakers of Negro nonstandard English*. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6248.

10737. Clara, Louise P. (Memphis State U) *The relationship of selected student characteristics to achievement with the learning package in secondary English classes*. *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4980.

10738. Close, Darwin B. (Ohio State U, Columbus) *Contract teaching: Education by objectives*. *Journal of Instructional Psychology*, 1975(Fal), Vol 2(4), 19-27. —Considers that contract teaching is increasing motivation to learn by involving the student in the classroom decision-making process. This method is based on the classical educational idea of step-by-step learning and is compared, in the present paper, to management by objectives. Aspects of contracting considered include mutual goal setting, a clear statement of objectives, a harmony of objectives, student effort and risk, and faculty effort. An example of a grade contract for a university course is given.—R. Tomasko.

10739. Cohen, Alice S. (Adelphi U) *Oral reading errors of first grade children taught by a code emphasis approach*. *Reading Research Quarterly*, 1974-1975, Vol 10(4), 616-650. Investigated errors made in the last 8 mo of 1st grade by 24 boys and 26 girls from 2 heterogeneously grouped classes, who were instructed in reading using the phonic method. Reading errors were categorized by type and by the extent to which the error and the written word had common letters. At first, No Response errors were predominant. Good readers rapidly moved to Nonsense errors, however, and then to Word Substitution errors. Poor readers showed a gradual increase in Nonsense errors which paralleled an increase in Word Substitutions. Poor readers tended to continue to use first and last letter clues. Poor readers' strategies were less systematic. A 2nd presentation showed similar trends. (French & Spanish abstracts) (37 ref)—E. J. Mason

10740. Coldevin, Gary O. (Concordia U, Montreal, Canada) *Spaced, massed, and summary treatments as review strategies for ITV production*. *AV Communication Review*, 1975(Fal), Vol 23(3), 289-303.—Nine male and 11 female 7th graders viewed instructional television programs on the effects of forest fires and were tested for cognitive knowledge of and attitude toward the subject. The programs varied in the way review materials were presented: (a) Information was repeated at the end of conceptual units (summary treatment). (b) Information was repeated after each subunit within a conceptual unit (massed treatment). (c) Information repeated after each subunit was preceded by a 5-sec pause (spaced treatment). (d) No repetition was included. Results indicate that the spaced treatment was most effective, and all 3 review treatments were more effective than viewing the program without review segments.—D. E. Anderson.

10765. Hohmann, Charles. (Training & Development Ctr, High/Scope Educational Research Foundation, Ypsilanti, MI) **Finding order in difference: Seriation in elementary curricula.** *High/Scope (Annual Report)*, 1975(Aug), Report 1974-75, 14-16.—Summarizes the importance of including seriation (the process of arranging objects or ideas in order according to variation in one of their properties) in the repertoire of children's academic experiences. The purpose of including seriation in elementary curricula is to develop, refine, and use a process of reasoning that is applicable in various circumstances, both in the school classroom and in "the world". To use the ability of children and adults to seriate enables them to find order in the relations of difference within a multitude of environmental experiences.—*J. S. Garnett*.

10766. Hosen, Ron. **The value and design of an effective social science curriculum.** *Education*, 1975(Win), Vol 96(2), 129-140.—Proposes that the purpose of an effective social science curriculum should be to maximize individual and social benefits. Individual benefits are those derived from acquiring an understand-

ing of current events reported by the mass media and from understanding the workings of human systems of interaction requiring skill. Social benefits include transmission of a view of authority as having a simple social function rather than being an end in itself; and the production of citizens who will engage in rational political action. The curriculum should be based on the student's potential intuitive understanding of human behavior with additional constructs built on this understanding. A reflective instructional strategy used in 5 experiments with undergraduates proved effective in increasing achievement, in altering attitudes, and maintaining interest.—*Journal abstract.*

(Hebrew U, Jerusalem, Israel) **The committed: Preliminary reflections on the impact of the kibbutz socialization pattern on adolescents.** *British Journal of Sociology*, 1975(Sep), Vol 26(3), 343-353.—Discusses possible relationships between the structural characteristics of kibbutz educational systems and the resulting psychological characteristics of kibbutzim children. The strong collectivist values of 2nd and 3rd generation kibbutzniks is said to result from the emphasis in kibbutzim schools on symmetrical-egalitarian relations and on self-government. Development of the ability to adapt to different situations and to cope with current difficulties can be traced to self-definitions of kibbutz society as self-sufficient and pioneering. Teaching techniques emphasize self sufficiency. Finally, the tendency to strive for high achievement in collective and individual fields is associated with emphasis on the "superiority" of the kibbutz as a way of life, bound to a strong sense of social obligations. The kibbutz system fosters norms of continual self-improvement in a competitive atmosphere. (20 ref).—R. P. Abeles.

10785. Nagaraja, Jaya. **Parent-teacher monograph series: Sex education: How we impart the knowledge and when.** *Child Psychiatry Quarterly*, 1975(Jul), Vol 8(3), 8-14.—Discusses sex education of children and adolescents as a delicate but normal subject which should be treated with care and dexterity by parents and teachers. The importance of parental attitudes toward sex in general and toward their own sexuality, the kinds of friends with whom the individual associates, the school atmosphere, the ethical, moral, and religious background, and the kind of information about sex which is

available, are considered important variables in shaping the individual's attitude toward and knowledge of human sexuality.—J. S. Garnett.

10786. Neville, Mary H. (U Leeds, England) **Effectiveness of rate of aural message on reading and listening.** *Educational Research*, 1975(Nov), Vol 18(1), 37-43.—Divided 118 11-12 yr olds of normal reading ability by school classes into 2 groups. One group read 3 passages of equivalent reading difficulty while paced aurally by recordings of the passages at 3 different rates; the other group listened to these recordings. Scores on comprehension questions showed no difference in difficulty for the listening group relative to the rate of the message. In the reading group, scores were higher the slower the rate of the aural pacer, and this effect was found for 18 remedial readers of the same chronological age. Boys in all groups performed significantly better than girls.—*Journal abstract*.

10804. Sanacore, Joseph. (Suffolk County Community Coll, NY) **Reading self-concept: Assessment and enhancement.** *Reading Teacher*, 1975(Nov), Vol 29(2), 164-168.—Discusses ways to evaluate and enhance students' self-esteem in the reading program. Educators should provide a teaching atmosphere which will lessen criticism, hostility, and ridicule, and will stimulate tolerance, encouragement, and acceptance. (24 ref)—P. D. Leedy.

10805. Schmalt, Heinz-Dieter. (Ruhr U Bochum, Psychologisches Inst, W Germany) **[Independence training and various aspects of achievement motivation.]** (Germ) *Zeitschrift für Entwicklungspsychologie und Pädagogische Psychologie*, 1975, Vol 7(1), 24-37.—Examined theoretical propositions concerning the development of the achievement motive by using the Achievement Motivation Grid (a semi-projective measure) and the TAT to test 35 3rd-grade Ss. As expected, relationships between optimally timed independence training and motive strength became closer when stimulus pictures in the motivational measure evoked autonomous individual reference norms for performance. Results

confirmed a prediction concerning components of the fear-of-failure motive: that affective anticipations of the social consequences of failure are weak if demands for independence have been made too late. However, late independence training did not appear to foster a poor self-concept of ability. (30 ref)—*R. Scott.*

10806. **Schneider, John E.** (George Peabody Coll for Teachers) **The effects of a season of competition on the aggressive responses of intercollegiate football players.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6434.

10807. **Schulz von Thun, Friedemann; Göbel, Gerhild & Tausch, Reinhard.** (U Hamburg, Psychological Inst, W Germany) [Influence of improved textbooks on understanding and retention of different groups of students.] (Germ) *Psychologie in Erziehung und Unterricht*, 1973, Vol 20(4), 223-234.—Parts of 4 textbooks in geography, physics, and biology were improved by 4 experts in regard to simplicity, arrangement, conciseness, and additional interesting information. These and the original texts were rated independently on these 4 dimensions by 10 specially trained graduate students of psychology. The revised texts were rated as significantly or very significantly improved in $\frac{1}{2}$ of 16 comparisons. 514 7th and 8th graders read alternately from the original and optimized texts distributed at random and answered a motivation questionnaire and content questions. Verbal ability and reasoning were tested with subtests 1-3 of the LPS (W. O. Horn). Results indicate that Ss learned significantly more from all revised texts, regardless of their intelligence level. There was significantly greater enjoyment and feeling of success in regard to 2 texts. Ss of a higher socioeconomic background profited more from 2 of the optimized texts. (English abstract)—*W. O. Horn.*

10808. **Schwartz, Elaine & Sheff, Alice.** (Half Hollow Hills Public Schools, NY) **Student involvement in questioning for comprehension.** *Reading Teacher*, 1975(Nov), Vol 29(2), 150-154.—Describes how disabled readers practice thinking and reasoning in response to carefully structured questions, which stimulate them to become active participants in thinking through many of the issues presented in reading. Good readers need structured & questioning to help them focus their thinking. Questioning fosters involvement by the student who is asked to shift his attention from one aspect to another of the meaning of the passage.—*P. D. Leedy.*

10809. **Searfoss, Lyndon W.** (Syracuse U) **A comparison of two strategies designed to teach basic decoding skills to selected fourth grade readers.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6275-6276.

10810. **Selman, Robert L. & Lieberman, Marcus.** (Harvard U, Graduate School of Education) **Moral education in the primary grades: An evaluation of a developmental curriculum.** *Journal of Educational Psychology*, 1975(Oct), Vol 67(5), 712-716.—Evaluated the effects of a semistructured group discussion approach to moral education on the level of usage of the concept of moral intentionality. Ss were 68 2nd graders, half from middle and half from lower socioeconomic status school districts. The medium of sound filmstrips to present moral dilemmas was employed during which teachers

encouraged discussion and debate among Ss. Results indicate that Ss in the experimental condition showed higher level usage of the concept of moral intentionality on post- and follow-up testing than did a control group. However, due to the small number of classrooms involved in the study, results could not be definitively attributed to program effects rather than to teacher effects, and conclusions must be interpreted within the context of a pilot evaluation research.—*Journal abstract.*

10813. **Slavin, Robert E.** **Teams-Games-Tournament: A student team approach to teaching adolescents with special emotional and behavioral needs.** *Center for Social Organization of Schools Report, Johns Hopkins U*, 1975(Nov), No 206, 23 p.—Describes the use of Teams-Games-Tournament (TGT), an instructional technique involving student teams and learning games, as an alternative classroom structure for children with special needs. A study was conducted in which TGT and individualized instruction were compared, using 39 7th-9th graders in a school for adolescents of normal intelligence who had problems with human relationships and academic tasks. Results confirm hypotheses that TGT would exceed individualized instruction on social connectedness, pro-academic peer norms, frequency of peer tutoring, and percent of time on task. A 5-mo followup showed that former TGT students distributed among 6 new classes were still interacting with their peers both on and off task more than control students. However, TGT students were off task more than control students at the time of the followup observation.—*Journal abstract.*

10814. **Smith, Nila B.** **Cultural dialects: Current problems and solutions.** *Reading Teacher*, 1975(Nov), Vol 29(2), 137-141.—Discusses the problems of teaching reading to speakers of various dialects (e.g., Blacks, Spanish-Americans, and Appalachians) and mentions procedures that have been found useful in dealing with them. Teachers should not expect immediate perfection. It takes time for children to overcome the difficulty of transition from dialect to standard English. (18 ref)—*P. D. Leedy.*

10820. Tausch, Reinhard; Bodiker, Marie-Luise & Schwab, Reinhold. (U Hamburg, Psychologische Inst III, W Germany) [The improvement of spelling using simple technical training methods.] (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(5), 303-309. —Teachers in 19 Hamburg schools selected 139 students from Grades 4-7 with low grades in spelling. These were tested for spelling, reasoning, concentration, extraversion, and neuroticism. The low achievers had to write frequently used words by transferring them to the other side of a printed list or from tape-recorded dictation. After writing 14-18 words they were checked for correctness. The achievement gap between the poor spellers and 114 normal controls was significantly reduced, even for words not used in the training. The increase was not related to sex, previous grades, intelligence, or concentration. The students preferred taped dictation to copying. (English summary)—W. O. Horn.

10843. Curtis, Rebecca C.; Zanna, Mark P. & Campbell, Woodrow W. (Adelphi U) **Sex, fear of success, and the perceptions and performance of law school students.** *American Educational Research Journal*, 1975(Sum), Vol 12(3), 287-297. An investigation of the effects of sex and fear of success upon academically-related perceptions and performance of law school students resulted in main effects for both sex and fear of success, but no interactions. Findings characteristic of women included fewer responses in class and greater reluctance to tell others if they made successful grades. Findings characteristic of respondents high in fear of success included lower law aptitude scores and more frequent failure to volunteer answers in class when desiring to do so. No behaviors peculiar to women high in fear of success were obtained. Results indicate that women may be more likely than men to fear rejection, but are not more likely to fear success.—*Journal abstracts*.

10844. Dalsimer, Katherine. (Columbia U, Columbia Coll. Counseling Service) **Fear of academic success in adolescent girls.** *Journal of the American Academy of Child Psychiatry*, 1975(Aut), Vol 14(4), 719-76. Fifty-five stories written by 44 females and 44 males in grades 8-12 were evaluated for indicators of fear of success. Data indicate that fear of success was more prominent among females than males. Further analysis revealed an

increase with age. Examples of the stories are presented and speculations offered as to the sources of the reported differences.—R. M. Cohen.

10861. Kučerová, Lydie. (Pedagogicko-psychologická poradna, Prague, Czechoslovakia) **[Relationship between intellectual abilities and educational success of girls and boys during their first school years.]** (Czech) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(1), 71-78.—214 2nd and 3rd graders (111 girls and 103 boys) were given the verbal subtests of the WISC and the Goodenough Draw-a-Man Test as measures of intellectual ability. School grades in language (Czech) and arithmetic were taken as measures of educational success. In Grade 2, boys and girls were alike in intellectual ability, but girls scored significantly higher in educational success; boys showed a moderate correlation between verbal IQ scores (of the WISC) and educational success. An explanation is offered for these sex differences in the 2nd grade. In Grade 3, boys and girls were almost alike in educational success, but boys scored significantly higher on verbal IQ; for 3rd-grade girls there was a significant correlation between verbal IQ scores and educational success, and for 3rd-grade boys the correlation was even stronger.—*English summary*.

10878. Thompson, G. Brian. (Monash U, Faculty of Education, Melbourne, Australia) **Sex differences in**

reading attainments. *Educational Research*, 1975(Nov), Vol 18(1), 16-23.—Reviews the evidence on sex differences in reading attainment of English-speaking children. A developmental trend was found whereby a larger proportion of boys than girls make a slow beginning at learning to read, but by age 10 population differences are no longer apparent. It is considered important that teachers and parents be aware that a boy under 10 yrs who is making slow progress may be an instance of this developmental phenomenon which does not imply any pathology (e.g., dyslexia). Findings on sex differences in prereading skills and hypotheses about the origin of sex differences in reading attainment are examined. The hypotheses of feminine bias of the school environment, of differential maturation of cerebral structures, and of differential exposure to the printed word, are evaluated. (55 ref)—*Journal abstract*.

10879. Thomson, M. (U Aston, Birmingham, England) **Laterality and reading attainment.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 317-321.—Investigated the effect of laterality (handedness, eyedness, footedness, earedness) on the reading attainment levels of 60 children with reading ages 18 mo or more below their chronological ages (mean age = 18 yrs). These Ss were compared with a control group of the same size who had average or above average reading ages. Reading ages for all Ss were measured by the Schonell Graded Reading Test. Both groups completed a laterality questionnaire relating to different aspects of perception and handedness. Inconsistencies in the different aspects of laterality were found, making connections between laterality and attainment more complex than has previously been assumed. However, showing a complete set of unilateral characteristics was still the best predictor of reading attainment, while using either hand, being "left-eared," and mixtures of eye and hand usage were associated with retarded reading (19 ref)—*Journal abstract*.

10888. Barnett, David W. & Zucker, Karl B. (Logansport Public Schools, IN) **The others-concept and friendly and cooperative behavior in children.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 495-501.—Explored the predictability of friendly, cooperative behavior of 24 4th, 5th, and 7th graders over a 5-wk period. The basis for the predictions was the children's *others-concept*, as measured by the Paired Hands Test. Structured observations of groups of Ss working together on tasks were made during 5 consecutive 15-min weekly sessions. Observations were obtained by recording each session and categorizing verbal statements as to their task-relatedness and friendliness. In 3 tasks out of 5 high *others-concept* Ss showed a higher frequency and greater proportion of task-related and friendly behaviors. Tasks which best differentiated high and low *others-concept* Ss were those which seemed to be the most challenging and exciting, and which called for the highest degree of group cooperation.—*Journal abstract*.

10899. Diab, Lutfy N. & Prothro, E. Terry. (American U, Beirut, Lebanon) Changes in authoritarianism associated with university residence in the Arab Middle East. *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 155-162.—Administered the California F (Fascism) Scale to 73 Arab undergraduates, both at the beginning of their freshman year and toward the end of their senior year, to assess changes in authoritarianism. In line with previous studies, there was a significant decrease in degree of authoritarianism from freshman to senior. Two interrelated factors were associated with a greater decrease in authoritarianism: initially moderately high F scores and initially responding in Arabic. The shift from responding in Arabic as a freshman to responding in English as a senior, associated with decrease in authoritarianism, suggested the possibility of either underlying shifts in thinking and ideology in the S as a whole or superficial nonintegrated shifts restricted to the specific language through which the S happened to be responding. The latter possibility raises doubts about the practice sometimes followed in cross-cultural research whereby the requirement of stimulus-equivalence is considered as met through translation-equivalence. (15 ref)—*Journal abstract*.

10900. Dilendik, John R. (Moravian Coll) Teacher-student attitude similarity and information retention. *American Educational Research Journal*, 1975(Sum), Vol 12(3), 405-414.—Investigated the relationship between the similarity in attitudes of teachers and students and student retention of nonsense polysyllables. Data from

161 students in 5 junior and 5 senior high schools were analyzed. Attitude similarity was assessed using the method suggested by D. Byrne and R. Rahmeyer (1965) (see PA, Vol 40:2389) and D. Byrne (1971). Two videotapes were prepared in which a teacher expressed either a liberal or a conservative viewpoint toward war, God, the draft, grading, discipline, smoking, drinking, birth control, careers for women, and welfare. Ss were shown 1 of the 2 tapes 7-10 days after having been administered the attitude scale. The same teacher then discussed the "Latuk" Indians. The name "Latuk" and 10 other terms were nonsense polysyllables. Cognitive retention was measured after this lecture and 4 wks later. It was found that students who agreed with the videotaped teacher tended to retain more of the nonsense terms than those who disagreed. Results are explained using a classical conditioning rationale. (35 ref)—E. J. Mason.

10901. Dillon, Stephen V. (U Denver) Schools with failure and alienation. *Journal of School Health*, 1975(Jun), Vol 45(6), 324-326.—Discusses how traditional evaluation procedures, particularly those based on expectations that a proportion of the students will fail, promote feelings of impotence and generate experiences of alienation. "Schools without failure" allow children to continue their preschool developmental successes by setting up learning objectives which are geared to each individual's competencies.—J. D. Pauker.

10902. Dinkmeyer, Don; Carlson, Jon & Koval, Calista. (Communication & Motivation Training Inst, Coral Springs, FL) Increasing the teacher's understanding of students' self-concepts. *Education*, 1975(Win), Vol 96(2), 180-183.—Posits that the elementary school years are not only a significant but a crucial time for the teacher to help the child develop positive attitudes toward himself, others, and society. Adult response patterns are then in their most rapid period of formulation; as the child matures, his attitudes will stabilize and change will be more difficult. The attitude toward self is seen as most important, affecting interrelationships, achievement, and mental health. The schools are seen to be in an excellent position to influence the child's self-concept because the child can be observed interacting within his peer group. A need is seen, therefore, for teachers to focus on understanding the child and aiding him in understanding and accepting himself. Techniques for attaining these goals are presented (e.g., teacher openness, pupil diaries, and incomplete sentence forms). (27 ref)—P. O'Brien.

determining variables. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6514-6515.

10906. Eaglestein, A. Solomon. (Hebrew U, School of Education, Jerusalem, Israel) **The social acceptance of blind high school students in an integrated school.** *New Outlook for the Blind*, 1975(Dec), Vol 69(10), 447-451.—Investigated the academic standing and social acceptance of 9 blind students as compared with 155 sighted students in a Jerusalem high school. It was found that the blind Ss' grades were average and that the Ss were well-integrated into the social framework of their classes. However, there was evidence that as length of exposure to the blind students increased, their acceptance by sighted students decreased.—*Journal abstract*.

10907. Gruber, Joseph J. (U Kentucky) **A directional analysis of peer status scores in a racially integrated residential high school for the disadvantaged.** *American Corrective Therapy Journal*, 1975(Sep-Oct), Vol 29(5), 158-164.—Studied the effects of certain goals of an integrated residential school to see if they were reflected in peer status scores, and the extent to which these sociometric choices were related to the stability of the home environment. The entire population of 91 students 14-17 yrs old who had been in residence at least 1 yr was used for the study. Results indicate that females were more willing to cross racial lines than males. Black males tended to reject Whites. The only significant interaction between race and home background was in the male scores. White males from a stable home environment awarded higher mean scores than Whites from an unstable home background. Type of home environment was not significant with Blacks. *D. R. Marino*.

10908. Gustilo, Teodorico O. (Pennsylvania State U) **The effects of person-environment interactions upon vocational course achievement and vocational course satisfaction.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 5012-5013.

10909. Haberkorn, Floyd E. (U New Mexico) **Teacher-child language interactions as affected by changes in the behavior of selected children following the training of their mothers.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6355.

10911. Hamer, Joseph W. (U Georgia) **The university married student: An overview of the subculture and a model for positive adjustment.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6382-6383.

10912. Hebert, Ralph H. (Florida State U) **Differential undergraduate responses to scales on contemporary values.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6383.

10913. Hendry, L. B. & Douglass, Lesley. (U Aberdeen, Scotland) **University students: Attainment and sport.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 299-306.—The extent to which 230 university students enrolled in a 1-yr psychology course were "active" (i.e., competitively or recreatively involved) in sports or "nonparticipant" was compared with their scores on measures of personality, attitude, social class, sex, previous school involvement in sports, and attainment in university course work. Active students

were, on average, more stable and extraverted, more likely to have been active in sports at school, and were equally successful in course-work as nonparticipant students. (16 ref)—*Journal abstract*.

10914. Hennen, Malinda A. (U Georgia) **The administration of positive stimuli to children of varying achievement levels.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4869-4870.

10915. Hinze, Brent M. (Utah State U) **A follow-up of decision changes from the ACT profile for freshmen at USU.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6195.

10916. Horn, J. M.; Turner, R. G. & Davis, Linda S. (U Texas, Austin) **Personality differences between both intended and actual social sciences and engineering majors.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 293-298.—Used the Maudsley Personality Inventory to examine personality differences between 139 social science and 328 engineering upper-classmen. Social science majors scored significantly higher than the engineers on the neuroticism scale. A 2nd study of 454 high school seniors showed that those who indicated a preference for a social science major also scored significantly higher on neuroticism than high school seniors who wanted to major in engineering. Results are interpreted to mean that social science and engineering attract different types of people. The overrepresentation of engineers in radical political groups is discussed from the point of view of the personality factors influencing the choice of majors.—*Journal abstract*.

10917. Hutchins, Robert C. (Pennsylvania State U) **Attitudes of male gang members related to innovative education.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6304-6305.

10918. Jamerson, Reginald E. (U Massachusetts) **A study of self-concept of art and academic ability of secondary students with emphasis on the Black perspective.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6261-6262.

10919. Jelinek, Milena M. & Brittan, Elaine M. **Multiracial education: I. Inter-ethnic friendship patterns.** *Educational Research*, 1975(Nov), Vol 18(1), 44-53.—Reports results of a national study of 2nd- and 4th-yr junior and 2nd- and 4th-yr secondary school pupils in England. Findings concern the low level of interethnic friendship even at age 8+, the decline of this in the older age groups, and the extent to which desired friendship included a higher proportion of children of other ethnic groups.

10920. Jennings, James E. (Michigan State U) **Perceptual cognitive styles and personality variables relating to students' program changes at inner-city community college.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6412.

10921. Koskenniemi, Matti; Karma, Kai & Martikainen, Marja **DPA Helsinki system for describing instructional processes: Manual.** *Research Bulletin, Institute of Education U Helsinki*, 1974(Nov), No 42, 29 p.—Presents a taxonomy for the classification of interactions in instructional situations. Areas covered include cognitive content, socio-affective properties.

modes of teacher influence, emotional climate of the class, authority relationships, pupil participation, and goal-related behavior. The importance of student teachers having a knowledge of what is essential within the instructional process is emphasized. This knowledge should provide goal-appropriate evaluation of each instructional period and help the student teachers develop their ability to direct the instructional process.—R. Tomasko.

10922. Lake, John H. (Rutgers State U) **The influence of wait-time on the verbal dimension of student inquiry behavior.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6476.

10924. LoVette, Otis K. (Oklahoma State U) **A correlational investigation of the self-concepts of fifth and sixth grade teachers and their students.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6263-6264.

10925. Lynch, Jerry. (Pennsylvania State U) **Equal opportunity or lip service? Sex-role stereotyping in the schools.** *Elementary School Journal*, 1975(Oct), Vol 76(1), 20-23.—Discusses the general and persistent sexual stereotyping of students. This stereotyping of children's behavior, conditioned by sex discrimination, begins early in the child's life and continues throughout school. Girls are taught to be obedient, docile, and dependent; boys are encouraged to be aggressive, active, achieving, and independent. These sex-role discriminations are perpetuated by teacher attitudes in the classroom, in physical education programs, and in the counseling processes. The stereotypes are portrayed in children's literature and are even reflected in the separate norms for the sexes in standardized tests, such as the Strong Vocational Interest Blank. They have an effect on the motivations of boys and girls with respect to occupational choices.—A. J. Ter Keurst.

10926. Marquis, Robert J. (Rutgers State U) **The relationships between student alienation, teacher control orientation, and school instructional organization.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6264-6265 34(10-A).

10928. McQuade, Margaret R. (St John's U) **Perceived parental attitudes and their relationship to vocational choice problems of college students.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3503.

10929. Meyer, Wulf-Uwe & Butzkamm, Alois. (Ruhr U Bochum, Psychologisches Inst, W Germany) **[Assessing causal factors in arithmetic grades: I. Teacher's explanations.]** (Germ) *Zeitschrift für Entwicklungspsychologie und Pädagogische Psychologie*, 1975, Vol 7(1), 53-66.—Asked 10 teachers which causal factors they considered responsible for the latest grade in mathematics of each pupil in their classes, and the relative

importance of each factor. All teachers attributed grades chiefly to internal factors. The pupil's ability was given the greatest weight (50%), pupil effort was next in importance (30%), and other causal factors had only small influence. Possible reasons for between-teacher variations in factor weighting are discussed.—R. Scott.

10930. Moore, Nelwyn B. (U Texas, Austin) **Continuity of child development instruction related to student attitude toward young children.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4482-4483.

10931. Nettles, David H. (U Alabama) **A descriptive study of high school dropouts in an Alabama rural school system.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6365-6366.

10932. Newby, Janet. (Massey U, Palmerston North, New Zealand) **Sex roles, schools and life chances: The labelling approach.** *Delta*, 1974(Nov), No 15, 36-41.—Compares the number of male and female students enrolled in professional programs and the percentages of enrollment by sex in arts and in science courses. The number of females studying for a profession is far smaller than the number of males, except in courses in education, where females outnumber males. Female enrollment in the arts is high, but is low in the sciences. These findings suggest that traditional sex roles, ascribed by society, often result in the denial of academic and vocational opportunities to females. As society undergoes change, education must change and provide these opportunities.—M. H. Apt.

10933. Ober, Steven L. (U Wisconsin) **The relationship between teachers' characteristics and students' academic achievement in a middle class community.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6501-6502.

10934. Odom, Norine S. (U Alabama) **Disadvantaged Black elementary school children's self-concepts and attitudes toward school versus their teachers' perceptions of the children's self-concepts and attitudes toward school.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6268.

10935. Oliver, Mary J. (Oklahoma State U) **Relationships among leadership roles, attitude toward physical activity, and physical activity skill success.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6432.

10936. Ormerod, M. B. (Brunel U, Uxbridge, England) **Subject preference and choice in co-educational and single-sex secondary schools.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 257-267.—Investigated the subject preferences and subject choices of a total of 1,204 pupils in 19 single-sex and co-educational secondary schools in England and Wales. Sex-linked polarization of subject preferences were more marked in co-educational than in single-sex schools. An investigation of the effect of attitudes towards teachers showed a relationship between liking for teacher and subject preference, but not subject choice. Results are discussed in relation to the current reorganization of secondary schools along co-educational, as well as comprehensive, lines. (34 ref)—*Journal abstract*.

tion Abstracts International, 1974(Apr), Vol 34(10-A), 6458-6459.

10938. Popov, Dan. (U Colorado) **The emotional adjustment of the college student to the university community as seen by the two major counseling centers of the University of Colorado.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6222.

10939. Popp, Manfred. [Educational and general attitudes of education students in self evaluations.] (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(5), 281-285.—52 male and 52 female education students rated their own general attitudes and teaching attitudes with respect to 9 characteristics found to be significant in 2 previous factor analyses: Friendly, Balanced, Polite, Modern, Quiet, Persistent, Enthusiastic, Tolerant, and Understanding. There were no significant differences in means between sexes. Correlations were computed for each sex separately. 13 of 18 correlations were very significant, 3 significant. Only Understanding had low r 's: .21 for males, .25 for females. The means of the correlations between educational and general attitudes were .44 for males, .48 for females. (English summary)—W. O. Horn.

10940. Pusey, Paul F. (Oklahoma State U) **The effects of punitive threat and levels of anxiety on hostility among Indian high school students.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6459.

10943. Rupkey, John T. (Northern Illinois U) **The effects of teacher-directed group counseling on self-esteem, congruence of student and teacher perception of group climate, and achievement of teacher's goals for group climate.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4889.

10944. Salwaechter, Bill L. (Oklahoma State U) **The relationship between the pupil control ideology of teachers and the productive work of students.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6462-6463.

10945. Schmidt, W. Ernie & Tyler, Vernon O. **The pinpointing effect vs the diffusion effect of peer influence.** *Psychology in the Schools*, 1975(Oct), Vol 12(4), 484-494.—12 6-8th graders were selected from 6 classes. Each entire class was rewarded for increased ignoring of the target behavior (whispering): in the 3 P (pinpointed) classes, for ignoring the whispering of Designated (target) Ss; in the 3 D (diffusion) classes, for ignoring whispering by all class members. Results indicate that a peer group can decrease reinforcement of a disruptive behavior and thereby decelerate it in a singled-out child (pinpointing effect) with equal effectiveness. However, data suggest that peers ignored P Ss most, D Ss next most, and P-designated Ss the least and

that this pattern of ignoring was mirrored in the pattern of deceleration of the target behaviors in the 3 groups. These patterns suggest that the pinpointing effect may be stronger than the diffusion effect. (19 ref)—*Journal abstract*.

10946. Shigley, Ralph H. (U Georgia) **A comparison of group administered punishment and individually administered punishment to suppress inappropriate classroom behavior.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4028.

10947. Silvino, Philip J. (State University Coll New York, Cortland) **A study of the values of elementary school children.** *Education*, 1975(Win), Vol 96(2), 170-176.—Used the Social Values Inventory to examine the values of 555 4th-, 5th-, and 6th-graders from public and parochial schools. From the results of statistical findings using chi-square it is concluded that there were significant differences in the measured values in relationship to each of the variables of sex, grade, parochial school and public school students, and socioeconomic level. The value categories that seemed to be producing the differences are identified. The public-parochial school variable had the most number of value differences that were significant. (25 ref)—*Journal abstract*.

10948. Slavin, Robert E. **Classroom reward structure: An analytical and practical review.** *Center for Social Organization of Schools Report, Johns Hopkins U*, 1975(Dec), No 207, 25 p.—Presents a review of the literature on cooperative, competitive, and independent reward structures and performance. Conclusions are drawn which reformulate current beliefs about the interaction between reward structure and task structure. A brief theory of reward structure and performance is included, and conditions under which cooperative structures may be more effective than competitive ones are outlined. A review of the literature on reward structure and social connectedness strongly suggests that cooperative reward structures may have considerable utility in increasing attractions and reducing hostility between students. A technique which has had positive effects on both academic performance and social connectedness, Teams-Games-Tournament, is described, and suggestions are made for further research. (5 p ref)—*Journal abstract*.

10949. Stiltner, Barbara L. (U Colorado) **The effects of interaction activities on group development in junior high school classes.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6393.

10950. Tamir, P. (Hebrew U, Jerusalem, Israel) **The relationship among cognitive preference, school environment, teachers' curricular bias, curriculum, and subject matter.** *American Educational Research Journal*, 1975(Sum), Vol 12(3), 235-264. Reviews research findings on cognitive preference style (CPS) of students studying "new" and traditional curricula, and presents results based on a biological cognitive preference test (BCPT). CPSs were found to depend partly on subject matter; they are related to student characteristics (i.e., sex and aptitude), the school environment, the curriculum studied, and the curricular bias of the teachers. Students studying a BSCS type curriculum for several years under teachers favorable to the BSCS approach display a CPS significantly more inquiry-oriented than

the style of controls. Several interaction effects are also reported. Cognitive preference testing is recommended for curriculum evaluation because of its discipline and subject-matter dependence. (17 ref)—*Journal abstract.*

10951. Theisen, David L.; Magnuson, Jack; Uhlig, George E. & Vazquez, Alma G. (American Independent School, Lima, Peru) **Later school effects of early kindergarten entrance.** *Journal of Instructional Psychology*, 1975(Fal), Vol 2(4), 28-35.—Investigated the differential effects of within-group age differences of kindergartners as they manifest themselves in later grades. 161 4th and 197 8th graders were administered the Stanford Achievement Test, and scores were correlated with Ss' results on the Gates-MacGinitie Reading Tests and with age of Ss' entrance into kindergarten. Findings suggest that many of the dysfunctional problems of the early and middle elementary grades (e.g., reading problems, speech difficulties, and emotional maladjustment) can be explained in terms of chronological immaturity during kindergarten and 1st grade.—*Journal abstract.*

10952. Thompson, Barbara L. **Secondary school pupils' attitudes to school and teachers.** *Educational Research*, 1975(Nov), Vol 18(1), 62-66.—Asked teachers of approximately 2,400 1st- and 4th-yr secondary school pupils to identify those among them whom they thought to be particularly well- or ill-adjusted. The attitudes of these contrasted groups towards various aspects of school and home life were then assessed by the use of the "semantic differential" technique. It was found that, overall, teachers were seen as positively as other adults, but also as being somewhat lacking in such qualities as warmth, kindness, and happiness. The "ill-adjusted" pupils had less favorable opinions of school and teachers. It is acknowledged that the manner in which the contrasting groups were identified severely limits the significance that can be attached to the findings.—*Journal abstract.*

(Las Cruces Public Schools, New Mexico) **Supervision and site of instruction as factors in tutorial programs.** *Exceptional Children*, 1975(Nov), Vol 42(3), 151-154.—Results of experiments examining the effects of tutoring location and teacher supervision on the efficacy of cross-age tutoring for learning disabled 3rd graders suggest that the site of tutoring is less important than is the extent of supervision provided by the teacher.
10983. McConkey, R. & Jeffree, Dorothy M. (U Manchester, Hester Adrian Research Ctr, England) **Preschool mentally handicapped children.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 307-311. —Examined the characteristics of the preschool mentally handicapped child. Information was collected on 150 mentally handicapped children who were under 5. Many of the children had additional handicaps and all showed marked retardation in their physical, social, play, and language development. The majority of parents expressed a willingness to take part in a parental involvement project. Their main concerns were with the child's speech and language development and in coping with management problems. The implications of these findings for services provided for these parents and children are discussed.—*Journal abstract*.
10984. McMakin, Ansel B. (George Peabody Coll for Teachers) **Differential effect of two training programs on directional orientation and social development of educable mentally retarded children.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6431-6432.
10985. Minskoff, Esther H. **Research on psycholinguistic training: Critique and guidelines.** *Exceptional Children*, 1975(Nov), Vol 42(3), 136-144. —Presents a critique of D. D. Hammill and S. C. Larsen's (see PA, Vol 53:6153) review approach, and discusses those variables which must be described and

controlled in all efficacy studies. The author contends that such studies differ with respect to the nature of the Ss, the treatment, and the experimental design. A contrasting view is presented (i.e., psycholinguistic disabilities can be trained), and a major criterion for creating or evaluating psycholinguistic training is considered in its relationship to various academic and social demands made upon a child at a particular age.—*Journal summary*.

10986. Moog, Jean S. (Central Inst for the Deaf, St Louis, MO) **Language instruction determined by diagnostic observation.** *Volta Review*, 1975(Dec), Vol 77(9), 561-570.—Presents case studies describing language instruction objectives and procedures for 2 hearing-impaired children who exhibited very different language abilities. Included are the instructor's observations that suggested the specific instructional procedures and the results of their application.

10987. Newcomer, Phyllis; Larsen, Stephen & Hammill, Donald. **Research on psycholinguistic training: Critique and guidelines. A response.** *Exceptional Children*, 1975(Nov), Vol 42(3), 144-148.—The authors reassert their arguments and comments on the effectiveness of psycholinguistic training (see PA, Vol 53:6153) which were criticized by E. H. Minskoff (see PA, Vol 55:Issue 5). They conclude that psycholinguistic training based on the Kirk-Osgood model is unsuccessful because it does not help children improve their ability to speak or understand language nor aid them in specific academic skills.

10988. Pearson, Dorothy M. (U Wisconsin) **Social class and mental retardation: Educational, vocational, and social differences of young adult mentally retarded males.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6488.

10991. Prillaman, Douglas. (Coll of William & Mary) **An analysis of placement factors in classes for the educable mentally retarded.** *Exceptional Children*, 1975(Oct), Vol 42(2), 107-108.—Examined the policies and practices of the placement of children in classes for the educable mentally retarded (EMR) and attempted to determine the extent to which children are misplaced in these classes. Data were collected on 7,427 children in primary and intermediate EMR classes in Virginia public schools. It was found that (a) on a statewide basis, there were more Blacks than Whites enrolled in EMR classes, even though Whites constituted a decided majority of the total population in the state; (b) there was a high percentage of males enrolled in EMR classes; (c) a majority of children came from low socioeconomic environments; and (d) some special classes for the EMR had become places for assignment of children with a

variety of handicapping and nonhandicapping conditions. Recommendations for the placement of EMR children are presented.—*M. E. Pounsel*.

10992. Stadstad, Curtis A. (United States International U) **Humanistic education for the gifted.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6467-6468.

10993. Starkey, Charles T. (U Wisconsin) **An analysis of the components of a group contingency to control disruptive classroom behavior.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6489.

10994. Stephens, Wyatt E. & Ludy, Isa E. (Southern Illinois U, Carbondale) **Action-concept learning in retarded children using photographic slides, motion picture sequences, and live demonstrations.** *American Journal of Mental Deficiency*, 1975(Nov), Vol 80(3), 277-280.—Investigated the relative effectiveness of 3 action-concept instructional techniques with 30 retarded 12-yr-old children. Ss viewed slides, movies, or live demonstrations of 20 actions. The 3 different instructional approaches yielded higher adjusted posttest than pretest recognition scores. The highest posttest score was yielded by the motion picture sequence technique.—*Journal abstract*.

10995. Sulek, Milan. **[Remedial educational care of children with disturbed emotional development.]** (Slovak) *Psychológia a Patopsychológia Dieťaťa*, 1975, Vol 10(2), 165-172.—Reports experiences in a remedial educational institute in Czechoslovakia, stressing the value of team work and the importance of influencing the home environment.—*Journal summary*.

Counseling & Measurement

10996. ———. **[Committee of experts on the place and role of counseling and guidance in life-long integrated education.]** (Czech) *Psychologica: Zborník Filozofickej Fakulty, U Komenského*, 1975, Vol 23(13-A), 9-241.—Considered several national approaches to guidance and stresses its indispensability in developing nations. Guidance is seen in the context of contemporary social evolution, and the training of educational and vocational specialists is discussed. 11 recommendations are made. (Russian summary)

10997. Addy, Mapule F. (U Massachusetts) **Changes in self-regard and regard for others as a function of interaction group experiences.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6376.

10998. Anderson, Elizabeth K. (U Michigan) **A comparison of two models for placement recommendations for educable mentally handicapped children.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4918-4919.

10999. Atkeson, Paula & Guttentag, Merna. (D.C. Inst of Mental Hygiene, Washington) **A parent discussion group in a nursery school.** *Social Casework*, 1975(Nov), Vol 56(9), 515-520.—Points out the value of group developmental counseling in a nursery school or day-care center. Because parents are inexperienced when they first have children they are then more receptive. Talking with other parents as well as teachers allows feelings to be expressed that would not emerge in conferences with teachers and school staff only. Groups encourage a parent to seek further help, if needed. This

inexpensive, uncomplicated service can educate the parent in child development and provide guidelines for recognizing what behavior is normal, and what is cause for concern. (29 ref)—*M. W. Linn.*

11000. Beery, Richard G. (U California, Berkeley) **Fear of failure in the student experience.** *Personnel & Guidance Journal*, 1975(Dec), Vol 54(4), 191-203.—An understanding of the failure experience is felt to be vital to students and to professionals who work with them. Fear of failure lies behind widely diverse problem reactions to school, and is found in undergraduate and graduate students of all levels of ability. Aspiration-level experiments illustrate how failure avoidance operates by making use of a variety of strategies, as explained by attribution theory. Several case studies are examined to illustrate the use of such strategies. It is felt that for counselors the goal should be the client's sense of well-being and self-esteem rather than the external appearance of academic adjustment or high performance.—*G. S. Speer.*

11001. Bergland, Bruce W. & Lundquist, Gerald W. (U Colorado, School of Education, Denver) **The vocational exploration group and minority youth: An experimental outcome study.** *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 289-296.—Investigated the effectiveness of the vocational exploration group (VEG) in assisting students to become more aware of the world of work and its relevance for them. 60 male Mexican-American 9th graders were randomly assigned to 1 of 3 groups: (a) VEG, (b) VEG without interaction, or (c) control. Upon completion of treatments Ss were posttested with the Career Exploration Questionnaire, an instrument designed to assess knowledge of factors such as differing functions of jobs, interests and skills needed in different jobs, and satisfactions available from work. Analyses revealed no statistically significant differences among groups.—*Journal abstract.*

11011. Fingerhut, W. & Langfeldt, H. P. (U Marburg, Inst of Psychology, W Germany) [Experiences with the achievement test for Grade 4 (AST4).] (Germ) *Psychologie in Erziehung und Unterricht*, 1973, Vol 20(4), 249-257.—1,855 4th graders in largely rural areas were administered the AST4, and achievement test developed by F. Fippinger (1967). While Fippinger found it advisable to have separate norms for schools with less and with more than 8 classes, the research pointed to no significant differences between both groups (vocabulary excepted). Scores on geographical knowledge and map reading correlated .60 with the total and only .45 with the specific subtest. In math and German, the specific subtests correlated only insignificantly better than the total. Females did not perform as well as males in math and geography (map reading). Children of university graduates were about 1 standard deviation higher in achievement than those of unskilled laborers. (English abstract)—*W. O. Horn.*

11022. Khan, S. B. & Roberts, Dennis M. (Ontario Inst for Studies in Education, Canada) Structure of academic attitudes and study habits. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 835-842.—Administered the Survey of Study Habits and Attitudes to 243 senior high school and 603 freshman university students. Their responses were analyzed to test the a priori classification of items into Delay Avoidance (DA), Work Methods (WM), Teacher Approval (TA), and Education Acceptance (EA) scales and to test the hierarchical structure of the scales. Transformations of the initial factor matrix to varimax and congruence to a hypothesized structure supported the classification of items into DA, WM, and TA scales but not the EA scale. The higher-order factoring of the initial factor-inter-correlations revealed a 2-stage hierarchical structure. Implications for student counseling are discussed. *Journal abstract.*

11044. Rost, Derlef H.; Theunissen, R. & Andert, J. **[Performance under perceived short-time limits.]**

(Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(5), 293-302.—Administered to 100 boys and 100 girls (5th grade) from 4 elementary schools in Hamburg standard tests in reasoning, number, and perceptual speed under normal conditions and under conditions of strict timing, with the use of a stop watch and frequent announcement of the remaining time. Questionnaires measured neuroticism, introversion, anxiety, and dislike for school. Analysis controlled for test sequence, sex, school, and tester. Speed of calculating increased significantly under pressure without an increase in errors. Ss with high test anxiety achieved less, even when not under pressure. Those with low grades in math performed less well under pressure while performance was higher in general. Poor achievers tended to show more test anxiety. Correlations between personality and achievement variables were very low. (English summary) (36 ref)—*W. O. Horn.*

11046. Schoenfeldt, Lyle F. & Brush, Donald H. (U Georgia) **Patterns of college grades across curricular areas: Some implications for GPA as a criterion.** *American Educational Research Journal*, 1975(Sum), Vol 12(3), 313-321.—Transcript records of over 1,900 college students were transformed into a profile of grades across 12 curricular areas. The record for each S also included high school grade point average (GPA) and Scholastic Aptitude Test scores. Intercorrelations among the 12 college GPA variables were comparable to findings in previous research which analyzed GPA over successive semesters. Factor analysis resulted in 2 GPA factors, General Academic Achievement and Grades Independent of Achievement/Aptitude, indicating that GPA is not unitary, but is also not a multifaceted composite. It is concluded that the system of grades can be considered singular for most predictive purposes.—*Journal abstract*

11047. Schudson, Karen R. (Greendale Intermediate School, WI) **The simple camera in school counseling.** *Personnel & Guidance Journal*, 1975(Dec), Vol 54(4), 225-226. Presents photography as an effective tool in promoting personal development and growth. Some variations in its use are briefly described.—*G. S. Speer.*

11048. Shea, Gerald F. (Fordham U) **The effects of reality therapy oriented group counseling with delinquent, behavior-disordered students.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-A, Pt 1), 4889-4889.

11050. Sussman, Gilbert & Justman, Joseph. (Occomside Public Schools, NY) **Characteristics of preadolescent boys judged creative by their teachers.** *Gifted Child Quarterly*, 1975(Fal), Vol 19(3), 210-216. 39 adjectives descriptive of adult creativity (Domino, 1970) were used to rate preadolescent boys judged on creativity by their teachers. Teachers indicated whether or not the adjectives

tives applied to each student in the previous year's class. At a later date, the teachers rated the Ss on a 1-5 scale of creativity. 34 of the 59 adjectives were found to be descriptive of creative Ss and all had positive connotations. The 4 items descriptive of noncreative Ss had negative connotations. It is concluded that characteristics associated with preadolescent creativity appear to be more idealized and less ambivalent than those associated with adult creativity.—J. C. Gowan.

11051. Thomas, David B. (U Iowa) **Sequential testing for instructional classification.** *Journal of Computer-Based Instruction*, 1975(May), Vol 1(4), 92-99.—Proposes a model which employs discriminant functions to classify examinees into groups which could correspond to instructional treatments. A termination rule based on the computed posterior probability of group membership is suggested. Two studies were conducted with a total of 773 8th, 10th, 11th and 12th graders in which the model was employed in simulations using the School and College Ability Test and the Iowa Test of Basic Abilities Vocabulary scale. Examinees were classified into 4 groups. It was found that classification accuracy was highest in the 2 groups representing the extremes of the score distribution. Classification errors were high in the middle groups. Analysis of the errors indicated that those Ss were generally in a group within 3 score points of their "true" group. Major errors occurred for 5% of the Ss. Analysis of item economy indicated that $\frac{1}{2}$ - $\frac{1}{3}$ of the total items were needed for the classifications.—*Journal abstract*.

11065. Hartley, L. R. & Shirley, E. (U Otago, Dunedin, New Zealand) **Color-name interference at different times of day.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 119-122.—Conducted 2 experiments on the effect of different work shifts on efficiency by testing an aspect of the performance of nonshift workers at several different times of day. A pencil-and-paper, choice-reaction time modification of the Stroop Color-Word Test was used to measure performance. In Exp I, 14 16-50 yr old housewives and workers were tested at 8 AM and 16 Ss were tested at 6 PM. In Exp II, a single group of 12 college students was tested, within a period of 24 hrs, at 8 AM, noon, 8 PM, and midnight. In both experiments, color interference was greater in the early evening than in the morning. Results are attributed to covariation of color interference with diurnal variation in arousal and have implications for the choice of

work shift and distribution of work during the shift period.—*Journal abstract.*

11067. Lieblich, Israel; Ben Shakhar, Gershon & Kugelmass, Sol. (Hebrew U, Jerusalem, Israel) **Validity of the guilty knowledge technique in a prisoner's sample.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 89-93.—Evaluated the guilty knowledge technique as a detector of knowledge held by 30 prisoners in a maximum security prison in Israel. In an initial interview, Ss responded to 20 questions designed to elicit personal responses or items. During a later interrogation, Ss were presented verbally with (a) the same 20 questions and (b) 5 alternative responses including their own personal response and 4 neutral control responses. During the interrogation, Ss listened quietly while their GSRs were monitored. On the basis of the GSR data, a significant proportion ($p < .01$) of the Ss were correctly matched with their personal questionnaire responses. Although better overall matching had occurred with college students in a previous study by G. Ben Shakhar et al (1970), no differences between the samples appeared on items involving strongly personal information.—*Journal abstract.*

11068. Nevin, John R. & Ford, Neil M. (U Wisconsin, Graduate School of Business, Madison) **Effects of a deadline and a veiled threat on mail survey responses.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 116-118.—Examined the effects of including various deadline dates in a cover letter and including a veiled threat in a follow-up letter on response rates, response patterns, and quality of response. Data from a systematic sample of 1,040 undergraduates show that (a) deadline dates did not stimulate a heavier, more immediate response but did seem to decrease the rate of returns following the deadline date; and (b) sending a veiled threat follow-up letter greatly increased the response rate over the more casual follow-up letter. *Journal abstract.*

11069. Salipante, Paul & Goodman, Paul. (Case Western Reserve U, School of Management) **Training, counseling, and retention of the hard-core unemployed.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 1-11.—Examined the effect of training and counseling on the retention of the hard-core unemployed (HCU), using both cross-sectional and longitudinal data from 130 programs in 114 firms involved in hiring the HCU. Results indicate that the content of training, rather than whether training is offered, was the critical variable. Job-skills training was positively related to retention; attitudinal training measured by the use of role playing was negatively related to retention. Personal counseling activities that encouraged the trainee to attend were also related to retention. Also, an interaction effect on retention between counseling and the length of training was identified. A theoretical framework for explaining the relationship between program characteristics and retention is discussed. (24 ref)—*Journal abstract.*

Occupational Attitudes & Interests & Guidance

11070. Chu, Ping-Hsing. (Changhua Provincial Coll of Education, Taiwan) **Cross-cultural study of vocational**

interests measured by the Strong-Campbell Interest Inventory. *Acta Psychologica Taiwanica*, 1975, Vol 17, 69-84.—Administered the Strong-Campbell Interest Inventory (SCII) to 2,178 American college students and to 1,360 Chinese college students to collect data on the standardization of the measure on Chinese Ss. Results show the following: (a) among female Ss, there were 108 items out of 325 which differentiated between the "Likes" of Americans and Chinese by 15% or more, and among the 2 male groups, 84 items carried 15% or more response differences; (b) the responses of American females to the SCII were statistically different from those of the Chinese female group on 255 items and between the 2 male groups, differences with statistical significance were found on 262 items; (c) the response differences between American and Chinese Ss indicate that a cultural factor plays an important role in influencing vocational interests.—*Journal abstract.*

11071. Dawis, René V. & Lofquist, Lloyd H. (U Minnesota) **Toward a psychological taxonomy of work.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 165-171.—Presents a new approach to the construction of a psychological taxonomy of work. Based on the theory of work adjustment (R. V. Dawis et al, 1968), occupational aptitude patterns and occupational reinforcement-pattern clusters are cross-classified to develop psychologically homogeneous groups of occupations (taxons). Information from other different and independently developed classification systems is imbedded in the taxon matrix. The validity of the approach is supported by the consistency and complementarity of the descriptive information in a given taxon derived from these different sources. (19 ref)—*Journal abstract.*

11072. Gottlieb, David. (U Houston, Coll of Social Sciences) **College youth and the meaning of work.** *Vocational Guidance Quarterly*, 1975(Dec), Vol 24(2), 116-124. Studied 1,800 Pennsylvania college seniors, representing a wide variety of collegiate and demographic backgrounds, at graduation and 1 yr later, to determine American youths' perceptions of work, and the relationship between their career expectations and actual career experiences. Major findings include the following: (a) socioeconomic background, race, and sex were powerful predictors of postgraduation career status; (b) Regardless of sex, race, or background, seniors' career choices were often made haphazardly, and adequate career information was rarely accessible; (c) Before entry into employment seniors tended to hold idealistic attitudes toward work and careers, but follow-up revealed considerable disenchantment; (d) Ss considered good family relationships the most important aspect of their lives both before and after graduation. The implications for program and policy changes are discussed, and recommendations are made for career preparation that better enables seniors to fit their optimistic outlooks into the realities of the work world. (4 Haikinen)

11073. Hall, Julia G. (U Pennsylvania) **An examination of some social psychological determinants of the occupation decision making of high school seniors.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(B, A, Pt 2), 5331-5332.

11074. Heshusius-Gilsdorf, Lous T. & Gilsdorf, Dale L. (Indiana U, Ctr for Innovation in Teaching the Handicapped, Bloomington) **Girls are females, boys are males: A content analysis of career materials.** *Personnel & Guidance Journal*, 1975(Dec), Vol 54(4), 207-211.—To determine the expression of the double standard of mental health in career orientation textbooks, a content analysis was made of 2 such series, published in 1971 and 1973. The 1971 series contained no statements expressing the double standard, but the 1973 series was found to present males and females in traditional occupational sex roles. Suggestions are offered to counselors and educators to help them avoid textbooks expressing these stereotypes. (29 ref)—*G. S. Speer.*

11075. Holland, John L.; Gottfredson, Gary D. & Gottfredson, Linda S. (Johns Hopkins U, Educational Research Ctr) **Read our reports and examine the data: A response to Prediger and Cole.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 253-259.—Argues that the report by D. J. Prediger and N. S. Cole (see PA, Vol 55:Issue 5) on the present authors' study of sex-role stereotypes and vocational interests is neither an accurate account of the present authors' data nor of their interpretations of the data. The present authors charge, in addition, that Prediger and Cole's report provides an incomplete, inaccurate, and simplified view of interest inventory construction, use, and associated problems: the lack of a consensual definition of sex-bias, the role of vocational theory and personal development, the practical problems in test construction and use, the evidence about inventory effects on users, the distinction between scientific assessment and social action, the criteria for ideal inventories, distinctions between sex differences and sex stereotypes or bias, the ethical issues involved in lowering the validity of an inventory in the service of social action without informing the users, the importance of a person's own aspirations and self-concept, and related matters. The present authors provide a list of reports on the subject and suggest that interested readers come to their own conclusions.—*Journal abstract.*

11076. Jepson, David A. (U Iowa, Coll of Education) **Occupational decision development over the high school years.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 225-237.—Describes the development of occupational decision processes over the high school years. 5 developmental trends derived from theory were examined separately for males and females in 3 rural schools. Ss were 207 students who had made regular progress through school. Growth was defined as increased frequency in classes of behavior from early 9th to late 12th grade. The key processes in occupational decision development for both sexes appeared to be an information search strategy and an elaborate rationale. Both processes increased in complexity and contributed to confident feelings about occupational choices in 12th grade. Implications for measurement of occupational decision processes and for developmental research are discussed. (18 ref)—*Journal abstract.*

11077. Lederle-Schenk, Uta. [Constancy of interests during vocational training.] (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(5), 270-280. Developed a 345-item vocational interest test. Factor analysis led to 11 major areas of interest. 305 manual

workers and 70 clerical apprentices answered the test at the beginning of their training and yearly for the next 3-4 yrs, depending on the length of their training. The manual workers were subdivided into 3 groups according to the physical stress of their work. 88 students in a selective high school served as controls. Significant differences in the profiles of these groups persisted from the beginning to the end of their training. A loss of enthusiasm was also observed. Distinctive differences in interests seem to develop before vocational training begins and are hardly influenced by the training itself. (English summary)—*W. O. Horn.*

11079. Omvig, Clayton P.; Tulloch, Rodney W. & Thomas, Edward G. (U Kentucky) **The effect of career education on career maturity.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 265-273.—Notes that career education efforts are under way in almost 1/2 of all school districts in the US. Indications are that this trend will continue. However, the question of the effects of career education programs remains essentially unanswered. The present study was designed to assess the effects of a career education program on students' career maturity as measured by the Career Maturity Inventory (CMI). A pretest-posttest design was used. Ss were 480 6th and 8th graders, half of whom participated in a career education program (experimental) and half in a regular school program (control). Experimental Ss consistently displayed higher posttest career maturity levels, 4 scores being significantly higher. Significant differences were found in occupational knowledge of 6th graders, occupational planning for both 6th and 8th graders, and in the attitude scale score for the 8th graders. It is concluded that the career education program had a positive effect in increasing students' levels of career maturity.—*Journal abstract.*

11080. Peterson, Candida & Peterson, James. (Northern Illinois U) **Issues concerning collaborating careers.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 173-180.—140 male and 140 female college students responded to stories about married physicians whose total income was greatest, respectively, when (a) the husband cared for the children, (b) the wife cared for children, (c) either spouse cared for them, (d) the wife earned more than the husband, or (e) the husband earned more than the wife. A strong bias in favor of maternal child care was found in situations (b) and (c), while in situation (a) a majority of females favored paternal child care, and males chose father and mother about equally. No aversion to the wife's earning more than the husband was found. Results are discussed in terms of their relevance to collaborating careers.—*Journal abstract.*

11081. Prediger, Dale J. & Cole, Nancy S. (American Coll Testing Program, Research & Development Div. Iowa City, IA) **Sex-role socialization and employment realities: Implications for vocational interest measures.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 239-251.—Examines methods for reporting vocational interests which do and do not reflect sex-role stereotypes.

Interest inventory validation procedures based on the prediction of occupational preference and group membership are shown to favor inventories providing scores that reflect past sex-role stereotypes and current employment inequities. Attention is called to a recent study by G. D. Gottfredson et al (1974) demonstrating the extent to which sex-role stereotypes are reflected in employment patterns. Reporting and validation procedures minimizing these shortcomings are suggested. These procedures, supported by past practice and recent research, result in similar interest score distributions for men and women. Finally, career counseling problems arising from the confounding of reports of human interests with current employment realities are discussed. (20 ref)—*Journal abstract*.

11082. Prediger, Dale J. & Cole, Nancy S. (American Coll Testing Program, Research & Development Div, Iowa City, IA) **It is time to face some issues: A response to Holland, Gottfredson, and Gottfredson.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 261-263.—Suggests that J. L. Holland et al—who criticized a study by the present authors on sex-role stereotypes and vocational interests (see PA, Vol 55:Issue 5)—are not facing the specific issues addressed but are rather only providing illustrations of practices in interest measurement. The present authors give several examples of questions suggestive of the issues they addressed (e.g., When terms such as "less valid" or "lowered validity" are used, what validity criteria are involved? What does it mean to represent both sexes "as equally as possible" in a raw score profile for an occupation if there are substantial, systematic, and stereotypic differences in the raw scores of men and women in the same occupations?) The present authors contend that in their paper they attempted to identify, examine, and take a position on some basic issues and that the reply, contrary to their hopes, failed to directly address these issues, delaying their resolution.—P. O'Brien.

(Occupational & Manpower Research Div, Lackland Air Force Base, TX) **Dimensions of job satisfaction: Initial development of the Air Force Occupational Attitude Inventory.** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 1-2.

11085. Walsh, William M. (Northeastern Illinois U, Coll of Education, Chicago) **Classics in guidance and counseling.** *Personnel & Guidance Journal*, 1975(Dec), Vol 54(4), 219-220. Prepared a list of 16 books and articles cited in at least 4 texts and published before 1958. Ten guidance textbooks were surveyed. The articles and books are presented as classics in guidance and counseling.—G. S. Speer.

Personnel Selection & Training

11086. Arvey, Richard D.; Gordon, Michael E.; Massengill, Douglas P. & Mussio, Stephen J. (U Tennessee, Coll of Business Administration, Knoxville)

Differential dropout rates of minority and majority job candidates due to "time lags" between selection procedures. *Personnel Psychology*, 1975(Sum), Vol 28(2), 175-180.—Studied the effects of (a) delay between initial application and the 1st selection procedure, (b) job classification grade, and (c) race of applicant on the percentage of applicants who did not appear for the 1st selection procedure. Analyses were made of 2,205 White and 252 Black and Indian applicants for 70 entry-level civil service jobs in a large city. When the delay was greater than 4 wks, a significantly greater percentage of minority than majority applicants failed to appear for the 1st selection procedure. No differences were found when delay was less than 4 wks. The implications of these findings for affirmative action programs are discussed.—J. McKillip.

11087. Brown, James E.; Waag, Wayne L. & Eddowes, Edward E. **USAF evaluation of an automated adaptive flight training system.** *US AFHRL Technical Report*, 1975(Oct), No 75-55, 60 p. Evaluated the training effectiveness of the Automated Flight Training System (AFTS) in the F-4 training program; identified desired hard- and software modifications for operational AFTS devices; and identified effective methods of operational training use. Performance, questionnaire, and maintenance data collected from 24 F-4 combat trainees are presented.

11088. Farley, John A. & Mayfield, Eugene C. (Prudential Insurance Co of America, Newark, NJ) **Peer nominations without peers?** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 109-111.—A self-peer method of obtaining ratings of the need to achieve developed by D. S. Holmes and J. D. Tyler (see PA, Vol 43:4029) has been shown to be predictive of college students' academic grades. The present study was undertaken to see whether the method would extend to an employment situation and be predictive of on-the-job performance of life insurance sales applicants. The relation between self-peer ratings, made by 1,119 agents at the time they applied for the job, and survival and productivity 1 yr later was investigated. Results show no validity for the self-peer ratings.—*Journal abstract*.

11089. Farr, James L. & York, C. Michael. (Pennsylvania State U) **Amount of information and primacy-recency effects in recruitment decisions.** *Personnel Psychology*, 1975(Sum), Vol 28(2), 233-238. Studied how the amount of information, the order of presentation of favorable and unfavorable information, and the number of judgments affect recommendations for a plane trip for hypothetical job applicants. 84 corporate recruiters who had applied for an academic engineering position were randomly assigned to experimental conditions. Recency effects were found when repeated judgments rather than single judgments were made. Primacy was observed in this latter condition. No effect was found for amount of information. Differences between these results and those of previous studies are discussed.—J. McKillip.

11090. Hakel, Milton D.; Klimoski, Richard J. & Wood, Michael E. (Ohio State U, Research Foundation) **Management of social incentives in Air Force technical training: A field experiment.** *Catalog of Selected Documents in Psychology*, 1976(Feb), Vol 6, 24-25.

11092. Hillery, Joseph M. & Fugita, Stephen S. (U Akron) **Group size effects in employment testing.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 745-750.—Examined the effects of the number of individuals (1-10) coacting while taking 2 standardized motor performance tests. Scores on the manual and finger dexterity sections of the General Aptitude Test Battery were collected from 2 state employment agencies for 2,261 actual applicants. Increases in aptitude scores corresponding to increases in group size were predicted based upon the summation hypothesis of social facilitation theory. Results indicate a group size effect with performance appearing to increase somewhat linearly with increases in number of coactors. Implications for social facilitation theory and the interpretation of tests administered in a group setting are discussed.—*Journal abstract.*
11093. Kopelman, M. D. (Middlesex Hosp Medical School, London, England) **The contrast effect in the selection interview.** *British Journal of Educational Psychology*, 1975(Nov), Vol 45(3), 333-336.—Investigated the influence of preceding interviewees' performance on the assessment of a 3rd candidate's interview. Mock interviews of candidates applying for medical school were recorded on videotape, and were rated by 60 Ss. A highly significant contrast effect was obtained, but it accounted for only 11% of total decision variance. A candidate's own standard of performance was by far the most important factor determining his rating. The contrast effect was most influential in the assessment of candidates of intermediate performance, but it is suggested that one group of researchers may have overestimated its importance. (16 ref)—*Journal abstract.*
11094. Le Master, W. Dean & Gray, Thomas H. (Flying Training Div, Williams Air Force Base, AZ) **Ground training devices in job sample approach to undergraduate pilot training (UPT) selection and screening.** *Catalog of Selected Documents in Psychology*, 1975(Jan), Vol 5, 295.
11095. Mayer, Steven E. & Bell, Anita I. (Rainbow Research, Minneapolis, MN) **Sexism in ratings of personality traits.** *Personnel Psychology*, 1975(Sum), Vol 28(2), 239-249.—Compared the factor structure of personality trait ratings of hypothetical male and female job applicants made by 75 male and 75 female college undergraduates. Ss rated 3 male and 3 female stimulus persons described in high, medium, and low favorable terms, on 26 bipolar scales: (a) 20 taken from W. T. Norman (1963), (b) 4 relating to competency, and (c) 2 relating to masculinity and femininity. Comparisons were made of loadings of scales on varimax rotated factors from 4 analyses, females rating females, females rating males, males rating females, and males rating males. It is concluded that (a) raters of different sex and stimulus persons of different sex produce different factor structures; (b) females see males and females as more similar than males do, while males have more complex stereotypes of males and of females than females do; and (c) the notion of competence, although somewhat different for male and female raters, is a major organizing theme.—*J. McKillip.*

11100. Pritchard, Robert D.; Hollenback, John H. & DeLeo, Philip J. (Inst for Organizational Behavior Research, Lafayette, IN) **Development and evaluation of an objective technique to assess effort in training.** *US AFHRL Technical Report*, 1975(Oct), No 75-39, 47 p.—Explored the validation of a quantifiable, objective, and reliable method of measuring the amount of effort to be directly rewarded in incentive systems. A battery of relevant ability tests (e.g., the Otis-Lennon Mental Ability Test and the Study Skills of the Stanford Achievement Test) was given to 32 of Air Force trainees and to 20 civilians using a simulation of the course taught the Air Force trainees. Results show that the simulation Ss were comparable to the Air Force Ss and that the ability test battery predicted performance equally well for both samples. The hard criterion of effort displayed wide variability, excellent reliability, and good construct validity. (39 ref)—*Journal abstract.*
11101. Rosenbaum, Richard W. **Predictability of employee theft using weighted application blanks.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 94-98.—Constructed weighted application blanks to predict employee theft from a mass merchandiser and a supermarket chain. The weighting samples in each study included 50 applications of former employees "caught stealing" and 50 applications of former employees "not caught stealing" who were recommended for rehire. Each instrument was cross-validated on separate holdout groups of 50 and 100; obtained point-biserial correlations ranged from .25 to .54. Company personnel later independently validated the separate scoring keys twice, each time using fresh samples of 20 cases; correlations obtained ranged from .17 to .63. Results suggest that some organizations might use weighted application blank scores to reduce internal theft by scheduling differential surveillance for potentially high-risk employees. 11111. Wood, Michael T.; Hakel, Milton D.; DelGaizo, Edward R. & Klimoski, Richard J. (Ohio State U) **Identification and analysis of social incentives in Air Force technical training.** *US AFHRL Technical Report*, 1975(Oct), No 75-10, 139 p. Administered questionnaires to 463 Air Force technical trainees and 102

instructors to investigate potential incentives for attractiveness, feasibility, and other characteristics of the training program. Personal motives, background variables, and leadership climate factors were found to be related to attractiveness ratings. 6 social incentives from the original list were redesignated as social behaviors. On the basis of the questionnaire and administrative assessments of feasibility data, 18 additional incentives (both social and nonsocial) are proposed for use in a field experimental situation.—*Journal abstract*.

Personnel Evaluation & Performance

11113. Beatty, Richard W. (U Colorado, Graduate School of Business Administration) **A two-year study of hard-core unemployed clerical workers: Effects of scholastic achievement, clerical skill, and self-esteem on job success.** *Personnel Psychology*, 1975(Sum), Vol 28(2), 165-173.—Studied the relationship of scholastic ability, clerical skills, and self-esteem to job success for 23 female hardcore unemployed clerical workers who had undergone a 6-wk training program. Clerical skill measured by the Minnesota Clerical Test was positively related to supervisors' ratings of job performance after 6 mo and again after 2 yrs on the job. Arithmetic ability was positively related and word-meaning ability was negatively related to weekly earnings after 2 yrs' employment. Both abilities were measured by the Stanford Achievement Test. Self-esteem, measured by the Rosenberg and DeCharms Self-Esteem Scale, was not significantly related to any measure of job success.—J. McKillip.

11114. Bigoness, William J. (U Maine, Coll of Business Administration, Orono) **Effect of applicant's sex, race, and performance on employers' performance ratings: Some additional findings.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 80-84.—Studied the effect of ratee sex and race on rater evaluation when objective performance standards were established. 60 White male undergraduates in a personnel management course were assigned the role of grocery store manager and viewed a film depicting the performance of 8 stock room employees representing 4 sex-race combinations. Results indicate that Ss were able to distinguish clearly between high and low performers. Sex and race bias was found, however, even when objective performance standards had been implemented. While low-performing males and low-performing females were rated nearly identically, high-performing females were rated significantly higher than high-performing males. Low-performing Blacks were rated significantly higher than low-performing Whites. No significant difference was found between the Ss' ratings of high-performing Blacks and Whites. 11117. Foley, John P. **Criterion referenced measures of technical proficiency in maintenance activities.** *US AFHRL Technical Report*, 1975(Oct), No 75(61), 10 p. —Describes the model battery of 48 criterion referenced job task performance tests (JTPT) which was developed to cover all key maintenance activities at an air force base and to serve as criterion tests for the validation of paper and pencil symbolic substitute tests. During the development of these tests, many factors were considered, including the identification and classification of tasks to be measured, the hierarchical relationship of maintenance tasks, the most effective order of their measurement, and the ease of test administration. The requirements for additional refinement and validation for various graphic tests are discussed, and suggestions are made for the application of criterion referenced JTPT for the improvement of maintenance efficiency.—*Journal abstract*.

11119. Johnson, George A. (U Connecticut) **The relative efficacy of stimulus versus reinforcement control for obtaining stable performance change.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 321-341.—Reinforced 108 male undergraduates for high speed performance during a preliminary conditioning period. Half the Ss then received a persuasive influence regarding quality, and all Ss completed attitude measures. Finally, all Ss performed experimentally and were either reinforced for quality or for quantity. In 1 condition, reinforcement for quality was announced prior to the 1st experimental trial. Results show that Ss' attitudes toward quality were not altered by the persuasive influence, and neither the persuasive influence nor the announcement of reinforcement for quality produced any immediate or longer-run effects on Ss' performances. At final performance levels, however, quality was significantly higher and quantity significantly lower for Ss who had been reinforced for quality rather than quantity. Results suggest that (a) stimulus control treatments such as announcements and influences are relatively weak if they oppose previous conditioning that occurred in the same situation or if they conflict with an active reinforcer, (b) reinforcement control is necessary for stable performance change to occur, and (c) under some circumstances, reinforcement control alone may be sufficient to produce stable performance change. (23 ref)—*Journal abstract*.

11121. Lambert, John D. (U Michigan) **An analysis of selected personality and intelligence factors as predictors of the desirability of selected office workers to their supervisors.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6534-6535.

11122. Long, George E. & Varney, Nicholas C. (McDonnell Douglas Astronautics Co, St Louis, MO) **Automated pilot aptitude measurement system.** *US AFHRL Technical Report*, 1975(Sep), No 75-58, 76 p.—A study with 178 candidates in undergraduate pilot training (UPT) who were administered the Automated Pilot Aptitude Measurement System indicates that the instrument could accurately predict the Ss' success in the training program. It is suggested that use of the instrument with existing pilot selection procedures could reduce current attrition rates in UPT. (23 ref)

11123. Nevo, Barukh. (U Haifa, Israel) **Using biographical information to predict success of men and women in the army.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 106-108.—Used personal data gathered by the Israeli Biographical Information Inventory to predict military success for 390 men and 524 women, aged 20-26. Each sex group was randomly divided into equal keying and replication samples. In the keying samples, correlations between biographical item responses and the criterion of military rank (when released from compulsory service) were examined. 13 items, scored on the basis of these correlations, were summed. These total scores were then correlated with the criterion. Significant positive correlations were found for both sex groups in both the keying and replication samples, although correlations for men were always significantly ($p < .05$) higher.—*Journal abstract*.

11126. Schriesheim, Chester A. & Stogdill, Ralph M. (Ohio State U) **Differences in factor structure across three versions of the Ohio State Leadership Scales.** *Personnel Psychology*, 1975(Sum), Vol 28(2), 189-206.—Investigated the factor structure of 3 tests: (a) Supervisory Behavior Description Questionnaire (SBDQ), (b) Leader Behavior Description Questionnaire (LBDQ), and (c) the revised Form XII Leader Behavior Description Questionnaire (LBDQ-XII) which were designed to measure the leadership dimensions of consideration and initiation structure. Responses of 230 hourly university employees to a 76-item questionnaire containing all items from the 3 tests were factor analyzed using varimax rotation and Wherry's (1959) hierarchical factor method. All scales had subgeneral factors labeled "Consideration" and the LBDQ and LBDQ-XII had subgeneral factors labeled "Initiating Structure." The SBDQ had 6 varimax factors, and the LBDQ and the LBDQ-XII had 1 each, which reflected punitive or arbitrary leader behaviors. The SBDQ had 2, and the LBDQ one, varimax factors involving production orientation. The comparative value of the 3 scales for measuring leader behaviors is discussed. (28 ref)—*J. McKillip*.

11128. Scott, William E. & Hamner, W. Clay. (Indiana U) **The influence of variations in performance profiles on the performance evaluation process: An examination of the validity of the criterion.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 360-370. —Investigated the effects of workers' actual performance on supervisory ratings of workers' ability, motivation, and overall performance. 10 male business students in each of 6 groups were randomly assigned as judges of a worker (confederate). Ratings made by judges of workers' total output were relatively unaffected by different worker performance patterns. High-variability workers were judged to be more able and less motivated than low-variability workers. Workers showing improvement were rated as more motivated than those whose pattern of performance was either random or deteriorating over time. Findings are discussed in terms of their implications for examining potential contamination by reducing the validity of the criterion test, as suggested by the standards of the American Psychological Association. 11136. Zedeck, Sheldon; Jacobs, Rick & Kafry, Ditsa. (U California, Berkeley) **Behavioral expectations: Development of parallel forms and analysis of scale assumptions.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 112-115.—Describes the development of parallel forms of behavioral expectation scales (BES) as well as a check on the adequacy of examples contributed as documentation for BES numerical evaluations. Data generated by O. Harari and S. Zedeck (see PA, Vol 51:11883) were used to develop 2 forms of BES, A and B. Results from 95 undergraduates indicate that the forms had, in general, equivalent dimension means and variances as well as the same degree of correlation with other variables (overall evaluation and satisfaction with the instructor). An independent sample of 56 students assessed 39 contributed examples provided to support actual evaluations. Results indicate high agreement between the original value and the independent assessments. The flexibility and increased use of the BES data are discussed.—*Journal abstract*.

Management & Management Training

11137. Anderson, Carl R. (U Maryland, Coll of Business & Management) **Coping behaviors as intervening mechanisms in the inverted-U stress-performance relationship.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 30-34.—Examined relationships among stress, coping behaviors, and performance for 93 owner-managers of small businesses damaged by hurricane floods. It was hypothesized that (a) perceived stress and performance display an inverted-U relationship, and (b) emotional coping mechanisms increase under higher stress. Ss were interviewed regarding their handling of critical incidents under stress and completed a subjective stress scale by H. H. Kerle and H. M. Bialek (1958). Type of recovery effort following the flood was recorded, organizational performance was rated on a 5-point scale, and final loss data were acquired. Perceived stress and organization performance displayed a curvilinear, nearly inverted-U relationship. Actual financial loss (or stress level) did not account for performance differences. Problem-solving coping behaviors revealed an inverted-U relationship with perceived stress, while emotional coping behaviors displayed a positive linear relationship.—*Journal abstract*.

11141. di Marco, Nicholas; Kuehl, Charles & Wims, Earl. (U Missouri, St Louis) **Leadership style and**

- interpersonal need orientation as moderators of changes in leadership dimension scores.** *Personnel Psychology*, 1975(Sum), Vol 28(2), 207-213.—Examined the relationship of leadership style and of interpersonal need orientation to changes in self-reported leadership dimensions for 467 1st- and 2nd-level supervisors in a manufacturing company who had taken a supervisory development training program. Style was measured by the Least Preferred Coworker scale (LPC), need orientation by the Fundamental Interpersonal Relations Orientation-Behavior subscales (FIRO-B), and the leadership dimensions of consideration and initiating structure by the Leadership Opinion Questionnaire (LOQ). Pre-post training changes in consideration were positively correlated with pretraining LPC and with the FIRO-B subscale scores except "Expressed Control" which showed a negative correlation. Pre-post training change in initiating structure showed a pattern of correlations with LPC and FIRO-B subscale scores exactly the opposite of the pattern of consideration change. Selection of prospective trainees in order to maximize effectiveness of training programs is discussed. (20 ref)—*J. McKillip*.
11142. **Duffy, John F.** (Iowa State U) **A within-subjects validity generalization of Fiedler's Contingency Model of Leadership.** *Dissertation Abstracts International*, 1974(Jan), Vol 34(7-B), 3548.
11143. **Frohman, Alan L. & Kotter, John P.** (Pugh-Roberts Assoc Inc, Cambridge, MA) **The joining-up process: Issues in effective human resource development.** *Training & Development Journal*, 1975(Aug), Vol 29(8), 3-7.—Describes problems of the initial management of new 1st level managers and professionals, and summarizes methods for solution. Mismatched expectations are prevented by early discussions using a structured format. Stifling of creativity is handled by identifying job constraints and coaching employees accordingly. Lack of managerial sensitivity is countered by offering a short course on how to manage the new employee. Inappropriate screening criteria are avoided by using a detailed checklist to specify abilities and behaviors required by the open job. Action steps of this kind have proved effective in supporting job satisfaction and in promoting productivity on the job.—*R. L. Sulzer*.
11144. **Grimsley, Glen & Jarrett, Hilton F.** (U Southern California) **The relation of past managerial achievement to test measures obtained in the employment situation: Methodology and results: II.** *Personnel Psychology*, 1975(Sum), Vol 28(2), 215-231.—Reports cross-validation of predictors of managerial achievement and a concurrent validation methodology for 2 samples of 50 top managers and 50 middle managers matched on age and education. Protocols for both samples were drawn from the assessment records of candidates for hire or promotion. Sample 1 has been described previously by G. Grimsley & H. Jarrett (see PA, Vol 51:2011). Test batteries which predicted pre-assessment managerial achievement in Sample 1 were cross-validated on Sample 2, while Sample 2 predictors were cross-validated on Sample 1. Little shrinkage was reported. Scores on predictive tests were correlated with age. The most important finding was that the more time middle managers spend in middle management, the more their scores resemble those of top managers of the same age.
- Advantages and disadvantages of this methodological approach are discussed.—*J. McKillip*.
11145. **Johnson, Raymond H.** (Michigan State U) **Initiating structure, consideration, and participative decision making: Dimensions of leader behavior.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6255.

11147. **May, William E.** (U Alabama) **Personality profile differences between military and civilian instructors in a service school.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6455.
11148. **Nair, T. Sukumaran.** (Cochin Shipyard, India) **Social skills and attitudes of managers: A comparative study of engineer and non-engineer managers with and without management education.** *Indian Manager*, 1974(Apr-Jun), Vol 5(2), 139-153.—Conducted a study with 160 engineer and nonengineer managers with and without management education or training to determine whether (a) there is a significant difference between engineer and nonengineer managers in social skills; (b) there is a correlation between age and social skills of individuals; and (c) management education had a significant impact on the social skill pattern of managers. Ss were administered a questionnaire that included items selected from the Thurstone Perceptual Tests and the MMPI; Ss were also questioned on management education and the desirability of top executives having technical backgrounds. Results show that engineer managers tended to be more performance- than relationship-oriented. There was significant difference between managers without management education and managers with management education in their attitude toward management program and training; Ss' responses were polarized on the basis of professional background in response to statements regarding who the top man should be in an industrial undertaking.—*M. E. Pounsel*.
11149. **Renwick, Patricia A.** (U California, Graduate School of Administration, Irvine) **Impact of topic and source of disagreement on conflict management.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 416-425.—Conducted a field survey in 2 manufacturing firms of 72 employees' responses to a variety of topics and sources of interpersonal conflict. Topics were taken from the Employee Conflict Inventory, administered as part of a larger study. Observations of significant Topic \times Method and Source \times Method interactions indicated that conflict management was to some extent dependent on the specific nature of the disagreement. Correlational evidence suggested that behavioral predispositions also played a major role in shaping reactions to conflict. Results are interpreted and discussed in terms of response hierarchies and within the context of organizational climate.—*Journal abstract*.
11150. **Sank, Lawrence I.** (Rutgers State U) **Perceived trait-co-occurrences according to managerial role: A structural representation.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 189-200.—Presented 58 middle managers from a large corporation with 3 checklists

containing effective and ineffective managerial traits previously obtained as free responses from another sample of middle managers. Each manager in the present study was asked to describe a superior, a peer, and a subordinate. Multidimensional scaling solutions were then calculated from these checklist data. Ratings, obtained on 5 properties, were used to interpret the solutions. Findings demonstrate that managers in a highly competitive organization having frequent, formalized evaluative procedures (a) ascribe high negative attributes to those peers perceived as effective and (b) have relatively undifferentiated views of their ineffective peers and ineffective subordinates but not their superiors who are viewed critically whether effective or ineffective. —*Journal abstract.*

(Pfizer Corp, New York, NY) **Main springs of change: On being Orientally oriented.** *Training & Development Journal*, 1975(Aug), Vol 29(8), 41-50.—Compares the management of change in America and Japan, and concludes that the Japanese have a more systematic, parsimonious, and effective method.—R. L. Sulzer.

Organizational Behavior & Job Satisfaction

11154. Arvey, Richard D.; Dewhirst, H. Dudley & Boling, John C. (U Tennessee, Knoxville) **Relationships between goal clarity, participation in goal setting, and personality characteristics on job satisfaction in a scientific organization.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 103-105.—Studied the impact of 2 attributes of task goals (goal specificity and participation in goal setting) on employee satisfaction with 271 scientists and engineers (mean age, 46.5 yrs). The moderating influences of 3 personality variables as measured by the Adjective Check List were also determined. Ss were blocked into 3 levels on both a Goal Clarity-Planning factor and a Participation in Goal Setting factor based on a factor analysis of items reflecting employee perceptions of how their supervisors manage. Ss were also divided into high and low levels of need for achievement, autonomy, and affiliation. Analyses of variance indicated that Goal Clarity Planning and Participation in Goal Setting were factors linearly and positively related to satisfaction, as were all 3 personality variables. —*Journal abstract.*

11155. Beehr, Terry A. (Illinois State U) **Perceived situational moderators of the relationship between subjective role ambiguity and role strain.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 35-40.—Examined situational moderators of the relationship between 1 organizational stress, role ambiguity, and 4 psychological strains: job dissatisfaction, life dissatisfaction, low self-esteem, and depressed mood. Three situational characteristics were hypothesized to moderate the relationship

by reducing its strength: group cohesiveness, supervisor support, and autonomy. 651 adults in 5 midwestern work organizations were given 90-min structured interviews in their homes. Group cohesiveness moderated the relationship between role ambiguity and 2 of the role strains, but the direction of its moderating influence was inconsistent. Supervisor support showed a nonsignificant tendency to reduce the strength of the relationship between role ambiguity and role strain. Autonomy significantly moderated the relationship in the expected direction. —*Journal abstract.*

11156. Beehr, Terry A.; Walsh, Jeffrey T. & Taber, Thomas D. (Illinois State U) **Relationships of stress to individually and organizationally valued states: Higher order needs as a moderator.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 41-47.—Data from 79 male and 64 female members of a white-collar union employed in drafting, mechanical, and technical-clerical jobs in a midwestern manufacturing company show that some effects of role stresses on individually valued states were incompatible with their effects on 3 organizationally valued motivational states: involvement, effort toward quantity, and effort toward quality. Specifically, role overload was correlated positively with organizationally valued outcomes, but also with 3 adverse individual outcomes: job dissatisfaction, fatigue, and tension. Two other role stresses, role ambiguity and nonparticipation, had adverse effects on both individually and organizationally valued psychological states. Relationships between role stresses and individually valued outcomes were moderated by higher order need strength. (21 ref) —*Journal abstract.*

Cases and commentary.** New York, NY: Free Press, 1975. xi, 387 p. —Presents 15 case studies and abstracts of other cases of innovations in the organization of work, job content, and the roles of workers in various production and service industries. An introductory comment on assessment procedures in the field of work, the status of the case as a scientific approach, and reports of a task force on comparability and evaluation are included.

11163. Goodfellow, Reginald A. (Bowling Green State U) **A multivariate analysis of the determinants of satisfaction with work and retirement.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4105-4106.

11164. Goodman, Paul & Salipante, Paul. (Carnegie-Mellon U, Graduate School of Industrial Administration) **Organizational rewards and retention of the hard-core unemployed.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 12-21.—Studied the relationship between 4 organizational rewards (pay, job status, promotion, and job security) and the retention of the hard-core unemployed (HCU), using data from 114 firms involved in hiring the HCU. The level of pay and the structure of raises positively affected retention, as did promotional opportunities (the percentage of minority members in supervisory positions). In firms with primarily minority members in the work force, the greater the percentage of minority supervisors the higher the HCU retention, but in primarily White firms the opposite relationship occurred. Job status and job security also were related to retention. Based on the relative effects of program characteristics (e.g., training) and organization characteristics (e.g., pay), recommendations are made for increased emphasis on organizational factors in developing strategies for employing the HCU.—*Journal abstract*.

11165. Gross, Edward. (U Washington, Seattle) **Patterns of organizational and occupational socialization.** *Vocational Guidance Quarterly*, 1975(Dec), Vol 24(2), 140-149.—Describes the process of adult socialization into organizational membership, using illustrations from wide-ranging psychological and sociological studies. In joining organizations, individuals are expected (a) to master the skills and strategies useful to organizational goals, (b) to acquire new self-images, (c) to enter into new personal involvements and to abandon old ones, and (d) to adopt organizational values. Discussion of organizational selection questions the extent to which organizations socialize their members or select applicants who already possess the preferred characteristics. A 4-process model of socialization is proposed, and issues requiring further investigation are presented, including the articulation of childhood with adult socialization. (35 ref)—C. A. Heikkinen.

11166. Haccoun, Robert R. (Ohio State U) **Mandate base and evaluation source as determiners of negotiator behavior.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4106.

11167. Kim, Jay S. & Hammer, W. Clay. (Northwestern U, Graduate School of Management) **Effect of performance feedback and goal setting on productivity and satisfaction in an organizational setting.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 48-57.—Used a quasi-experimental design to investigate the effect of evaluative and nonevaluative feedback and goal setting on performance and satisfaction of 113 40-60 yr old blue-collar unionized workers in a large telephone company. Three experimental groups received either extrinsic feedback, intrinsic feedback, or extrinsic and intrinsic feedback in addition to goal setting, while a 4th group received only goal-setting instructions. Three objective performance measures (cost performance, absenteeism, and safety) and 1 subjective performance measure (service) were used to assess productivity, and the Job Description Inventory was given as a pre- and posttest measure of satisfaction. Results show that it is possible for goal setting alone to enhance performance without a formal-knowledge-of-results program and thus yield external validity for E. A. Locke's (1970) theory of goal setting. However, when evaluative and nonevaluative feedback was added to a goal-setting program, performance was generally enhanced beyond that found in the goal-setting-only group. 11168. Lofquist, Lloyd H. & Dawis, René V. (U Minnesota) **Vocational needs, work reinforcers, and job satisfaction.** *Vocational Guidance Quarterly*, 1975(Dec), Vol 24(2), 132-139.—Describes the Minnesota Theory of Work Adjustment as a means of understanding and investigating job satisfaction. The theory emphasizes the mutual ability of the worker and the work environment to meet each other's requirements by focusing on work-reinforcers in jobs, individual worker-reinforcer preferences or vocational needs, patterns of reinforcers available in different occupations, and the relationship between specific job satisfactions and work-reinforcers. Instruments developed to measure aspects of the theory are described, and implications of the theory for counseling, job structure, public policy, program development, and research are discussed. (23 ref)—C. A. Heikkinen.

11169. Newman, John E. (State Farm Insurance Co, Bloomington, IL) **Understanding the organizational structure-job attitude relationship through perceptions of the work environment.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 371-397.—Administered a 3-part questionnaire, a job involvement measure, and the Job Descriptive Index to 710 insurance company employees to study the efficacy of personal and organizational characteristics in accounting for employee job attitudes. The utility of using the perceived work environment to study the relationship between organizational structure and employees' affective reactions was also tested. Discriminant analyses indicated that job attitudes were related to both personal and organizational characteristics but most strongly to the organizational structure characteristics. Canonical correlation analyses indicated that the organizational

structure characteristics were referencing important employee organizational experiences. These experiences were more strongly related to characteristics of the employee's location in the organization than to his personal characteristics. It is concluded that employees in different locations in the organizational space perceived the work environment differently. Therefore, perceived work environment can be construed as an intervening variable that can be used to understand the relationship between organizational structure characteristics and job attitudes.—*Journal abstract.*

11170. O'Reilly, Charles A. & Roberts, Karlene H. (U California, School of Public Health, Berkeley) **Relationships among components of credibility and communication behaviors in work units.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 99-102.—Assessed relationships between 3 dimensions of source credibility (safety, expertise, and dynamism) and communication behaviors in organizational units. 110 employees of 20 general medical care practices returned surveys by mail (90% response rate), which assessed (a) credibility (a bipolar checklist asking Ss to describe their information milieu); (b) perceived information accuracy and communication openness in work units (10 items asking extent of agreement or disagreement); and (c) sociometric information (Ss' descriptions of the frequency, type, and quantity of interactions with others). Units characterized by high credibility showed significantly higher perceptions of information accuracy and communication openness and of interaction rates, although the credibility dimensions displayed some differential relationships.—*Journal abstract.*

11171. Patten, Thomas H. & Fraser, Karen L. (Michigan State U, School of Labor & Industrial Relations) **Using the organizational rewards system as an OD lever: Case study of a data-based intervention.** *Journal of Applied Behavioral Science*, 1975(Oct-Dec), Vol 11(4), 457-474. Findings suggest that rewards system interventions can be fruitful, that the greatest rewards are often perceived by managerial and professional employees as inherent in the work itself, and that improvements in the tools for studying the functions and dysfunctions of rewards systems are needed. 11174. Sims, Henry P. & Szilagyi, Andrew D. (Indiana U, Graduate School of Business) **Leader reward behavior and subordinate satisfaction and performance.** *Organizational Behavior & Human Performance*, 1975(Dec), Vol 14(3), 426-438.—Collected questionnaire data from 1,161 paramedical and support personnel to study the hypothesis that leader reward behavior has a direct relationship to subordinate performance and satisfaction. It was found that, in a hospital environment,

leader reward behavior was factorable into 2 components: positive reward behavior and punitive reward behavior. The relationships between each component of leader reward behavior and subordinate satisfaction and performance was studied across 4 main classifications of occupational skills: administrative, professional, technical, and service. Consistent positive relationships across the 4 skill groups were found between positive reward behavior and subordinate satisfaction. The relationships between punitive reward behavior and subordinate satisfaction and performance were different, however, among the groups. It is proposed that variations in the findings from skill group to skill group may be due in part to the nature of the task performed by each group. (27 ref)—*Journal abstract.*

11175. Stone, Eugene F. (Oakland U, School of Economics & Management) **Job scope, job satisfaction, and the Protestant Ethic: A study of enlisted men in the U.S. Navy.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 215-224.—Obtained questionnaire data from 149 US Navy enlisted men with a mean age of 24 yrs. The job scope (JS)-satisfaction with the work itself (SWI) relationship was examined for the study's total sample and for subsamples created by grouping individuals on the basis of their degree of belief in the Protestant Ethic (PE). It was hypothesized and found that the JS-SWI relationship was positive and significantly different from zero for the study's total sample and each of the 3 PE subsamples. Contrary to 1 of the study's hypotheses, PE did not moderate the JS-SWI relationship. Results are discussed in terms of their implications for theory and practice in the area job design. 11178. Wanous, John P. (New York U, Graduate School of Business Administration) **Organizational entry: From naive expectations to realistic beliefs.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 22-29.—Monitored perceptions of organizational and job characteristics as individuals joined new organizations, a transition in status from outsider to newcomer to insider. Questionnaire data on job expectations, actual job, and satisfaction (Minnesota Satisfaction Questionnaire) were obtained from a cross-sectional study of 283 master of business administration (MBA) students entering 3 different schools and from a longitudinal study of 46 female newly entering telephone operators. A distinction between intrinsic and extrinsic organizational characteristics was suggested by factor analysis, and these 2 factors were analyzed separately. The MBA data clearly show a decline from naive expectations to lower realistic beliefs for the intrinsic but not the extrinsic factor. Similar, but not as strong, results were found for the telephone operators. The decline in intrinsic expectations was greater for the insiders than the newcomers. (29 ref)—*Journal abstract.*

11180. Weed, Stan E.; Mitchell, Terence R. & Moffitt, Weldon. (U Washington, Seattle) **Leadership style, subordinate personality, and task type as predictors of performance and satisfaction with supervision.** *Journal of Applied Psychology*, 1976(Feb), Vol 61(1), 58-66.—Investigated interactions between leadership style, subordinate personality, and task type, and the effects of different combinations of these variables on group performance and satisfaction with supervision. Three different types of leaders ($N = 48$) were selected from 500 male undergraduates using Troidahl and Powell's short-form Dogmatism Scale: (a) high in human relations and high in task orientation, (b) low in human relations and high in task orientation, and (c) high in human relations and low in task orientation. Each leader worked with 8 high- and 8 low-dogmatism Ss on 4 tasks that differed in ambiguity and difficulty. As predicted, there were significant interaction effects for Leader \times Subordinate \times Task combinations. These effects on group performance were strongest for difficult-ambiguous tasks. Subordinates, regardless of their personality, were significantly more satisfied with leadership behavior that was high in human relations orientation. (25 ref)—*Journal abstract*.

BRIEF SUBJECT INDEX

Entries in the Brief Subject Index are derived from a 4,000-term *Thesaurus of Psychological Index Terms*. Only those terms representing subject matter content covered in this monthly issue are listed. A thesaurus term missing from the listing indicates that no material of major relevance to the concept is included in the issue. Records are indexed at the level of specificity contained in each document. Each index entry also refers the reader to more specific concepts related to each term. Thus, a reader interested in articles concerning childhood psychosis may find additional relevant information under "early infantile autism."

BRIEF SUBJECT INDEX

- Aged** 8957, 9204, 9291, 9377, 9395, 9397, 9421, 9500, 9528, 9559, 9561, 9564, 9618, 9632, 9791, 9950, 10022, 10032, 10115, 10433, 10434, 10513
- Agencies (Groups)** [See Organizations]
- Aggressive Behavior** [See Also Animal Aggressive Behavior, Attack Behavior, Conflict, Riots, Violence, War] 8982, 9325, 9483, 9513, 9533, 9696, 9714, 9716, 9765, 9773, 9783, 9787, 9796, 9802, 9901, 9904, 9905, 10011, 10022, 10023, 10043, 10242, 10243, 10318, 10339, 10895
- Aggressiveness** 8982, 9759, 10806
- Aging (Physiological)** [See Physiological Aging]
- Agitated Depression** [See Depression (Emotion)]
- Agonistic Behavior** [See Aggressive Behavior]
- Agricultural Workers** [See Migrant Farm Workers]
- Air Force Personnel** 10462, 11084, 11087, 11100, 11111, 11117, 11122, 11129, 11161
- Air Traffic Control** 11091
- Aircraft** 11184
- Aircraft Pilots** 11087, 11094, 11096, 11097, 11098, 11112, 11122
- Airplane** [See Aircraft]
- Akinesia** [See Apraxia]
- Alarm Responses** 9016, 9082
- Alcohol Drinking Attitudes** 9595
- Alcohol Drinking Patterns** [See Also Problem Drinking, Social Drinking] 9291, 9566, 9595, 9670, 9684, 10014, 10017, 10024, 10032, 10037
- Alcohol Intoxication** 9687, 10016, 10103, 10467, 10557
- Alcoholic Beverages** 9291
- Alcoholic Hallucinoses** [See Korsakoffs Psychosis]
- Alcoholic Psychosis** [See Korsakoffs Psychosis]
- Alcoholics Anonymous** 9998
- Alcoholism** [See Also Korsakoffs Psychosis] 9884, 9988, 9998, 10004, 10006, 10010, 10017, 10030, 10031, 10036, 10037, 10364, 10467, 10495, 10515, 10541, 10550, 10551, 10554, 10556
- Alcohols** [See Also Ethanol, Propanolol, Tetrahydrocannabinol] 9244, 9255, 9256, 9257, 9264, 9284, 9301, 9316, 9677
- Alexia** [See Aphasia]
- Algebra** [See Mathematics Education]
- Alienation** 9676, 9707, 9909, 10836, 10901, 10926, 10956, 11198
- Alkaloids** [See Apomorphine, Atropine, Morphine, Nicotine, Scopolamine]
- Alpha Rhythm** 9106, 9132, 9138, 9145, 9172, 9179, 9182, 10178
- Alphabets** [See Letters (Alphabet)]
- Altitude Effects** 9154, 9570
- Altruism** 9501, 9547, 9559, 9741, 9755, 9797, 9803, 9815, 9846, 9885
- Ambiguity (Stimulus)** [See Stimulus Ambiguity]
- Ambiguity (Tolerance)** [See Tolerance For Ambiguity]
- Ambivalence** 9767, 9947, 9975
- Amentia** [See Mental Retardation]
- American Indians** 9408, 9481, 9569, 9595, 10821, 10940, 11002, 11086
- Amine Oxidase Inhibitors** [See Lysergic Acid Diethylamide]
- Amine Oxidases** [See Monoamine Oxidases]
- Amines** [See Also Amitriptyline, Amphetamine, Atropine, Catecholamines, Chlordiazepoxide, Dextroamphetamine, Dopamine, Epinephrine, Imipramine, Methamphetamine, Methylphenidate, Norepinephrine, Phenoxylbenzamine, Puromycin, Scopolamine, Serotonin] 9282
- Amino Acids** [See Histidine, Methionine, Tryptophan]
- Amitriptyline** 10397
- Amnesia** 8996, 9052, 9213, 10016, 10125, 10128
- Amphetamine** 9245, 9254, 9277, 9303, 9304, 9311, 9312, 10396, 10421
- Amphetamine (D-)** [See Dextroamphetamine]
- Amphetamine (DI-)** [See Amphetamine]
- Amphetamine Sulfate** [See Amphetamine]
- Amphibia** [See Frogs]
- Ampulets** 10366
- Amygdaloid Body** 9108, 9221, 9224, 9278, 9314, 9315
- Anagram Problem Solving** 8814
- Analgesic Drugs** [See Also Atropine, Methadone, Morphine, Scopolamine] 9241, 9272, 9273, 9286, 10410
- Analysis of Covariance** 8677, 8687, 11004
- Analysis of Variance** 8615, 8676, 8680, 8682, 10252, 11200
- Analysts** [See Psychoanalysts]
- Analytical Psychotherapy** 10183, 10231
- Ancestors** [See Parents]
- Androgens** 9190
- Anesthesia (Feeling)** 9338, 9919
- Anesthetic Drugs** [See General Anesthetics, Pentobarbital]
- Anger** [See Also Hostility] 9787, 10024, 10536
- Angst** [See Anxiety]
- Anguish** [See Distress]
- Animal Aggressive Behavior** [See Also Attack Behavior] 9015, 9061, 9071, 9073, 9190, 9278, 9299, 9533
- Animal Behavior** [See Animal Ethology]
- Animal Biological Rhythms** [See Also Animal Circadian Rhythms] 9015, 9076
- Animal Breeding** [See Also Selective Breeding] 9013, 9074, 9087, 9261, 9301
- Animal Circadian Rhythms** 9012, 9229, 9235
- Animal Communication** 9063, 9330
- Animal Dominance** 9061, 9073, 9083, 9190
- Animal Drinking Behavior** 9189, 9221, 9232, 9237, 9249
- Animal Environments** 9015, 9065, 9075, 9159
- Animal Ethology** [See Also Animal Aggressive Behavior, Animal Biological Rhythms, Animal Circadian Rhythms, Animal Communication, Animal Dominance, Animal Drinking Behavior, Animal Exploratory Behavior, Animal Feeding Behavior, Animal Hoarding Behavior, Animal Innate Behavior, Animal Instinctive Behavior, Animal Mating Behavior, Animal Sexual Receptivity, Animal Sexual Behavior, Animal Social Behavior, Animal Vocalizations, Attack Behavior, Impinging, Nest Building] 9011, 9068, 9072, 9075, 9159, 9220
- Animal Exploratory Behavior** 9060, 9227
- Animal Feeding Behavior** 9063, 9189, 9193, 9218, 9220, 9221, 9226, 9232, 9271, 9283
- Animal Hoarding Behavior** 9235
- Animal Innate Behavior** 9065, 9201
- Animal Instinctive Behavior** 9067, 9070, 9081
- Animal Maternal Behavior** 9065, 9069, 9074, 9077, 9191
- Animal Mating Behavior** [See Also Animal Sexual Receptivity] 9063, 9064, 9068, 9074, 9081, 9236
- Animal Motivation** 9022, 9033, 9039, 9055, 9057, 9071, 9218, 9226
- Animal Open Field Behavior** 9065, 9198, 9224, 9232, 9234, 9309
- Animal Sex Differences** 9019, 9073, 9235, 9301
- Animal Sexual Receptivity** 9078
- Animal Social Behavior** [See Also Animal Aggressive Behavior, Animal Communication, Animal Dominance, Animal Maternal Behavior, Animal Mating Behavior, Animal Sexual Receptivity, Attack Behavior] 9015, 9066, 9069, 9072, 9073, 9076, 9077, 9083, 9084, 9224, 9232, 9253
- Animal Strain Differences** [See Animal Breeding, Genetics]
- Animal Vocalizations** 9016, 9070
- Animals** [See Also Related Terms] 9053, 9317
- Animism** 9443
- Anodynes** [See Analgesic Drugs]
- Anomie** [See Alienation]
- Anorexia Nervosa** 9245, 10151, 10155, 10161, 10388
- Anorexigenic Drugs** [See Appetite Suppressing Drugs]
- ANOVA (Statistics)** [See Analysis of Variance]
- Antagonism** [See Hostility]
- Anthropologists** 9540, 10475
- Antibiotics** [See Also Cycloheximide, Penicillins, Puromycin] 9272
- Antibodies** 10160
- Anticholinergic Drugs** [See Cholinergic Blocking Drugs]
- Anticonvulsive Drugs** [See Also Pentobarbital, Phenobarbital] 10418
- Antidepressant Drugs** [See Also Amitriptyline, Imipramine, Lithium Carbonate, Methylphenidate, Pheniprazine] 9260, 9278, 10397, 10398, 10403, 10449
- Antiemetic Drugs** [See Sulpuride]
- Antiepileptic Drugs** 9276, 9292, 10419
- Antihypertensive Drugs** [See Methylodopa, Pargyline, Phenoxylbenzamine]
- Antipsychotic Drugs** 10400, 10411
- Antisocial Behavior** [See Also Child Abuse, Crime, Homicide, Juvenile Delinquency, Recidivism, Runaway Behavior, Shoplifting, Theft] 9475, 9491, 9530, 9778, 9841, 10012, 10044, 10340, 10351
- Antisocial Personality** 10025, 10041, 10042, 10045, 10344
- Antispasmodic Drugs** [See Atropine]
- Ants** 9082
- Anxiety** [See Also Anxiety Neurosis, Separation Anxiety] 8702, 8894, 8974, 8983, 8989, 8993, 8994, 9000, 9168, 9172, 9175, 9176, 9339, 9580, 9589, 9624, 9703, 9716, 9750, 9753, 9785, 9802, 9810, 9824, 9847, 9848, 9879, 9883, 9903, 9953, 10013, 10178, 10245, 10265, 10283.

- Cognitive Contiguity** 8846
- Cognitive Development** [See Also Intellectual Development, Language Development, Perceptual Development] 9381, 9386, 9388, 9389, 9391, 9395, 9398, 9400, 9401, 9402, 9408, 9410, 9415, 9416, 9418, 9421, 9423, 9429, 9430, 9435, 9437, 9438, 9440, 9443, 9445, 9446, 9452, 9456, 9460, 9461, 9464, 9468, 9473, 9546, 9964, 10075, 10464, 10634, 10727, 10760, 10833
- Cognitive Discrimination** 8860, 8905, 8930, 9887, 9461, 9997, 10047, 10065
- Cognitive Dissonance** 8846, 9689, 9697, 9698, 9754, 9780, 9787, 9791, 10544, 10716, 10792, 11055, 11206
- Cognitive Mediation** 8804, 8864, 8873, 8896, 8928, 8933, 8953, 9388, 9419, 9813, 9848, 10078
- Cognitive Processes** [See Also Abstraction, Anagram Problem Solving, Associative Processes, Choice Behavior, Classification (Cognitive Process), Cognitive Contiguity, Cognitive Discrimination, Cognitive Mediation, Concept Formation, Connotations, Contextual Associations, Decision Making, Divergent Thinking, Group Problem Solving, Imagination, Inductive Deductive Reasoning, Inference, Logical Thinking, Management Decision Making, Problem Solving, Reasoning, Semantic Generalization, Thinking, Transposition (Cognition)] 8589, 8698, 8716, 8735, 8767, 8802, 8818, 8819, 8821, 8823, 8824, 8827, 8828, 8833, 8836, 8839, 8840, 8845, 8852, 8854, 8855, 8876, 8885, 8890, 8903, 8916, 8920, 8958, 8978, 8985, 9115, 9131, 9337, 9396, 9397, 9413, 9420, 9459, 9706, 9725, 10114, 10127, 10128, 10548, 10669, 10749, 10858, 11205
- Cognitive Style** [See Also Cognitive Complexity] 8702, 8804, 8809, 8846, 8856, 8898, 9406, 9421, 9515, 9825, 9891, 9932, 9997, 10768, 10859, 10864, 10871, 10875, 10893, 10920, 10950
- Cohesion (Group)** [See Group Cohesion]
- Coltus (Animal)** [See Animal Mating Behavior]
- Cold Effects** 8805, 9007, 9158
- Collaboration** [See Cooperation]
- Collective Behavior** [See Also Riots] 9742
- College Academic Achievement** 10712, 10728, 10750, 10766, 10796, 10802, 10843, 10845, 10851, 10856, 10860, 10898, 10913, 11009, 11019, 11031, 11034, 11045, 11046
- College Degrees** [See Educational Degrees]
- College Environment** 9979, 10856, 10938
- College Major** [See Academic Specialization]
- College Students** [See Also Community College Students, Graduate Students, Junior College Students, Medical Students] 8643, 8815, 9270, 9512, 9517, 9524, 9536, 9574, 9656, 9657, 9663, 9669, 9676, 9747, 9826, 9887, 9890, 9979, 9988, 10247, 10347, 10380, 10453, 10609, 10680, 10728, 10732, 10748, 10750, 10754, 10796, 10802, 10806, 10817, 10826, 10834, 10836, 10841, 10845, 10851, 10856, 10860, 10887, 10891, 10893, 10894, 10898, 10899, 10911, 10912, 10913, 10916, 10920, 10923, 10928, 10930, 10935, 10938, 10959, 10964, 10997, 11000, 11006, 11007, 11009, 11014, 11015, 11017, 11018, 11022, 11023, 11026, 11027, 11028, 11031, 11034, 11054, 11070, 11072
- College Teachers** 9553, 10665, 10668, 10684, 10704, 10705, 10708
- Colleges** 10453, 10828, 10976, 11056
- Colon Disorders** [See Fecal Incontinence]
- Color** [See Also Achromatic Color] 8704, 8732, 8768, 8999, 9091, 9124, 11184
- Color Perception** 8757, 8765, 8768, 8781, 8784, 8930, 9570, 10088
- Commitment (Psychiatric)** 9640, 9643
- Communes** [See Also Kibbutz] 9584
- Communication (Privileged)** [See Privileged Communication]
- Communication (Professional)** [See Scientific Communication]
- Communication Skills** 9488, 9489, 10149, 10312, 10721
- Communication Systems** 10734
- Communication Theory** 9326
- Communication** [See Also Related Terms] 9533, 9704, 10791
- Communications Media** [See Also Audiotapes, Audiovisual Communications Media, Books, Educational Audiovisual Aids, Film Strips, Mass Media, Motion Pictures, Motion Pictures (Educational), Photographs, Printed Communications Media, Telephone Systems, Television, Television Advertising, Videotapes] 11202, 11206
- Communities** [See Also Communes, Kibbutz] 9529, 9636, 11197
- Community Attitudes** 9526, 10550, 10734
- Community College Students** 10624, 10903
- Community Colleges** [See Colleges]
- Community Facilities** [See Also Community Mental Health Centers, Housing, Shopping Centers] 9626, 10469, 10471, 10474, 10479
- Community Mental Health** 10463, 10468, 10558
- Community Mental Health Centers** 10201, 10454, 10458, 10462, 10470, 10475, 10477, 10594
- Community Mental Health Training** 10469
- Community Psychiatry** 10456, 10457, 10460
- Community Services** [See Also Home Visiting Programs, Hot Line Services, Public Health Services] 9526, 9626, 9644, 10443, 10461, 10466, 10467, 10471, 10500, 10545
- Comparative Psychology** 9068, 9080, 9129, 9330
- Compatibility (Interpersonal)** [See Interpersonal Compatibility]
- Competition** 9376, 9727, 9739, 9740, 9753, 9796, 10357
- Complex (Oedipal)** [See Oedipal Complex]
- Complexity (Cognitive)** [See Cognitive Complexity]
- Complexity (Stimulus)** [See Stimulus Complexity]

BRIEF SUBJECT INDEX

- Complexity (Task)** [See Task Complexity]
- Compliance** 9689, 9697, 9698, 9705, 9754, 9778, 9780, 9789, 9813, 10376, 10434, 11013
- Comprehension** [See Also Listening Comprehension, Reading Comprehension, Sentence Comprehension] 9440, 10744
- Comprehension Tests** 8654
- Compressed Speech** 10761, 10786
- Computer Applications** [See Also Computer Assisted Instruction, Computer Simulation] 8624, 8630, 8661, 10177, 10533, 11054, 11122
- Computer Assisted Instruction** 10733, 10753, 10772, 10784, 10822, 10823, 11087
- Computer Programs** [See Computer Software]
- Computer Simulation** 8608, 10733
- Computer Software** 8603, 10733, 11185
- Concept (Self)** [See Self Concept]
- Concept Formation** 9153, 9437, 9452, 9456, 9586, 10134, 10159
- Concept Learning** [See Also Reversal Shift Learning] 8803, 8808, 8833, 8842, 8858, 8901, 8911, 8922, 8924, 8930, 8961, 9396, 9400, 9449, 9459, 10675, 10823, 10840, 10994
- Concepts** 8863, 9468, 9534, 10075
- Conceptual Imagery** 8772
- Conceptualization** [See Concept Formation]
- Conditioned Emotional Responses** 9040
- Conditioned Reflex** [See Conditioned Responses]
- Conditioned Responses** [See Also Conditioned Emotional Responses, Conditioned Suppression] 8888, 9025, 9030, 9041, 9059, 9109, 9165, 9187, 9205, 9206, 9215, 9230, 10070
- Conditioned Stimulus** 8877, 8981, 9040, 9043, 9058, 9099
- Conditioned Suppression** 8969, 9058
- Conditioning** [See Also Avoidance Conditioning, Classical Conditioning, Conditioned Emotional Responses, Conditioned Responses, Conditioned Stimulus, Conditioned Suppression, Escape Conditioning, Operant Conditioning, Unconditioned Stimulus] 8936, 9055, 9317, 9926
- Conditioning (Avoidance)** [See Avoidance Conditioning]
- Conditioning (Classical)** [See Classical Conditioning]
- Conditioning (Escape)** [See Escape Conditioning]
- Conditioning (Operant)** [See Operant Conditioning]
- Conditioning (Verbal)** [See Verbal Learning]
- Conference Proceedings** 10559
- Confidence Limits (Statistics)** 8669
- Confidentiality of Information** [See Privileged Communication]
- Conflict** [See Also Riots, Violence, War] 8993, 8997, 9612, 9661, 9723, 9736, 9746, 9757, 10045, 10182, 10699, 11149, 11166
- Conflicts (Role)** [See Role Conflicts]
- Conformity (Personality)** 9487, 9686, 9708, 9749, 10581, 10784
- Congenital Disorders** 9919, 10130
- Conjoint Therapy** 10290
- Connotations** 9344
- Conscience** 9830, 9897
- Consciousness Disturbances** [See Also Autohypnosis, Hypnosis, Insomnia, Suggestibility] 9983
- Consciousness States** [See Also Attention, Awareness, Divided Attention, Monitoring, Selective Attention, Vigilance, Wakefulness] 9002, 9646, 10312
- Conservation (Concept)** 9396, 9424, 9442, 9473, 11039
- Conservatism** 8672, 8808, 9325
- Consonants** 8797, 9453
- Consultation (Professional)** [See Professional Consultation]
- Consumer Attitudes** 11199, 11202, 11203, 11207
- Consumer Behavior** 8986, 9712, 11199, 11201, 11202, 11203, 11204, 11205, 11206, 11207, 11209
- Consumer Research** [See Also Consumer Surveys] 11204
- Consumer Surveys** 11208
- Content Analysis (Test)** 9860
- Contextual Associations** 8777, 8883, 8916, 8931, 10863
- Contiguity (Cognitive)** [See Cognitive Contiguity]
- Contingency Management** [See Also Token Economy Programs] 9027, 10340, 10351, 10360, 10387, 10430, 10731, 10776, 10789, 10837, 10966, 10993
- Continuing Education** [See Higher Education]
- Continuous Reinforcement** [See Reinforcement Schedules]
